Hello all,

Hope you are having a good summer!

First, we want to extend our deepest appreciation to everyone who submitted comments on the five 2018 technical reports, list of historic properties, and project effect. We have spent the past month pouring over them to assure that your comments are understood and we are processing data associated with your materials. Individual replies, as appropriate, will be arriving soon.

Second, as discussed during our meetings in June, the next step will be to hold calls/meetings regarding mitigation to adversely effected resources and continue our discussion as warranted on historic properties and effects based on your feedback. As of now, we would like to have three calls/meetings: one to discuss resources in Northern Virginia and Fredericksburg, one to discuss resources in Central Virginia and Ashland, and one to discuss resources in Richmond. You are welcome to listen to/attend any or all of these meetings. Our goal is to hold them in the latter half of September. Additional information on time and date will be coming shortly.

Thanks again for your participation!
Kerri

Hello Consulting Parties,

Thank you for your continued input on the DC2RVA rail project. As we mentioned a few weeks ago, we have set three consulting party meetings in October to continue our dialogue on cultural resources along the project corridor. These meetings will include a general project update, discussion on historic properties and project effects, and dialogues on ways that any adverse effects can be mitigated. The focus of each meeting will be the general region where the meeting is held but all historic properties within the corridor are open for discussion.

October 4, 1:30pm-3:00pm= In-person meeting at Dovetail Cultural Resource Group in Fredericksburg (11905 Bowman Drive, Suite 502). A call-in number will also be available for those who cannot attend and distributed prior to the meeting.

October 5, 10:00am-11:30am= In-person meeting at Parsons in Washington, DC (100 M Street SE, Suite 1200). A call-in number will also be available for those who cannot attend and distributed prior to the meeting.

October 12, 10:00am-12:00pm= On-site meeting at Main Street Station in Shockoe Bottom, Richmond (1500 E. Main Street). Gather in the lobby. Since this is an on-site meeting and tour, no call-in number will be established. Note that additional groups outside of the formal consulting party roster have been invited to this meeting to assure participation from all vested parties.

We hope you are able to join us for one or more of these meetings. Please let me know if you can attend. If you are unable to participate, we also encourage written comments, which can be sent to me via email or standard mail at the Dovetail office. I am also always free for a call to discuss any ideas and issues you may want to share (540-899-9170). Emily Stock at DRPT (cc'd here) can address general project questions as well.

Hope to see you soon!

Kerri

Greetings all,

As an introduction, my name is Kerri Barile and I am the cultural resource lead for the Washington, DC to Richmond, Virginia (DC2RVA) rail project. The Virginia Department of Rail and Public Transportation (DRPT), the Federal Railroad Administration (FRA), and the project consultant team have been working on various studies associated with the rail expansion project since 2014. Cultural resource work has included archaeological and architectural reconnaissance studies and in-depth research to examine all facets of prehistory and history within the project impact area. All studies have been coordinated with the Virginia Department of Historic Resources, the Advisory Council on Historic Preservation, and more than 30 consulting groups and agencies who have a vested interest in this corridor.

As many of you know, studies in Richmond have focused on the potential use of Main Street Station as part of the expanded service. Shockoe Bottom has notable cultural significance for many reasons, including its association with the slave trade and the African-American experience in this area. Although discussions on this area have been ongoing since the project began, we would like to expand the dialogue through an on-site meeting to inform interested parties on current project plans and the status of cultural resource studies to date, and to garner feedback on aspects of this area that are most important to the community.
Your organization has been identified as a potential participant in this meeting, and we would like to invite you or another representative of your organization to attend. The meeting will be held on Friday, October 12 from 10:00am–12:00pm at Main Street Station (meet in the lobby at 1500 E. Main Street, Richmond). The agenda will include updates from the project team as well as a tour of proposed modifications to the rail system in this area.

Please let me know if you can attend. If you are unable to participate, we also encourage written comments, which can be sent to me via this email address or through standard mail at the address listed below. I am also always free for a call to discuss any ideas and issues you may want to share (540-899-9170). Emily Stock at DRPT (cc'd here) can address general project questions as well.

We hope you are able to join us!
Kerri

Good morning everyone,

A reminder to RSVP if you can attend one of the upcoming consulting party meetings in person or via telephone. See email below for more info. Fredericksburg is this Thursday, October 4th, and DC is this Friday, October 5th. Both of these will have both in-person and call-in options.

Call In: 866-583-7984
Conference Code: 9894625

Richmond will be next Friday, October 12th. Because this is a tour-based meeting, there is no call-in number.

If you have any questions, just let me know.
Thanks!
Kerri

Good morning,

Quickly touching base on the Shockoe DC2RVA meeting in Richmond. Just a heads up that we will not have a call-in option due to the tour-based nature of the meeting. If you haven't already, shoot me an email if you can attend or if you have questions.

Thanks so much!
Kerri

>
> As an introduction, my name is Kerri Barile and I am the cultural resource lead for the Washington, DC to Richmond, Virginia (DC2RVA) rail project. The Virginia Department of Rail and Public Transportation (DRPT), the Federal Railroad Administration (FRA), and the project consultant team have been working on various studies associated with the rail expansion project since 2014. Cultural resource work has included archaeological and architectural reconnaissance studies and in-depth research to examine all facets of prehistory and history within the project impact area. All studies have been coordinated with the Virginia Department of Historic Resources, the Advisory Council on Historic Preservation, and more than 30 consulting groups and agencies who have a vested interest in this corridor.
>
> As many of you know, studies in Richmond have focused on the potential use of Main Street Station as part of the expanded service. Shockoe Bottom has notable cultural significance for many reasons, including its association with the slave trade and the African-American experience in this area. Although discussions on this area have been ongoing since the project began, we would like to expand the dialogue through an on-site meeting to inform interested parties on current project plans and the status of cultural resource studies to date, and to garner feedback on aspects of this area that are most important to the community.
> Your organization has been identified as a potential participant in this meeting, and we would like to invite you or another representative of your organization to attend. The meeting will be held on Friday, October 12 from 10:00am–12:00pm at Main Street Station (meet in the lobby at 1500 E. Main Street, Richmond). The agenda will include updates from the project team as well as a tour of proposed modifications to the rail system in this area.
>
> Please let me know if you can attend. If you are unable to participate, we also encourage written comments, which can be sent to me via this email address or through standard mail at the address listed below. I am also always free for a call to discuss any ideas and issues you may want to share (540-899-9170). Emily Stock at DRPT (cc'd here) can address general project questions as well.
>
> We hope you are able to join us!

Hello consulting parties,

Thank you again for your continued participation in the cultural resource coordination process for the DC2RVA rail project. Your feedback over the past four years (ack!) has been invaluable. Through our many meetings, calls, letters, and emails, we have continued to refine the cultural resource studies, determination on APE, and resource eligibility, with project effect and MOA mitigation stipulations still ongoing.

Based on feedback received from you all since June and through extensive consultation with the DHR and ACHP, FRA has finalized the list of historic properties in the APE. See attached. The list was augmented to include several resources at your request, including Rippon Lodge, Mason's Hall, Lumpkin's Jail/Devil's Half Acre site, and the Graveyard for Free People of Color and Negros. Take a look and let us know if you have any additional comments.

We are also continuing to work with the DHR and ACHP on project effect, and the results of that dialogue are also included in the attached table. We welcome your comments! In the end, it appears that the project will have an adverse effect on 21 resources, and that the project will have an overall adverse effect on historic properties. I have reached out to all of you to discuss effect and ensuing mitigation for the MOA, and you have provided some incredible ideas. If you have additional thoughts, send them our way! We want to assure that this process is inclusive of all voices and thoughts.

Our next step is to acquire a final effects determination from the DHR and to work on the MOA. Additional details will be disseminated as they are available. In the meantime, please know I am available to chat about any of this! If you have questions on the project in general, I will definitely find the right person to answer any inquiries you have.

Thanks again!
Kerri

List of DC2RVA HPs & Effect_Revised Nov 2018.pdf
1324K

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
1	500-0001	Richmond, Fredericksburg, and Potomac Railroad	Arlington County, City of Alexandria, Fairfax County, Prince William County, Stafford County, City of Fredericksburg, Spotsylvania County, Caroline County, Hanover County, Henrico County, City of Richmond	1836-1943	The RF&P opened in 1836 and eventually spanned from the Potomac River to Richmond. The corridor includes the main rail line, spurs, and associated elements such as station houses, bridges, and other structures.	Eligible under Criterion A	Adverse	
2	029-0218	Mount Vernon Memorial Highway (portion of George Washington Memorial Parkway)	Fairfax County, Arlington County	ca. 1929	The Mount Vernon Memorial Highway is an 8 ½-mile section of the George Washington Memorial Parkway from Fairfax County to the southern boundary of Alexandria. The four-lane wide highway was constructed with concrete slab construction and while much of the concrete remains intact.	Listed under Criteria A and C	No Adverse	
3	000-0045	Washington National Airport (Reagan National Airport)	Arlington County	1941	The primary/historic building is a four-story, multi-bay, airline passenger terminal constructed in the Moderne style. Property also includes six c 1941 airplane hangers and associated runways and other landscape elements.	Listed under Criteria A and C	No Adverse	
4	100-0160	George Washington Junior High School, 1005 Mt. Vernon Avenue	City of Alexandria	1935	The resource is a three-story, multi-bay school building constructed in the Art Deco style originally in a rectangular form. The building is constructed of large, cut, grey sandstone and brick laid in an irregular bond.	Potentially Eligible under C (Assuming eligible for undertaking)	No Effect	
5	100-0133	Parker-Gray Historic District/Uptown	City of Alexandria	ca. 1810	The district covers over 45 blocks in the northwestern quadrant of Old Town Alexandria and abuts the Alexandria Historic District. It consists mainly of small row houses and townhomes built in the mid-to-late nineteenth century.	Listed under Criteria A and C	No Adverse	
6	100-0137	Rosemont Historic District	City of Alexandria	ca. 1900	The district is a planned, residential subdivision that is located northwest of Old Town Alexandria. It consists mainly of small, middle-class houses built between 1908 and 1940.	Listed under Criteria A and C	No Adverse	
7	100-0124	Alexandria Depot, 110 Callahan Drive	City of Alexandria	1905	The train depot known as Alexandria Union Station at 110 Callahan Drive is a one-and-one-half-story, multi-bay, passenger depot constructed in the Colonial Revival style	Listed under Criteria A and C	No Adverse	
8	100-0128	George Washington National Masonic Memorial	City of Alexandria	ca. 1922	The resource at 101 Callahan Drive is a nine-story, multi-bay, memorial and museum sitting on a designed knoll constructed in the Classical Revival style.	Listed under Criterion C and Criteria Consideration F	No Effect	
9	100-0277	Phoenix Mill, 3642 Wheeler Avenue	City of Alexandria	ca. 1776	The building is a two-story, three-bay, industrial building. It is purportedly the “sole remaining example of a mill structure in Alexandria.”	Eligible under Criteria A and C	No Adverse	

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
10	029-0953	Old Colchester Road, Potomac Path, King's Highway	Fairfax County	ca. 1664	This two-lane asphalt road runs northeast from the Occoquan River for approximately 4 miles to the intersection with Route 1 in Lorton. Old Colchester Road played an important role in the county's early transportation history.	Eligible under Criterion A	No Effect	
11	029-0043	Colchester Arms, Fairfax Arms, 10712 Old Colchester Road	Fairfax County	ca. 1756	The building ais a one-and-a-half story, four-bay tavern constructed with an irregular four-room plan. The timber-framed structural system rests on a continuous, raised-basement, stone foundation.	Listed under Criteria A and C	No Adverse	12	500-0001-0022	RF&P Bridge over Occoquon River	Prince William County	1915	The resource is a through-truss, camelback railroad bridge constructed close to the middle of the height of this type of structure, 1870-1930. Although once common, few have survived.	Eligible under Criterion C; Contributing to RF&P HD	Adverse	13	076-0023	Rippon Lodge	Prince William County	1747	One of the oldest houses in Prince William County, the vista from Rippon Lodge looking down Neabsco Creek (and future site of the railroad) was documented by Benjamin Latrobe.	Listed under Criteria A and B	Adverse	14	44ST1223	Civil War Campsite	Stafford County	1862-1863	This site represents a Civil War campsite occupied during the winter of 1862–1863 when the Union Army was ordered into winter quarters.	Potentially Eligible under Criteria A and D (Assuming eligible for undertaking)	Adverse	
15	111-0147	Fredericksburg & Spotsylvania Co. Battlefields National Military Park & Cemetery, Lee Drive	City of Fredericksburg	1862	The resource is a Civil War battlefield park composed of earthworks, cannons, and informational markers in addition to a total of 429 non-archaeological cultural resources, 350 of which are considered contributing to its significance.	Listed under Criteria A and D	No Adverse	
16	111-5295	Battle of Fredericksburg I	City of Fredericksburg	1862	The battlefield is the location of a Civil War battle that occurred between December 11 and December 15, 1862. Union Major General Ambrose Burnside and his troops battled General Robert E. Lee's Confederate men, resulting in a Confederate victory. The battlefield continues to retain a high level of integrity.	Eligible/Potentially Eligible under Criterion A	No Adverse	
17	111-5296	Battle of Fredericksburg II	City of Fredericksburg	1863	The Battlefield is a 12,694.2-acre battlefield associated with a Civil War battle of the same name, which took place on May 3, 1863. Despite expansive residential, commercial, and industrial development around the battlefield and the Fredericksburg, it continues to retain a high level of integrity	Eligible/Potentially Eligible under Criterion A	No Adverse	
18	111-0132-0025	Rappahannock River Railroad Bridge and Associated Structures/Platform	City of Fredericksburg	1927	This multiple-span, open-spandrel, concrete-arch bridge is an excellent and rare surviving example of a reinforced-concrete arch railroad bridge within this region of Virginia. It was erected when the station and tracks were elevated for automobile traffic pass through in downtown Fredericksburg.	Eligible under Criterion C; Contributing to Fredericksburg HD and RF&P HD	Adverse	
N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
19	44SP0187	Bridge/Marye's Mill	City of Fredericksburg	19th century	Terrestrial portion of the site occupies the location of Marye's Mill, depicted in an 1863 photograph taken during the Second Battle of Fredericksburg and mills identified on Gray's (1878) map of late-nineteenth-century Fredericksburg. Includes cut stone piers that are now located under the waters of the Rappahannock River, which may be associated with earlier railroad structures that are no longer extant.	Potentially Eligible under Criteria A and D (Assuming eligible for undertaking)	Adverse	
20	111-0132	Fredericksburg Historic District	City of Fredericksburg	post 1727	The district is a 200-acre area that comprises the city's downtown commercial area, adjacent industrial area, and some of the surrounding residential blocks. This part of Fredericksburg boasts a wide variety of infrastructure that ranges in date from the early eighteenth century throughout the late twentieth century	Listed under Criterion C	Adverse	
21	44SP0688	Block 49/Train Station	City of Fredericksburg	Late Archaic; 19th/20th c	Archaeological remains of several dwellings, outbuildings, and industrial features as identified by UMW in the early 1990s	Potentially Eligible under Criteria A and D (Assuming eligible for undertaking)	Adverse	
22	111-0067/ 111-0132-0505	Dr. Charles Mortimer House, House, 213 Caroline Street	City of Fredericksburg	1764-1801	The home is a two-story, five-bay, Federal-style single-family dwelling built circa 1764 in the Georgian style. Dr. Charles Mortimer was an important figure in Fredericksburg's history. The house is also one of a handful of high-style Georgian buildings in Fredericksburg and it is the only example with its original outbuildings.	Eligible under Criteria B and C; Contributing to Fredericksburg HD	No Effect	23	111-0132-0458	Robert Adams Residence, 528 Caroline Street	City of Fredericksburg	1891	The two story, two-bay resource was built in 1891 as a high-style Italianate dwelling. No other high-style, Italianate dwellings are located within the boundaries of the Fredericksburg Historic District.	Eligible under Criterion C; Contributing to Fredericksburg HD	No Effect	24	111-0132-0147	Shiloh Baptist Church New Site, 521 Princess Anne Street	City of Fredericksburg	1890-1968	This 2-story, multi-bay, Colonial Revival-style church was constructed in 1890 and has been an important part of the ante- and post-bellum, African-American community, playing a role in early African-American education and the Civil Rights Movement in Fredericksburg.	Eligible under Criteria A and C and Criteria Consideration A; Contributing to Fredericksburg HD	No Effect	25	44SP0687	Block 48/Train Station	City of Fredericksburg	Late Archaic; 19th/20th c	Archaeological remains of several dwellings, outbuildings, and industrial features as identified by UMW in the early 1990s	Potentially Eligible under Criteria A and D (Assuming eligible for undertaking)	Adverse	
26	111-0132-0704	Fredericksburg Train Station, 200 Lafayette Boulevard	City of Fredericksburg	1910	The depot is a two-story, five-bay building constructed in the Neoclassical style designed by notable local architect Peck Heflin. The adjacent rail tracks were raised in 1927.	Eligible under Criteria A and C; Contributing to Fredericksburg HD	No Adverse	27	111-0132-0126	The 1770 House, 227 Princess Anne Street	City of Fredericksburg	1770	The home is a one-and-one-half-story dwelling constructed circa 1770 in the Tidewater tradition with some Georgian-style elements. It is a unique example of an eighteenth-century, working-class home in this part of town.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Fredericksburg HD	No Effect	
N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
28	111-0132-0020	Purina Tower	City of Fredericksburg	1916	The resource is a one-and-one-half story commercial building with a tall grain elevator at the northwest corner. The tower has become an important landscape landmark within the community.	Eligible under Criteria A and C; Contributing to Fredericksburg HD	No Adverse	29	111-0132-0522	House, 314–316 Frederick Street	City of Fredericksburg	1851	This is a two-story, four-bay vernacular brick duplex. Oral history states that the building was used as a slave jail in the antebellum period.	Eligible under Criteria A and B; Contributing to Fredericksburg HD	No Adverse	30	111-0009-0795	Pulliam's Service Station, 411 Lafayette Boulevard	City of Fredericksburg	ca. 1937	This resource is a one-story filling station constructed in the Spanish Revival style. It still retains its original materials and configuration.	Eligible under Criteria A and C; Contributing to Fredericksburg HD	No Adverse	31	111-0009	Fredericksburg Historic District Extension	City of Fredericksburg	1794-1967	The district extension is a large area that includes a wide variety of resources immediately surrounding the city's downtown core including residences, commercial buildings, and churches dating to the 19th and 20th c.	Eligible under Criteria A and C	No Adverse	
32	088-5181	Salem Church Battlefield (Banks Ford Battlefield)	Spotsylvania County, City of Fredericksburg	1863	The battlefield includes the land where Hay's and Hoke's brigades attacked the Union Sixth Corps in 1863. It includes Confederate earthworks, Salem Church, and the path of the Plank Road.	Eligible under Criterion A	No Adverse	
33	088-5364	Virginia Central Railway Historic District	City of Fredericksburg, Spotsylvania County, and more	1853	The district is a 38-mile-long railroad corridor that extends west from the CSX railroad (formerly the RF&P) in Fredericksburg to the town of Orange encompassing rail-related structures, sites, and landscape features. The 3.5-mile long eastern section is eligible.	Eligible under Criterion A	No Adverse	
34	111-0145	Fredericksburg Gun Manufactory	City of Fredericksburg	ca. 1775	The Fredericksburg Gun Manufactory is an archaeological site that is at least 75 percent intact. The remains of the manufacturing facility are located beneath a paved asphalt parking lot for a public school.	Listed under Criteria A and D	No Adverse	
35	088-0254	Slaughter Pen Farm, 11232 Tidewater Trail (Wayside Farm or Pierson Farm)	Spotsylvania County	ca. 1861	Slaughter Pen Farm, also known as Wayside Farm or Pierson Farm, is a 19th century farm complex composed of a two-story, three-bay, Italianate-style, single-family dwelling, three agricultural outbuildings, a shed, one kitchen, a slave quarters, and a well.	Eligible under Criterion A	No Adverse	36	44SP0468	Earthwork/ Jackson's Earthwork	Spotsylvania County	1861	This resource includes a set of earthworks within a larger archaeological site. The area is almost totally enclosed by lines of military shelter trenches constructed prior to or following the First Battle of Fredericksburg.	Potentially Eligible under Criteria A, C and D (Assuming eligible for undertaking)	Adverse	

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
37	088-0039	La Vue, 3232 LaVue Lane (Prospect View)	Spotsylvania County	ca. 1848	La Vue, also known as Prospect View, is a two-story, three-bay, single-family dwelling constructed in the Greek Revival style with an L-plan.	Listed under Criterion C	No Adverse	
38	016-0092	Fairfield Plantation Office, Jackson Shrine, 12019 Stonewall Jackson Road	Caroline County	1828	The resource is a one-and-a-half-story frame building; it once served as the office for the 740-acre Fairfield Plantation and is the only surviving building. On May 10, 1863, Confederate General Thomas Jonathan "Stonewall" Jackson died at the site after being wounded at the Battle of Chancellorsville.	Eligible under Criteria A and C	No Adverse	
39	016-0208	House, 12096 Guinea Drive	Caroline County	ca. 1900	The resource is a is a one-and-a-half-story vernacular dwelling with Queen Anne and Craftsman elements. The house was built from a kit purchased from the Sears & Roebuck Company.	Potentially Eligible under Criterion C (Assuming eligible for undertaking)	No Effect	
40	016-5165	Excelsior Industry of Caroline County MPD	Caroline County	ca. 1925-1960	This is a thematic collection of resources that are associated with the manufacture of excelsior, Caroline County's largest industry in the early twentieth century	Eligible under Criteria A and C	No Adverse	41	016-0223	First Woodford Post Office	Caroline County	1874	This small frame office building is located immediately adjacent to the railroad and is associated with the Woodford Excelsior Company, Caroline County's first excelsior manufacturer. It was the focal point of the operation.	Eligible under Criteria A and C	No Adverse	
42	016-0222	Woodford Freight & Passenger Depot, Woodford Road	Caroline County	ca. 1900	The resource is a long, rectangular, one-story, framed building constructed circa 1900. The building served a combined function as both a freight depot and a passenger depot and was one of five original stops along the RF&P in Caroline County.	Eligible under Criteria A and C; Contributing to RF&P HD	No Adverse	
43	016-0220	Carolina Mansion, 11146 Woodford Road	Caroline County	ca. 1900	The ornate, two-and-a-half-story, wood framed dwelling was designed in the Queen Anne style with Classical detailing. The building represents housing constructed in the area in the early-twentieth century, when the RF&P and new manufacturing enterprises brought economic prosperity to the local region.	Potentially Eligible under Criterion C (Assuming eligible for undertaking)	No Effect	
44	016-5136	Milford Historic District	Caroline County	ca. 1880–1960	The district was originally established in the late-eighteenth century as a tobacco trading center. In 1836, the RF&P Railroad was constructed through the area and Milford soon became the largest of the small communities in the county situated along the railroad.	Eligible under Criteria A and C	No Adverse	
45	016-0270	Milford State Bank, 15461 Antioch Road	Caroline County	ca. 1910	The bank is a two-story brick building constructed in the Classical Revival style. The building's façade is divided into five distinct bays via brick pilasters. It is the only Classical Revival building as well as the only bank in the village of Milford.	Potentially Eligible under Criterion C (Assuming eligible for undertaking)	No Adverse	

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
46	016-0286	Coghill-Jeter Store, 22275 Penola Road; Penola, 16095 Polecat Lane	Caroline County	1880	The resource is a two-story, wood-framed commercial building. It is the only surviving commercial building in the largely abandoned village of Penola and is representative of the small country stores once found in crossroads communities and railroad stops throughout the area.	Eligible under Criteria A and C	No Adverse	
47	042-0123	North Anna Battlefield	Hanover County	1864	The North Anna Battlefield was the location of one of the most important Civil War campaigns in the state. It was the culminating point of the 1864 Overland Campaign. The battlefield is composed of defensive earthworks and trenches, as well as other elements predating and contemporaneous with the battle.	Eligible under Criterion A	No Adverse	
48	042-5448	Doswell Historic District	Hanover County	ca. 1880-1940	Doswell Historic District encompasses a rural community that was once a center of major activity along road and rail networks. Nearly a dozen historic properties are located within the district's boundaries.	Eligible under Criteria A and C	Adverse	
49	042-0093	Doswell Depot and Tower, 10577 Doswell Rd	Hanover County	ca. 1928	The current depot is a well-balanced design with classical-styled architectural features. The nearby, contemporaneous "HN tower" housed electrical systems managing an interlocking device permitting safe crossing of trains over both railroads.	Eligible under Criteria A and C; Contributes to RF&P HD and Doswell HD	Adverse	
50	042-5307	Taylorsville Road Historic District	Hanover County	ca. 1900-1935	The community was settled in the early–nineteenth century and has remained active to present day. Most built features are residential and agricultural in nature within the district and reflect architectural styles and construction methods from the late-nineteenth to mid-twentieth century.	Eligible under Criteria A and C	No Adverse	
51	042-0556	Hoopers, 11108 McConnell Lane	Hanover County	1810	Resource was recorded during the LOD survey document but it was not accessible during the study; DHR suggested that it be considered potentially eligible for the project on April 4, 2018	Not evaluated; Not accessible (Assuming eligible for undertaking)	No Effect	
52	166-5073	Berkleytown Historic District	Hanover County	ca. 1900-1965	The district is typical of many small-town, twentieth-century, African-American neighborhoods in that it was relatively isolated from the formal downtown core and is dotted by small vernacular dwellings.	Eligible under Criterion A	Adverse	
53	166-0001	Ashland Historic District	Hanover County	1850-1950	The Ashland Historic District, with its large collection of late-Victorian and Edwardian frame dwellings and its brick commercial core, all set among hundreds of trees, survives as a fine example of a railroad and streetcar suburb preserving much of its turn-of-the-century character.	Listed under Criteria A and C	No Adverse	
54	166-0001-0015	Business Office, Randolph-Macon , 310 N. Center Street	Hanover County	ca. 1895	Historically known as the Blackwell House, it is an elaborate and outstanding example of Queen Anne-styled architecture with Eastlake elements in this historic community.	Potentially Eligible under C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	166-0001-0015

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
55	166-5072	Randolph-Macon College Historic District Expansion	Hanover County	ca. 1900-1960	The Randolph-Macon College Historic District Expansion highlights a significant part of campus that developed between the early-twentieth century up to the mid-1960s when a substantial building boom occurred.	Potentially Eligible under Criteria A and C (Assuming eligible for undertaking)	No Effect	
56	166-0002	Randolph-Macon College Historic District	Hanover County	1872-1950	The district includes the 85-acre college campus and all associated buildings, structures and landscape features. This is the oldest Methodist-related college in the United States still in operation	Listed under Criteria A and C	No Effect	
57	166-0001-0008	Ashland Station Depot, 112 N. Railroad Avenue	Hanover County	1910	The one-story, five-bay, brick depot is said to have been designed by W. P. Lee to replace a previous circa-1890 station that had burned. The building appears little altered and is a good example of a Colonial Revival-styled depot.	Potentially Eligible under A and C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	166-0001-0008
58	166-5041	Priddy House, 107 Stebbins Street	Hanover County	ca. 1926	This one-and-a-half-story, four-bay, single-family dwelling is an outstanding example of Craftsman-styled domestic architecture in this community.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	
59	166-0001-0055	Emily Gray House, 702 S. Center Street	Hanover County	ca. 1850	Historically known as the Emily Gray House, this one-and-a-half-story, three-bay resource is an outstanding example of Second Empire-styled architecture.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	166-0001-0055
60	166-0001-0060	Fleming Fox House, 708 S. Center Street	Hanover County	ca. 1894	Historically known as the Fleming Fox House, this two-and-a-half-story, four-bay dwelling is an outstanding example of a Colonial Revival-styled dwelling with Free Classic elements.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	166-0001-0060
61	166-0036	MacMurdo House, 713 S. Center Street	Hanover County	ca. 1858	This two-story, three-bay, Greek Revival, single-family dwelling is one of the few buildings of its style in Ashland, and it has excellent historic integrity.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	
62	166-0037	Hugo House/Lefebvre House, 904 S. Central Street	Hanover County	ca. 1886	This two-story, three-bay, Queen-Anne, frame dwelling is an elaborate and outstanding example of Queen Anne-styled architecture in the community.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	
63	166-0001-0077	House, 1005 S. Center Street	Hanover County	ca. 1890	This two-and-a-half-story, four-bay, Folk Victorian dwelling possesses characteristics of Queen Anne while its form and orientation suggest an earlier construction date.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	166-0001-0077

73	127-5978	Todd Lofts, 1128 Hermitage Road	City of Richmond	1892	The structure is a five-story, multi-bay commercial building. Originally built as the Richmond Brewery, the E.M. Todd Company bought the building in 1919 and expanded it into a meat production facility. Until 1998 this resource housed the county's oldest meat processor in continuous business.	Listed under Criterion A	No Adverse	
74	127-6145	Southern Stove Works, 1215 Hermitage Road	City of Richmond	1905	This resource is an industrial complex of four brick buildings and a water tower built during the time of rapid industrialization in Richmond. Southern Stove Works was one of the two largest and most important stove making plants in Richmond and the South.	Listed under Criteria A and C	No Adverse	
75	127-0414	Governor's School, 1000 North Lombardy Street	City of Richmond	1938	The building, also known as the Maggie Walker School, is a three-story, multi-bay, school built in the Art Deco style. The school was designed by prominent Richmond architects Carneal, Johnson & Wright as the first vocational high school in Richmond for African-Americans.	Listed under Criteria A and C	No Adverse	
76	127-0354	Virginia Union University Historic District, 1500 North Lombardy Street	City of Richmond	1899	The district consist of 11 acres of the Virginia Union University campus that contain the original collegiate buildings built in a simplified Richardsonian Romanesque style. The university was originally established to educate newly emancipated freedman following the Civil War.	Listed under Criteria A and C	No Effect	
77	127-0822	Carver Residential Historic District	City of Richmond	1845-1920	This 57-acre district comprises primarily late-nineteenth-to-early-twentieth-century residential, commercial, and public buildings. The majority of buildings in the district were constructed during a period of rapid economic growth that took place in Richmond between the 1880s and early 1900s.	Listed under Criteria A and C	No Effect	
78	127-0428	George W. Carver Elementary School, 1110 West Leigh Streets	City of Richmond	1887	The resource is a two-and-a-half-story, five-bay, school built in the Italianate style. The school was purpose-built as a public school for African-American students and saw a notable increase in use in the early-20th century.	Eligible under Criterion C; Contributing to Carver Residential HD	No Effect	
79	127-6171	Richmond and Chesapeake Bay Railway Barn), Richmond-Ashland Railway Company Car Barn	City of Richmond	1907	The resource is a utilitarian industrial building with a T-plan building, structural steel frame, and a Fink Truss roof. It is one of the few surviving buildings associated with the independent electric railway that provided service between the City of Richmond and the Town of Ashland from 1907 to 1938.	Listed under Criteria A and C	No Effect	
80	127-6883	Gilpin Court Apartment Complex, 203 Charity Street West/ 4 E. Hill Street/1403 St. James St./ 1100 N 2nd Street	City of Richmond	1942	The complex consists of 21 buildings, including 18 apartment buildings, a community center, a central heating plant, and a concession building. It was constructed in the early 1940s by the Richmond Redevelopment and Housing Authority and is the first public housing complex constructed in the city.	Eligible under Criteria A and C	No Adverse	
81	127-5679	Barton Heights Cemetery, 1600 Lamb Avenue	City of Richmond	1814	This area is a 12-acre parcel that contains six contiguous, but originally separate, cemeteries laid out in a grid pattern with hundreds of markers of differing materials, sizes, and styles. The cemeteries are significant because they represent early efforts by the African-American population in Richmond to establish their own cemeteries.	Listed under Criteria A and B and Criteria Consideration D	No Adverse	

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
82	127-0353	Richmond Nursing Home, 210 Hospital Street	City of Richmond	1860	This resource is a three-story, multi-bay, institutional building in the Italianate style. It was built by the city of Richmond as an almshouse for the poor and represents the social reform movements that were prevalent throughout Antebellum America	Listed under Criterion C	No Adverse	
83	127-6166	Hebrew Cemetery, 320 Hospital Street	City of Richmond	1816	Previously known as the Hebrew Burying Ground, this resource is a 8.4 acre cemetery with about 2,600 interments that is still in active use today. The Hebrew Cemetery is the oldest active Jewish cemetery in continuous use on the South as well as being the oldest cemetery in continuous use in Richmond.	Listed under Criteria A and C	No Adverse	
84	44HE1203	Grave Yard for Free People of Color and Slaves	City of Richmond	1816	Historic maps from the early-nineteenth century represent this cemetery, used after the closing of the "Burial Ground for Negros" in Shockoe Bottom. The cemetery was in use from 1816 until the mid-nineteenth century. No above-ground evidence of the cemetery exists, and its integrity is unknown.	Potentially Eligible under Criteria A and D (Assuming eligible for undertaking)	No Adverse	
85	127-0344	Shockoe Valley & Tobacco Row Historic District	City of Richmond	post 1737	This district encompasses the area of Richmond's earliest residential, commercial, and manufacturing activity; architectural styles ranging from Federal through twentieth-century industrial vernacular.	Listed under Criteria A and C	Adverse	
86	44HE1098	Main Street Station Parking Lot/Railroad	City of Richmond	19th century	Archaeological site of unknown date. Recorded based on map projections. Potential for intact remains below pavement is high. Railroad elevation structure is located in the parking lot. If the proposed rail is located on the structure, there will be no subsurface disturbances.	Potentially Eligible under Criterion D (Assuming eligible for undertaking)	Adverse	
87	44HE1053	Lumpkins Jail/Devil's Half Acre Site	City of Richmond	1830s-1850s	Site is the former location of a jail for enslaved individuals in operation during the decades before the Civil War. Archaeological excavations completed in 2006 and 2008 revealed features and artifacts under over 10 feet of fill. Site is within the visual APE but will not be physically impacted by the project.	Potentially Eligible under Criteria A and D (Assuming eligible for undertaking)	No Adverse	88	127-6129	Winfree Cottage, East Main Street	City of Richmond	ca. 1866	This dwelling is a one-story cottage constructed in no discernible style. The cottage was constructed for Emily Winfree by her former owner and moved to its current location in 2002.	Eligible under Criterion C and Criteria Consideration B	No Adverse	
89	44HE1097	Railroad, Warehouse	City of Richmond	19th century	Archaeological site of unknown date. Recorded based on map projections. Potential for intact remains below pavement is high. Railroad elevation structure is located in the parking lot. If the proposed rail is located on the structure, there will be no subsurface disturbances.	Potentially Eligible under Criterion D (Assuming eligible for undertaking)	Adverse	
90	127-0172	Main Street Station and Trainshed, New Union Station, Seaboard Airline & Chesapeake & Ohio Railroad Depot	City of Richmond	1901	This multi-story, multi-bay monumental structure symbolizes the importance of the rail terminal as an entrance gateway to Richmond; example of the influence of the French Ecole des Beaux Arts on American building	Determined NHL; Listed under Criteria A and C	Adverse

91	127-6271	Seaboard Air Line Railroad Corridor	City of Richmond	1900	Historic railroad corridor that represents the origins and growth of the railroad industry in the Richmond to Petersburg corridor; reflects the post-Civil War trend of merging smaller operations to provide better service while being more economical.	Eligible under Criterion A	Adverse	
92	127-0019	Masons' Hall, 1805 Franklin Street	City of Richmond	1785	Mason's Hall, a two-story, three-bay frame structure on a brick english basement, is the oldest building in the United States erected for Masonic purposes that has continually been used as a Masonic Hall since its construction.	Listed under Criteria A and C	No Adverse	93	127-0344-0123	Railroad Y.M.C.A., 1552 East Main Street	City of Richmond	1907	The resource is a three-story, three-bay, rectangular, French Renaissance Revival-styled commercial building. It is in good condition and was originally designed by Wilson, Harris and Richards to provide recreational space for railroad workers and their families in the area	Eligible under Criteria A and C; Contributing to Shockoe Valley and Tobacco Row HD	No Adverse	127-0344-0123
94	127-0219	Shockoe Slip Historic District and Expansions	City of Richmond	1780	Circa late-nineteenth and early-twentieth century, erected as wholesale food or tobacco warehouses, with some serving light industry; buildings generally are modified Italianate in style.	Listed under Criteria A and C	No Adverse	
95	44HE1094	Warehouse	City of Richmond	19th century	Archaeological site of unknown date. Recorded based on map projections. Potential for intact remains below pavement is high. Railroad elevation structure is located in the parking lot. If the proposed rail is located on the structure, there will be no subsurface disturbances.	Potentially Eligible under Criterion D (Assuming eligible for undertaking)	Adverse	
96	127-6793	Chesapeake & Ohio (C&O) Railroad Segment	City of Richmond	pre-1851	The C&O Railroad that is primarily made up of two parallel steel tracks that is notable for its role in Richmond's transportation history.	Eligible under Criterion A	No Adverse	
97	127-0171	James River and Kanawha Canal Historic District	City of Richmond	1795	Circa 1785, canal improved navigation on the James River from Richmond to Botetourt County a distance of approximately 200 miles; District comprises of the canal and canal towpath.	Listed under Criteria A and C	No Adverse	
98	127-5809	Bridge #1857, North 14th Street; Mayo Bridge North	City of Richmond	1911	The Mayo Bridge is a closed spandrel reinforced concrete arch bridge. consists of two segments (127-5808, south segment, and 127-5809, north segment) extending between the north and south banks of the James River and separated in the middle by Mayo Island.	Potentially Eligible under Criteria A and C (Assuming eligible for undertaking)	No Adverse	
99	127-6792	Southern Railway	City of Richmond	ca. 1850	A railroad corridor that dates to the mid-nineteenth century and was key in Richmond's development for over a century	Eligible under Criterion A	No Adverse	

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
100	127-0457	Manchester Warehouse Historic District	City of Richmond	1880-1960	The district comprises 42 blocks of industrial development associated with the growth and development of the community of Manchester, an area south of the James River that was once a separate town but later incorporated within the City of Richmond.	Listed under Criteria A and C	No Adverse	
101	127-6193	J.P. Taylor Leaf Tobacco, Southern Stove Works, 516 Dinwiddie Ave	City of Richmond	1920	This resource mirrors other early-20th century factories in the area: all brick construction, with regularly spaced and relatively large windows, and sections of light monitor on the pitched roof apex for allowing natural light for the workers. It was used as a stove factory and then for tobacco processing.	Listed under Criteria A and C	No Adverse	
102	127-6245	Williams Bridge Company, Emergency Fleet Corporation Factory, 700 East 4th Street	City of Richmond	1919	Built in 1919 to assist with World War I war efforts; also used by the US government during World War II; eligible boundary contains main factory and apartment structures used to house workers during both world wars .	Eligible under Criteria A, C, and D	No Adverse	127-6245 WILLIAMS BRIDGE COMPANY
103	127-6248	Pure Oil Company, 1314 Commerce Street, Transmontaigne	City of Richmond	1936	This property has been used to refine, store, ship, and process oil extracts for almost 80 years; founded in 1928 as Gulf Refinery Company; associated with the history of oil production and transport in Richmond	Eligible under Criteria A and C	No Adverse	
104	127-6213	Davee Gardens Historic District	City of Richmond	1947	This district is a planned, symmetrical suburb of Richmond, established in 1947. Homes in the neighborhood retain a high degree of historic integrity, and the street plan is emblematic of post World War II design.	Eligible under Criteria A and C	No Adverse	
105	127-5818	Philip Morris Operations Complex, 3601 Commerce Road	City of Richmond	1959–1974	This is a mid-twentieth-century, light-industrial complex that serves as headquarters for the company's tobacco production. They are unique industrial-related building constructed in the post-modern Neoexpressionist and Brutalist styles.	Eligible under Criteria A and C and Criteria Consideration G	No Adverse	
106	020-5474	DuPont Spruance	Chesterfield County	1929	The first of several buildings on the DuPont Spruance Plant was constructed under the ownership DuPont Rayon Co. This large factory has played a significant role in the development of textiles and plastics in the United States.	Eligible under Criteria A and C	No Effect	
107	043-0307	Battle of Chaffin's Farm (New Market Heights Battlefield), New Market Road	Chesterfield County, Henrico County, City of Richmond	1862	The Battle of New Market Heights is nationally significant because of the all-important role played by Black soldiers in this fight and the recognition of their gallantry by the United States government through the award of 14 Medals of Honor to participants.	Eligible under Criterion A	No Adverse	
108	020-0063	Falling Creek Ironworks Archaeological Site	Chesterfield County	1619	The Falling Creek Ironwork archaeological site was originally recorded as the location of the Virginia Company Ironworks. Subsequent investigation suggests that it could also be Cary's Ironworks, destroyed in 1781 during the American Revolution.	Listed under Criterion D	No Adverse	

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
109	020-5320	Proctor's Creek Battlefield	Chesterfield County, Colonial Heights	1864	Currently the battlefield consists of monuments, interpretive markers (state and freeman markers/park service interpretation at Fort Darling unit/county interpretation at Fort Stephens), a cemetery, historic road beds, period structures (Wooldridge, Willis, Halfway houses), and trenches/field fortifications.	Eligible/Potentially Eligible under Criterion A	No Adverse	020-5320 PROCTOR'S CREEK FIGHT
110	020-0147	Drewry's Bluff Battlefield (Fort Darling, Fort Drewry), Fort Darling Road	Chesterfield County, Henrico County	1862	Drewry's Bluff encompasses 42.4 acres of land. The CCC camp based at Fort Harrison rehabilitated the site in 1935, clearing brush and trees and stabilizing the earthworks.	Eligible under Criterion A	No Adverse	
111	123-5025	Assault on Petersburg (Petersburg Battlefield II), Bermuda Hundred Road (Alt Route 697)	Charles City County, Chesterfield County, City of Colonial Heights, City of Hopewell, City of Petersburg, Prince George County	1865	This resource includes a Civil War battlefield that represents part of the Richmond Petersburg campaign in and around Petersburg. Today, the battlefield consists of earthworks, roadways, and other features as well as interpretive materials.	Eligible under Criterion A	No Adverse	
112	020-5336	The Bellwood-Richmond Quartermaster Depot Historic District, US Department of Defense Supply Center Historic District	Chesterfield County	post-1942	The district is a group of residential, industrial, and military buildings dating from the construction Sheffield/Bellwood Manor (020-0007), circa 1804, to the development of the Korean Conflict era buildings in 1952	Eligible under Criteria A, B, C, D	No Adverse	
113	020-0007	Bellwood, Sheffields, Auburn Chase, Building 42, Defense Supply Center Richmond, 8000 Jefferson Davis Hwy	Chesterfield County	1804	This resource is significant as a representative of an early-nineteenth century antebellum plantation that has evolved into a modern, twentieth-century farm and dairying operation. The main house is an excellent example of vernacular interpretation of the Early Classical Revival style in the piedmont area constructed in an I-form. Numerous archaeological resources are located on the parcel.	Listed under Criteria A, C, and D	No Adverse	
114	44CF0680 / 020-0022	Fort Darling/Battlefield, Earthworks, Fort/ Centralia Earthworks	Chesterfield County	1861-1865	The earthworks were developed by Confederate troops as part of the Outer Line of defenses for Drewry's Bluff. Although some segments of the earthworks has been destroyed, the extant areas remain in excellent condition and the remaining elements of the artillery battery, trenches, and gun emplacements are representative of earthworks developed in this area during the Civil War.	Eligible under Criteria A, C, and D	No Adverse	
115	020-5351	Richmond & Petersburg Electric Railway	Chesterfield County	1902	This resource contains the alignment of the regional trolley system. Creation of this line was the direct impetus for large-scale modifications to settlement patterns in central Virginia.	Eligible under Criterion A	No Adverse	
116	020-0013	House, 3619 Thurston Road	Chesterfield County	1913	This resource is a 1.5-story Colonial Revival dwelling with a gambrel roof and flared eaves. It retains a high degree of architectural integrity.	Eligible under Criterion C	No Effect	
117	127-6251	Atlantic Coast Line Railroad Corridor, Richmond and Petersburg Railroad	City of Richmond, Chesterfield County	post 1833	Historic railroad corridor that represents the origins and growth of the railroad industry in the Richmond to Petersburg corridor; reflects the post-Civil War trend of merging smaller operations to provide better service while being more economical	Eligible under Criterion A	No Adverse

Dr. Kerri Barile
President
Dovetail Cultural Resource Group
300 Central Road, Suite 200
Fredericksburg, VA 22401

Dear Dr. Barile,

This letter serves as Alexandria Archaeology's (Office of Historic Alexandria, City of Alexandria) response to the Cultural Resource Identification-Level Reports Southeast High Speed Rail Tier II Environmental Impact Statement Washington, DC to Richmond Segment. Alexandria Archaeology elected to participate in the Section 106 process as a consulting party.

We concur with the No Effect and No Adverse Effect recommendations for the seven City of Alexandria cultural resources located within the Area of Potential Effect of the DC2RVA project.

Thank you for the opportunity to comment on this project and we will continue to participate as a consulting party.

Sincerely,

Garrett Fesler
Deputy City Archaeologist

Fredericksburg, VA 22408

Dear Dr. Barile:

I am writing on behalf of the American Battlefield Trust ("the Trust"), a nonprofit, nonpartisan organization dedicated to preserving America's hallowed battlegrounds and educating the public about what happened there and why it matters today. To date, the Trust has protected more than 50,000 acres associated with the Revolutionary War, War of 1812 and Civil War in 24 states, including 25,652 acres in the Commonwealth of Virginia.

With this letter, the Trust seeks to follow up on the "Project Update & Effect Discussion with Consulting Parties" hosted by the Washington, D.C., to Richmond Southeast High Speed Rail (DC2RVA) project team in Richmond on June 21, 2018. We appreciate your continued consultation with the Trust and our partners in preservation as the DC2RVA project has advanced; this letter is the third in a series of comments that the Trust has provided since the project's commencement (with previous letters dated June 22, 2015, and November 3, 2017).

The project team's ongoing evaluation of potential impacts to battlefields and related resources — as well as the proactive way in which the team has conducted its outreach to consulting parties and stakeholders — have been welcomed by the Trust. During our most recent meeting with the DC2RVA team in Richmond, the Trust took advantage of the opportunity to ask the team a number of questions, with none more important than our inquiry confirming whether or not the primary, battlefields-centered finding of the project's Tier II Draft Environmental Impact Statement (Draft EIS) continues to hold true.

Pg. 4-155 of the Draft EIS, which was received by the Trust in 2017, asserts the following: "Based on preliminary dialogues with DHR [the Virginia Department of Historic Resources], the Project would have No Adverse Effect on any of the 11 battlefields within the APE [Area of Potential Effects]." We are grateful to the project team for its assurance at this month's gathering that it remains the case that no battlefield in the APE is to be adversely affected, as well as for efforts taken by the project team — and subsequently described to the Trust — to successfully ensure that desired rail improvements in the vicinity of the Trust's Slaughter Pen Farm property in Spotsylvania County will not exceed existing right-of-way onto land previously preserved by the Trust or the National Park Service (NPS).

The Trust was likewise pleased to receive confirmation from the DC2RVA team that it remains in close contact regarding this project with NPS — in particular, with NPS personnel both at the American Battlefield Protection Program as well as at individual parks throughout the project area, such as Fredericksburg and Spotsylvania National Military Park. It is appropriate to reiterate here a request which the Trust has made previously: If the determination that neither the Slaughter Pen Farm nor any of the battlefields within the project's APE will be subject to adverse effect as a result of the project is revised or otherwise revisited at any point, the Trust requests immediate notification of this fact as well as the opportunity to consult with the DC2RVA team at the earliest possible time thereafter.

We appreciate your notification regarding the pair of historic properties connected to the Civil War upon which DHR has determined the DC2RVA project will have an adverse effect: the "Civil War Campsite" in Stafford County (DHR ID 44ST1223) and the "Earthwork" in Spotsylvania County (DHR ID 44SP0468). The Trust encourages the DC2RVA team to collaborate jointly with NPS, DHR, Civil War Trails as well as the Trust's own historians at the appropriate time to determine an ideal approach to interpreting these sites which could serve to mitigate the project's expected impacts. Particularly given the earthwork's location — as well as what the DC2RVA team notes is its "notable connection to military actions during the war" — we believe that both it and the Stafford campsite ("one of many Union army winter encampments in the area … during the winter of 1862-1863") hold important stories that such mitigative interpretation could assist in illuminating for Virginians and Virginia's many visitors alike.

Once again, the Trust looks forward to receiving and reviewing continued project updates from the DC2RVA team in the months ahead. Please do not hesitate to contact us directly with any questions at (202) 367-1861, and thank you for the opportunity to provide these updated comments on DC2RVA's progress to date.

Sincerely,

O. James Lighthizer, President

Dear Kerri,

These comments are being provided jointly by the consulting parties of the Town of Ashland and the Ashland Museum. We appreciate the opportunity to comment on the impacts that the DC2RVA project may have on significant historic resources within and just outside of the Town of Ashland.

At this time, it is the understanding of the Town of Ashland and the Ashland Museum that a third rail will not be built through Ashland's Historic District. While no properties in the historic district are impacted by this option, the properties along Vaughan Road/Archie Cannon Drive and Ashcake Road/S. Center Street where new overpasses are planned must be reviewed. The adverse impact of construction at both the north and the south ends of the Ashland Historic District cannot be overstated.

To the north of the historic district, the home at 804 N. Henry St., located within the proposed Berkleytown Historic District, will be adversely affected by the Vaughan's Crossing overpass. (Report C, Table 4-1, 166-5073.) We agree with your assessment of the importance of Berkleytown, an historic African-American community, and urge the planners to take into consideration both the individual historic properties and the district in general. We believe adjusting the overpass to the north of this area warrants review.

The historic homes at 1014 S. Center St. (DHR 166-0039; 166-0001- 0082) and 1017 S. Center St. (DHR 166-0001-0083) are located close to the proposed Ashcake Road/Center Street road overpass. They are contributing properties of the Ashland Historic District, but DHR has not listed them as *potentially eligible* individually. We disagree and are working with the DHR to change their listing for these homes. Please note that their status may change. We urge the planners to take into consideration these historic structures as they plan the construction of the overpass and the third rail.

In addition, we are concerned about the historic home at 11247 Gwathmey Church Road. It is in neither the Ashland Historic District nor the Town of Ashland, but it is an important historic structure. As your Architectural Report indicates, this house would be impacted if a third rail were to come through this area. We encourage you to start the third rail south of Gwathmey Church Road to avoid adversely impacting this house and also the two homes on S. Center Street.

Finally, we feel compelled to restate our reasons for adamantly objecting to any option that would include a third rail through the Town of Ashland as it relates to the impact on the historic assets in the town.

The NRHP report recommended that the RF&P road bed itself between Richmond and Washington, D.C., (D.C. to Richmond Southeast High Speed Rail 3-166 Architectural Intensive Survey, Report A) should be designated as the RF&P Railroad Historic District for its contribution to the country's transportation history. With that in mind, we point out that one of the few original beds of the 1837 track actually runs through the middle of Ashland. A significant portion of the rest of the original beds along the DC2RVA route have been altered over the years in order to straighten or level out the rails. In many cases, the original residential and business neighborhoods surrounding the tracks have evolved into industrial neighborhoods. Not so in Ashland.

There are potentially three historic districts in Ashland that are in the path of the original third rail option.

The former Ashland Hotel and Mineral Water Company, developed by the RF&P in the 1840s and 1850s, was sold to Randolph-Macon College in 1868. Today the College is still located on that historic property and their three oldest buildings built in the 1870s are a separate historic district unto themselves. Several of the other college buildings built in the late 19th and early 20th century are a part of the larger Ashland National Historic District.

After the Civil War, an important parallel residential and business development occurred just north of Ashland along the tracks. Berkleytown, as it is now known, was a thriving African-American community developed by former slaves and other African Americans of Hanover County. The Town is in the process of creating a historic district around that development. We are researching the homes and businesses in that area, including the former Coleman's Colored Hotel, F.E. Dabney Funeral Home, and John M. Gandy School discussed in the Section 106 Studies.

Unlike other areas along the DC2RVA route, Railroad Avenue/Center Street remains Ashland's premier historic residential and business center as it was in the 19th century. Today that neighborhood encompasses the major portion of the Ashland National Historic District # DHR166-0001. Moreover, DHR has listed several of the homes as potentially eligible for individual listing on the National Register of Historic Places.

We maintain that the railroad bed itself as well as the structures alongside it and the streetscape of lawns and century-old trees are a significant historic part of the history of transportation in the United States, the Commonwealth of Virginia, and of the Town of Ashland. To disturb the layout by enlarging the right-of-way to add a third rail line through town would mean that some of the historic college buildings, the historic station, the old trees along the tracks, and a number of historic homes and businesses would be destroyed or rendered unusable. Without alleyways and with uneven lot sizes along the tracks, there is no way to mitigate the damage a third rail would do to the historic district by physically moving the houses back away from the new rail layout as one might in other areas of the corridor. The district would be irreparably damaged and the heart of historic Ashland would go into steep and immediate economic decline as soon as such a rail plan was announced by the FRA. This decline would not wait the 20 years that it would take the government to accumulate the funds and make the plans for construction. It would be immediate.

Fortunately, the NRHP studies have agreed with the Town's governing body that a third rail will not fit in the Ashland right-of-way. We heartily agree, but we remain concerned nevertheless.

Kerri,

Thanks for the opportunity to comment. We have reviewed the available materials and find the work satisfactory in all respects. We appreciate that the documentation has been exceptionally thorough and that we have had many opportunities to review it and ask questions. We have every confidence that this process will continue to unfold in a manner that is open and transparent. The City has no concerns at this point.

Subject: DC2RVA/Reminder! Consulting Party comments due tomorrow

Hello Consulting Parties!

Just a quick reminder that comments on the five 2018 technical reports, list of historic properties, and project effect are due tomorrow, July 20, 2018, by COB eastern time. I've already received comments from several of you but I know that others are planning on submitting materials. Emailed replies are just fine. Once I receive everyone's feedback, it will be disseminated to the FRA, DRPT, DHR, and project team.

Also, I'll be initiating conversations on mitigation of the 23 resources that have received an adverse effect determination in the next few weeks so there absolutely will be more opportunities to comment!

Thanks so much,

Kerri

Kerri,

I have gotten through all of the documentation for Richmond. My concerns still remain, monitoring the archaeological impact in the Bottom and now that the 1818 cemetery has been identified to avoid that area completely and if there is any peripheral disturbance that it should be monitored. I am not concerned about architectural impacts since for the most part systems are being augmented in Richmond. Do you need a formal letter from me or will this email suffice?

Thanks for all the hard work and excellent documentation.

Kim

Suite 502
Fredericksburg, VA 22408

Dear Dr. Barile:

Thank you for your continued consultation with the Fredericksburg and Spotsylvania National Military Park (FRSP) as the DC2RVA planning progresses. We acknowledge the receipt of the 2018 technical reports, list of historic properties, and the project effect.

We have read through the reports and have a couple comments with regard to the identification and assessment of effects on historic properties, as they relate to FRSP. The park unit known as the Stonewall Jackson Shrine, located in Caroline County, is identified in the Architectural Intensive Survey (Report B). We appreciate that while the survey focused on architecture, it also looked at the larger surrounding property. We feel it is important to note, however, that the NPS owns additional property within the survey area that was not discussed in either the report or its assessment. The NPS owns a tract of 20 acres on the west side of the railroad. This tract is bordered by the railroad to the east, Stonewall Jackson Road (Route 606) to the south, Guinea Station Road (Route 607) to the west, and an unnamed stream to the north. It is our opinion that this additional property should be taken into consideration as part of the larger historic landscape of the Stonewall Jackson Shrine.

While the technical reports address archaeological and architectural resources, some discussion of the larger historic landscapes would be helpful. Our previous comments, included as part of the NPS response dated November 7, 2017, referenced a concern about trains queuing up in the Fredericksburg Battlefield viewshed. While we understand from the meeting we attended on June 26, 2018 that parked trains are not an expected result of the project, the project's potential visual impact on our historic landscapes remains a concern that we feel should be discussed and assessed.

Thank you for consulting with us and for the opportunity to review and comment on the project.

Sincerely,

Eric J. Mink

Re: DC2RVA Project through Hanover County, VA

Dear Dr. Barile:

The Hanover County Historical Commission has reviewed the most recent intensive investigations for the DC to Richmond Southeast High Speed Rail Project, which chart the properties in Hanover County that are adjacent to or through which the rail is proposed. The investigations provided conclude that the Doswell Historic District, VDHR #42-5448, and the Doswell Depot and Tower, 10577 Doswell Road, VDHR #42-0093, will be adversely effected. In addition, these resources are eligible under Criteria A and C for the listing on the National Register of Historic Places. Therefore, the Commission requests the following remediation measures for the adversely effected sites:

1. Because the Doswell Depot and Tower is recommended eligible for listing in the NRHP under Criteria A and C, and considered a contributing element to the Doswell Historic District and the RF&P Railroad Historic District (#500-0001), the Commission requests that the application for listing on the NRHP be completed for both the Doswell Depot and Tower and the Doswell Historic District, and submitted to the National Register of Historic Places for their consideration and possible approval;
2. The Commission agrees with the recommendation that the Depot Tower be located to a point southeast of its current location so that it represents its original location and purpose. Prior to its relocation and in case the structure does not survive the relocation work, document the current location and document the tower structure with measured drawings and photographs. Then provide copies of that work to the Virginia Department of Historic Resources and to Hanover County, VA, for their copies of the local surveillance survey file;

3. If any noise attenuation or vibration reduction measures are possible, those measures should be installed between the proposed third rail and the historic resources; and,
4. Any historic artifacts discovered and collected from the performance of associated historic architectural or archaeological studies in Hanover County or the actual installation of the D.C. to Richmond Southeast High Speed Rail Project through Hanover County should be donated to the Hanover County Historical Society for the future Hanover County museum, which will be located at Hanover Courthouse, Virginia.

If you have any questions, please let me know.

Sincerely,

Claudia Cheely

RE: Washington, D.C. to Richmond Southeast High Speed Rail Project
Comments on Cultural Resource Technical Reports and Project Effects

Dear Ms. Stock,

Historic Richmond is a consulting party for the Washington, DC to Richmond Southeast High Speed Rail (DC2RVA Project). We thank you for providing the five 2018 DC2RVA technical reports, project effect letter and for hosting a consulting party meeting in Richmond on June 21, 2018. We are following up to provide our comments regarding the technical reports and project effects.

Historic Richmond shared concerns and questions regarding several properties within the expanded LOD Expansion Area at the June 21, 2018 consulting parties meeting in Richmond. We appreciate the consideration and further investigation that was given to these properties.

Masons' Hall (DHR ID# 127-0019) located in Shockoe Bottom at 1807 E. Franklin Street is a National Historic Landmark. Built in 1785, it is the oldest building in the country erected for Masonic purposes and continuously used for that purpose. The building was outside the original Area of Potential Effect (APE) and due to a mapping error, inadvertently excluded from the Architectural Reconnaissance Survey of the LOD Expansion Area for the DC2RVA Project in May 2018. We appreciate that the resource has been added to the revised list of historic properties and evaluated for potential effects.

The **Reco Biotechnology** buildings (DHR ID# 127-6658), located at 710 Hospital Street has potentially been in use since the late nineteenth century as part of Richmond Locomotive Works, and at least one of the buildings was constructed in 1908 (much earlier than the 1946 and 1976 dates previously listed in the VCRIS). Historic Richmond requested that additional research was conducted to evaluate eligibility for listing on the National Register before the route is finalized. Dovetail resurveyed and determined that the resource was not eligible, and the recommendation was concurred by DHR. We continue to have questions regarding the potential eligibility of the structures on this site, but we appreciate the subsequent revisions to the route and the resulting removal of the building from the Right-of-Way.

The Graveyard for Free People of Color and Slaves (DHR ID# 44HE1203) is an African American cemetery located at the northeast corner of 5th and Hospital Street. This cemetery has been identified through documentary evidence, not physical evidence. All efforts should be made to avoid disturbing this site. Currently above ground on this site is Talley's Auto Service Center (DHR ID#127-6660), which is not eligible for listing on the National Register. The cemetery is included as a secondary resource but is not evaluated as an archaeological resource under the surveyor's assessment. Consideration should be given to recording this cemetery as a potentially eligible architectural resource under Criterion D and providing interpretive signage. In addition, in the event that any human skeletal remains and associated funerary objects are encountered during the course of the project, such items shall be treated with respect and in accordance with applicable law, and appropriate permits obtained from DHR.

The **Shockoe Valley & Tobacco Row Historic District** (DHR ID# 127-0344) is the oldest historic district in Richmond and contains several buildings (individually eligible and contributing resources) that will be adversely effected by this project. In addition, there are three **archaeological resources in Shockoe Bottom** (DHR ID# 44HE1098, 44HE1097, and 44HE1094) may be adversely effected by subsurface disturbance. In the event that a new structure is built on top of a site that would make data recovery unfeasible, data recovery should be performed prior to construction. While we support bringing full service to Main Street Station, we do have concerns regarding the impact of this project on historic resources.

In particular, we recommend:

i. **Minimize impacts to the existing fabric of nearby historic properties and districts.** This should include minimizing the scale and massing of any proposed structures, material selection for any new structures that reflects the characteristics of the extant structures, and landscaping or vegetative screening of new structural elements, where appropriate.

ii. **Designs for any new structures, including any potential platform extensions and/or parking structures, shall be compatible with the architectural and historic character of nearby historic properties and districts.** Draft design plans for any such new structures shall be submitted at the schematic, 30%, 65%, and 90% stages concurrently to the Federal Railroad Administration, DHR, property owner, and Consulting Parties for review and comment. The design packet shall include a set of plans and elevations for each structure, as well as a schematic showing the proposed design from various perspectives to show proposed visual impacts on historic properties and districts.

In addition, our letter dated November 7, 2017 recommended several suggestions for mitigation, which we reiterate and incorporate below:

1. **Extra care should be taken to preserve historic structures in Shockoe Bottom.** Shockoe Bottom is the oldest historic district in Richmond and we do not support demolishing the Loving's Produce Company building. The Loving's Produce Company, located at the corner of E. Grace and Ambler Streets overlaps with the footprint of the proposed garage. This commercial building was constructed circa 1870, and is a contributing resource to the Shockoe Valley and Tobacco Row Historic District. We

encourage the rehabilitation and reuse of this historic structure in accordance with the Secretary of the Interior's *Standards for Rehabilitation.*

2. **Commission a thorough study of the archaeological, historical, and cultural resources in Shockoe Bottom.** Expand the National Register Nomination to include the history of the slave trade and its role in shaping Richmond's cultural and architectural landscape. *The Cultural Context and Thematic Study for the Proposed Revitalize RVA Project,* prepared by Dutton + Associates in 2013, identified a number of areas with potential for significant archaeological deposits within the APE and should be further explored.
3. **Conduct a comprehensive archaeological survey.** A comprehensive archaeological survey should be completed for all areas with ground disturbance with the expectation that discovered historic resources be preserved and publicly interpreted. Shockoe Bottom contains significant archaeological remains and provides an opportunity to learn from our unexplored history. The African Burial Ground, Devil's Half Acre / Lumpkin's Jail Site, and other buried remains throughout Shockoe Bottom are extraordinarily significant archaeological, historical, and cultural resources because of their association with the nation's enslavement history. Particular care should be taken to protect these sites from harm.
4. **Create a Devil's Half Acre / African Burial Ground / Shockoe Bottom Memorial Park.** Donate funds to design and build an architecturally significant and inspiring heritage site in Shockoe Bottom commemorating the history of the slave trade and the lives, contributions and sacrifices of enslaved persons. Coordinate the donation of City of Richmond-owned property towards a memorial park. Archaeological remains should be commemorated in place.
5. **Encourage the City to adopt a form-based code or design overlay in Shockoe Bottom.** We encourage the adoption of a form-based code or creation of a design overlay district for new development in Shockoe to be based on the district's existing historic architectural character. Any new parking garage or associated resources should reflect and respect the historic character of the Shockoe Valley and Tobacco Row Historic District in location, height, scale, massing and, most importantly, design.
6. **Conduct additional research of Resources 127-6657 and 127-6658 before the route in finalized.** The Reco Biotechnology buildings, located at 710 Hospital Street, are located within the Right-of-Way of the proposed wye track near Hospital Street to turn passenger trains and related Hospital Street improvements. One of the current buildings was constructed in 1908 (much earlier than the 1946 and 1976 dates listed in the V-CRIS files) and our understanding is that the site has been in use since the late nineteenth century as part of Richmond Locomotive Works, later known as the American Locomotive Works. We believe that this building is potentially eligible for listing on the National Register of Historic Places.
7. **Coordinate with other projects.** The Virginia Department of Transportation is working on I95/Broad Street interchange upgrades in the Shockoe Valley. The combined impact on historic resources in Shockoe Bottom of these projects should be evaluated.

We appreciate the opportunity to consult on this project and hope you will take our comments into consideration.

Please do not hesitate to contact us with any questions.

Sincerely,

Cyane Crump

Re: Washington, D.C. to Richmond High Speed Rail Project
Project Effect Recommendation dated June 20, 2018

Dear Ms. Stock and Ms. Barile:

The National Trust for Historic Preservation appreciated the recent opportunity for an in-person consultation meeting with the Federal Railroad Administration (FRA) regarding the Washington, D.C. to Richmond High Speed Rail Project (Project). As we discussed during the meeting, the National Trust appreciates the need for and generally supports the addition of more passenger rail capacity that this Project is intended to provide. As expressed in our comments on the Draft Environmental Impact Statement (DEIS) for the Project, as well as in-person during the recent consultation meeting, the National Trust's goal in participating as a consulting party for this Project is to ensure that adverse effects to the historic and archaeological resources in Richmond's Shockoe Bottom -- including but not limited to Lumpkin's Slave Jail (44HE1053) and the African Burial Ground (44HE1089) -- are taken into account in the Section 106 consultation for this undertaking. In light of this, FRA's continued failure to individually include these two highly significant resources in its evaluation of the Project's effects is troubling.

This letter is a formal objection to the Project Effect Determinations for the Project included in your correspondence dated June 20, 2018 (Effects Determination Letter). This objection to the determinations of adverse effects triggers the regulatory requirement for the FRA to consult further with the National Trust in an effort to reach a resolution. See 36 C.F.R. § 800.5(c)(2)(i). This letter briefly summarizes the National Trust's concerns.

Background

Since 2014, the National Trust has been advocating with our local allies for greater public awareness, commemoration, and protection of the Shockoe Bottom area in Richmond. Shockoe Bottom was the center of Richmond's slave trade and was one of the largest trading hubs for the purchase and sale of enslaved people in the United States. Slave-trade auction houses, offices, slave jails, and residences of the most prominent slave traders were located throughout Shockoe Bottom, which was then a creek valley flowing into the James River.

Following the conclusion of the Civil War, Shockoe Bottom was systematically razed, filled and ultimately paved over. Decades of re-development and highway construction have obscured above-ground visual evidence of the history that occurred at Shockoe Bottom. Nevertheless, archaeological resources survive and the area draws visitors to commemorate Shockoe's history of oppression, cruelty, endurance, and courage.

In recent years, members of Richmond's African American community have developed a proposal to commemorate Shockoe Bottom as sacred ground associated with the suffering, injustice, and resistance to slavery. The community-generated proposal would construct a Memorial Park on nine acres of land in Shockoe Bottom. The Memorial Park would serve as a Site of Conscience, where the public can remember and learn about past struggles for freedom, and be inspired to work to address the continuing legacies of slavery. The Memorial Park would include public interpretation of Lumpkin's Slave Jail (also known as the Devil's Half-Acre), the African Burial Ground, and other historic resources; plans for interpreting these resources would be impacted by this Project.

The APE is Inconsistent with Section 106 Regulations

The consulting parties were not consulted regarding the determination of the Area of Potential Effects (APE) for the Project. We understand from the Effects Determination Letter that staff from the Virginia Department of Historic Resources generally concurred with the APE via correspondence dated February 2, 2015. However, there was no effort to involve consulting parties in that decision. While the National Trust has not received a copy of that 2015 letter, we assume that it conforms with the APE as described in the DEIS for this Project.

The DEIS considered an APE for archaeological resources that extends from 50-100 feet on either side of the proposed rail alignment, and 50 feet beyond the limits of disturbance for new overpasses or where there will be construction and/or earthwork. DEIS at 3-120. For aboveground resources, the APE extends 500 feet on either side of the center line of the Project's corridor along most of the route, but the APE is limited to a single city block in denser urban settings. The APE was also expanded in some areas "to capture viewshed and any potential visual impacts (areas where alterations to a resource's setting and feeling could occur)." DEIS at 3-131. For the vast majority of the Project route, the National Trust has no concerns with the approach to identifying the APE outlined in the DEIS. However, this approach is overly narrow when considering impacts to historic resources in Shockoe Bottom.

The APE should be expanded to include Lumpkin's Slave Jail and the African Burial Ground. While these are archaeological sites, they are also cultural sites that are interpreted and regularly visited by the public. These resources are likely eligible for inclusion in the National Register as part of a Traditional Cultural Property, as part of a larger archaeological district that includes much of Shockoe Bottom, and/or as a historic site eligible under Criterion A where setting and feeling is important to the resource's integrity. The proposed adverse effect determinations for the Project are incomplete and inaccurate unless they include a detailed evaluation of these resources.

The National Trust welcomes the opportunity to further discuss our concerns about how the APE should be applied to Shockoe Bottom and to better understand the analytical process used by the FRA to make the determination to exclude these resources. We also respectfully request a copy of the February 2, 2015 correspondence regarding this issue.

The Adverse Effect Determinations are Inaccurate and Inadequate

In reaching determinations of effect, the FRA must consider the direct, indirect and cumulative adverse effects that the Project will have on historic resources. FRA's current adverse effect determinations are premature, based on insufficient information about the types of resources impacted, and are not adequately informed by the involvement of consulting parties and the public.

- **The Currently Identified Historic Sites in Shockoe Bottom are Not Solely Limited to Significance as Archaeological Sites under National Register Criterion D for Data Recovery.**

Lumpkin's Slave Jail and the African Burial Ground are not National Register-eligible solely as archaeological sites. These resources also are potentially eligible for listing as above-ground historic sites under National Register Criterion A, for their association with historical events. These two known sites have *in-place* significance that make their setting, feeling and association important aspects to maintaining their integrity. Lumpkin's Slave Jail and the African Burial Ground are marked and include interpretative signage for the public. They are included as stops along Richmond's Slave Trail and they are regularly visited by the public and descendant community. The Project has the potential to adversely affect the setting and feeling of these sites, and those potential effects have, to date, been unevaluated. Lumpkin's Slave Jail and the African Burial Ground should be fully evaluated for their National Register eligibility for listing individually under Criterion A.[1]

Additional archaeological research must be conducted, which should evaluate whether these resources are part of a potential archaeological district that would include much of the area of Shockoe Bottom. A full archaeological survey in Shockoe Bottom should be conducted to supplement existing, incomplete archaeological research. There is a very high potential for discovery of additional nationally significant historic resources associated with Shockoe Bottom's difficult history. The boundaries of an archaeological district could very likely fall within the APE boundaries for this Project. This would require consideration of potential adverse effects to the district.

Shockoe Bottom should also be evaluated for National Register eligibility as a Traditional Cultural Property (TCP). The Lumpkin's Slave Jail and African Burial Ground sites hold particular cultural importance for the African American community and for descendants of enslaved people who were imprisoned, sold, and buried in Shockoe Bottom. A TCP is a site associated "with cultural practices or beliefs of a living community that (a) are rooted in that community's history, and (b) are important in maintaining the continuing cultural identity of the community." *National Register Bulletin* 38.[2] To the descendant community, especially, Shockoe Bottom is hallowed ground and a sacred place, despite its current blighted condition. This is a spiritual place where members of the descendant community visit to honor their ancestors, and for other people the area is a site of contemplation and reconciliation. The preservation and interpretation of Shockoe Bottom is important in maintaining the cultural identity of a community whose history has been systematically erased and literally buried.

---

[1] The National Trust acknowledges that recent email correspondence on July 9, 2018 related to the Project stated that the Lumpkin's Slave Jail and the African Burial Ground sites will not be included in the APE as individual resources, because "they fall outside of the limits of disturbance and this is how the archaeological APE has been applied throughout the corridor." The email went on to note that "the two sites are in the APE and will be mitigated as contributing elements to the Shockoe Valley and Tobacco Row Historic District (the project will have an adverse effect on the district)." While we appreciate that this is an incremental step towards acknowledging and assessing adverse effects to these resources, the National Trust continues to believe that the APE should be expanded to include these resources as individual resources that will suffer an adverse effect.

Because the significance of the Lumpkin's Slave Jail and African Burial Ground sites have been viewed solely through the lens of Criterion D, the sites have been omitted from the APE, and no effort has been made to consider their significance under Criterion A, identify a larger archaeological district, or evaluate the area as a TCP. This renders the adverse effect determinations for the Project incomplete, because the Project's effects on these resources, including effects to the associated cultural values and practices, have not been considered.

Moving forward, the two existing known sites of Lumpkin's Slave Jail and the African Burial Ground should be evaluated for eligibility under Criterion A, the area should be evaluated for TCP-eligibility, and the concept of an archaeological district should be further explored. Consideration of the Project's adverse effect should take into account the full nature and significance of Shockoe Bottom. This will require additional consultation with the descendant community that ascribes profound spiritual and cultural significance to the area.

- **The Project's Effects Determinations Fail to Adequately Consider Indirect and Cumulative Effects.**

The African Burial Ground already serves as an informal memorial for local descendant communities and attracts visitors as a place of prayerful reflection. The fact that no ground disturbance will occur within the boundaries of Lumpkin's Slave Jail and the African Burial Ground, or that the area also suffers from some noise pollution, does not mean that they will not be negatively impacted by the Project. On the contrary, impacts to the site, including noise, vibration, visual impacts, and the cumulative impacts of reasonably foreseeable induced development, are likely to be significant and must be fully considered as part of the Section 106 consultation process. Following the recent in-person consultation meeting and a review of the Effects Determination Letter (where there is no discussion of cumulative adverse effects), the National Trust is seriously concerned that the FRA is not adequately considering the Project's indirect and cumulative effects.

Section 106 of the NHPA requires agencies to consider the range of effects that a federal undertaking may have on historic resources. Agencies must consider indirect effects including the "visual, atmospheric or audible elements that diminish the integrity of the property's significant historic features." 36 C.F.R. § 800.5(a)(2)(v). Agencies must also consider “reasonably foreseeable effects caused by the undertaking that may occur later in time, be farther removed in distance or be cumulative.” *Id.* § 800.5(a)(1).

---

[2] While Traditional Cultural Property designation has been commonly used for Native American cultural sites, *National Register Bulletin* 38 is clear that its applicability is much broader. *National Register Bulletin* 38 recognizes the First African Baptist Church Cemetery in Philadelphia as an example of a TCP for its cultural significance for the congregation that traces descent from those interred in the Cemetery, as well as "Philadelphia's African American community in general," and *Bulletin* coauthor Thomas King has used the African Burial Ground in New York City as a paradigmatic example of a TCP.

The National Environmental Policy Act (NEPA) contains similar guidance and direction to agencies regarding consideration of indirect and cumulative effects. NEPA regulations direct federal agencies to consider indirect effects that “are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable. Indirect effects may include growth inducing effects and other effects related to induced changes in the pattern of land use, population density or growth rate . . . .” 40 C.F.R. § 1508.8(b). Cumulative effects include those that result “from the incremental impact of the action when added to other past, present, and *reasonably foreseeable* future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time.” *Id.* § 1508.7 (emphasis added).[3]

FRA’s current review of indirect and cumulative effects for the Project is overly narrow. The DEIS considers only effects to resources located within the narrow limits of the archaeological and aboveground APE. This narrow review within an overly circumscribed geographic area is not supported by CEQ guidance, which provides that:

> When analyzing the contribution of this proposed action to cumulative effects, . . . the geographic boundaries of the analysis almost always should be expanded. These expanded boundaries can be thought of as differences in hierarchy or scale. Project-specific analyses are usually conducted on the scale of counties, forest management units, or installation boundaries, whereas cumulative effects analysis should be conducted on the scale of human communities, landscapes, watersheds or airsheds.[4]

This guidance makes it clear that cumulative effects review should not be limited to an APE established to consider direct effects. A more appropriate scale of review for indirect and cumulative effects of this project would include the entire Shockoe Bottom area, including several city blocks where development is likely to be induced as a result of the expanded access to passenger rail created by the Project.

At the recent consultation meeting, the FRA explained that the agency usually considers only development projects that are “planned and funded” when reviewing cumulative effects. This “planned-and-funded” approach is not supported by NEPA regulations or guidance documents. In fact, CEQ guidance explicitly warns agencies against this approach and states:

> Commonly, analysts [evaluating reasonably foreseeable future actions] only include those plans for actions which are funded or for which other NEPA analysis is being prepared. This approach *does not meet the letter or*

---

[3] The Council on Environmental Equality (CEQ) has also developed useful guidance for agencies in better understanding NEPA’s requirement to consider cumulative effects. See generally, CEQ, “Considering Cumulative Effects Under the Environmental Policy Act” (January 1997), available at http://energy.gov/sites/prod/files/nepapub/nepa_documents/RedDont/G-CEQ-ConsidCumulEffects.pdf.

[4] Id. at 12.

> ***intent of CEQ's regulations***. It underestimates the number of future projects, because many viable actions may be in the early planning stage.[5]

Court decisions addressing this issue have also generally concluded that reasonably foreseeable future actions need to be considered, even if they are not specific proposals. *See, e.g.*, *Scientists' Inst. for Public Information, Inc. v. Atomic Energy Comm'n*, 481 F.2d 79, 1079 (D.C. Cir. 1973) (finding that "reasonable forecasting" is implicit in NEPA, and it is the responsibility of federal agencies to predict the environmental effects of proposed actions before they are fully known). A cumulative effects analysis should incorporate information from planning documents prepared by other federal agencies, state and local governments, private development proposals, and projected development trends in the appropriate geographic area. Guidance on transit-oriented development about what types and scale of development is induced around transit upgrades is widely available and should be consulted.[6]

For this Project, where the community-generated proposal for a Memorial Park is well known to the reviewing agency, the cumulative effects review should consider how the Project may impact these plans. Increasing the availability of passenger rail will draw increasing numbers of people to Main Street Station and Shockoe Bottom. That will tend to spur additional commercial development in or around Shockoe Bottom. This development has a high likelihood of causing cumulative adverse effects to the historic resources in Shockoe Bottom unless it is carefully considered and managed. A full consideration of indirect and cumulative effects for the Project is essential to ensure that efforts to avoid, minimize or mitigate harms are effective in protecting resources like Lumpkin's Slave Jail and the African Burial Ground in Shockoe Bottom.

Additional Consultation is Required

The National Trust is seriously concerned about the potential direct, indirect and cumulative adverse effects of the Project on the historic resources in Shockoe Bottom. As a result, the National Trust strongly disagrees with the absence of any effect determinations at all for Lumpkin's Slave Jail and the African Burial Ground. The National Trust also believes that the cumulative adverse effects on historic resources in Shockoe Bottom must be considered. Because of the deficiencies in the materials addressing adverse effects provided to date, the National Trust strenuously objects to each and every recommended determination of no adverse effect made by the FRA.

The National Trust respectfully requests that the FRA address in writing the concerns raised in this letter. We further request an opportunity to meet in person at Shockoe Bottom for a consulting party meeting that includes representatives from the City of Richmond, Virginia Department of Historic Resources, and, especially, from Richmond's African American and descendant community. We would be pleased to help make introductions to facilitate such a meeting.

Kerri,
Below are NPS comments on the technical reports. If you have any questions, please let me know.

Thank you,
Laurel

Phase IB Archeology Survey

- While Area 1 is highly developed, that does not eliminate the potential for archeological resources to exist. In fact, intact archeological resources have been discovered in the vicinity of Long Bridge on NPS land. For this reason, it would be helpful to confirm if the project corridor/APE is aligned with the existing right-of-way and determine if the limits of disturbance for the Preferred Alternative will stay within previously disturbed soils.
- No archeological testing occurred in Areas 1 and 2a, which are located adjacent to GWMP lands. The report states these locations have been previously disturbed and did not warrant testing. These conclusions for archeological potential were partly based off of 2015 Phase IA and 2016 Phase IB surveys, as well as a predictive model. I do not recall these materials being previously provided to the park. Would it be possible to request copies? It would be helpful to see what additional research and analysis was conducted that led the project team to these conclusions.

Architecture Addendum

- Tables 3-2 and 4-1: 'Mt. Vernon Parkway' should be changed to 'Mount Vernon Memorial Highway,' which is part of the George Washington Memorial Parkway.

Intensive Architecture Reports

Kerri-
Below are comments from NPS staff (GWMP, NCR, and the American Battlefield Protection Program). The contact at ABPP is Emily Kambic, archeologist,

202-354-2035, emily_kambic@nps.gov. If you have any questions, please let me know.

Thank you,
Laurel

-For the portion of the project area adjacent to GWMP lands, the DEIS states work will be confined to the existing right of way and include the addition of two new tracks (to match the Long Bridge project alignment), installation of new culverts under the rail alignments, new stormwater management facilities, and the installation of additional signal and communication facilities.
Regarding the last portion, we are curious to know if any of the new signal or communication facilities will be visible from NPS lands, as well as if any vegetation clearing is required for their installation. Additionally, any potential vegetation clearing has the potential to increase the visibility of railway related infrastructure. In order to maintain the character and feeling of the scenic parkway, we work closely with our neighbors to avoid and minimize any visual impacts to the greatest extent possible. While GWMP Resource Management staff is generally in agreement regarding the project's No Adverse Effect determination for the GWMP/MVMH, we also want to make sure any potential visual impacts are also identified and included in this assessment.

-The American Battlefield Protection Program (ABPP) notes that Dovetail's 2018 technical reports and list of historic properties incorporated all of the battlefields intersecting the APE that ABPP noted in November 2017, apart from ones outside of the limits of disturbance (LOD) for the preferred alternative. ABPP appreciates the consideration of all nine relevant battlefields.

-ABPP is concerned that none of the technical reports discuss individual battlefields as cultural resources holistically from a cultural landscape perspective, as recommended in *National Register Bulletin 40: Guidelines for Identifying, Evaluating, and Registering America's Historic Battlefields*. Specifically, there is no discussion of methodology for assessing indirect effects on battlefields (e.g. visual and auditory) or evaluation of the current integrity of setting and feeling of individual battlefields. Additionally, adverse effects to archeological resources within battlefield boundaries (such as Jackson's Earthwork [44SP0468]) should be considered in the overall determination of effect on the battlefields. ABPP feels that there is insufficient documentation supporting the proposed determination of no adverse effect on the nine battlefields within the LOD.

- In previous comments, ABPP has recommended that this documentation should consist of KOCOA military terrain analysis and/or a cultural landscape report on the relationship between the historic railways of the Civil War and the battlefields in order to determine extant defining features. Documenting both historical and current conditions is necessary to determine whether the addition of a third track and increased rail service could substantially change the historic setting or eligibility of these battlefields under Criterion A. If already considered in discussions with VDHR, ABPP requests more information about how these questions were addressed in the determinations of effect.

-ABPP appreciates that metal detection was conducted as part of archeological survey in all parts of the APE for direct effects that intersected with battlefield Potential National Register (PotNR) boundaries, and considers this approach sufficient at this stage of the project. ABPP recommends that in future studies, the larger Battlefield Boundary (also available from VCRIS) be used instead of the PotNR. When using the PotNR for Section 106 compliance projects, "the PotNR cannot be assumed to be the equivalent to an area that has had adequate National Historic Preservation Act, Section 110 or Section 106 identification, assessment and evaluation… Appropriate use of the ABPP mapping resources should be limited to informing the research design and not limiting the boundaries to the narrows of what is seen by visual evaluation" (ABPP 2016 Battlefield Survey Manual, p. 33).

RE: Southeast High Speed Rail Project, Washington D.C. to Richmond Segment
Section 106 Comments on Cultural Resource Technical Reports
DHR #2014-0666

Dear Ms. Barile:

We completed review of the architectural and archaeological reports focusing on project segments that affect Prince William County and we offer the following comments.

Report Title and Cultural Resource	Project Comment	PWC Comment
Phase IB Archaeological Survey for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project: Preferred Alternative Limits of Disturbance		
44PW1008	The portion of site in APE is not eligible.	Concur
Addendum: Architectural Reconnaissance Survey of the LOD Expansion Area for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project: Arlington, Caroline, Chesterfield, Hanover, Henrico, Fairfax, Prince William, Stafford and Spotsylvania Counties and the Cities of Alexandria, Fredericksburg, and Richmond, Virginia		
076-0023, Rippon Lodge/Blackburn House – Listed on NRHP/VLR	Remain Listed	Concur
Architectural Intensive Investigations for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project: Report A		
500-0001 Richmond, Fredericksburg and Potomac Railroad Historic District	Eligible Under Criterion A	Concur

Report Title and Cultural Resource	**Project Comment**	**PWC Comment**
500-001-0022 RF&P Bridge Over Occoquan River	Eligible Under Criterion C; Contributing to the RF&P	Concur
Architectural Intensive Investigations for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project: Report B	No Resources in PWC	No Comment
Architectural Intensive Investigations for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project: Report C	No Resources in PWC	No Comment

If you have any questions regarding this review, please call Justin Patton, County Archaeologist at 703-792-5729 or email him at jspatton@pwcgov.org.

Re: Washington, D.C. to Richmond High Speed Rail Project
Project Effect Recommendation dated June 20, 2018

Dear Ms. Stock and Ms. Barile:

Thank you for the opportunity to offer our comments regarding the Project Effects Determinations for the Washington, D.C. to Richmond High Speed Rail Project (Project) included in your correspondence dated June 20, 2018 (Effects Determination Letter). We and other community partners have been involved with the greater Shockoe Bottom discussion since the area that was the center of the slave trade was threatened with erasure by new development. Since then, we have helped convene myriad public meetings and design charrettes to ascertain the wishes of the community for this area, the result of which is a proposed 9-acre Plan for a Memorial Park.

As our partner in this work and as sponsor of further study of the Shockoe Bottom area planned as part of a recently-announced $75,000 grant, we share the concerns enumerated by the National Trust for Historic Preservation in their letter submitted July 20, 2018. While we are certainly supportive of expanded rail service for the City of Richmond and improvements to the DC2RVA corridor, we are also concerned about the narrow scope of the APE for this project. The Lumpkin's Jail and Burial Ground sites should be included in the APE for the project since they would suffer an adverse effect caused by development induced by the rail expansion. This development also could interrupt plans for the memorial park and incentivize inappropriate development unless careful economic planning is put into place.

The historic significance of all of Shockoe Bottom needs to be better understood. To that end, we also support the inclusion of Mason Hall (one of our 2017 Virginia's Most Endangered Historic Places listings) as a potentially-affected historic property in the APE. Evaluation of the area's National Register eligibility as a Traditional Cultural Property (TCP) and surveying the area completely to identify the boundaries of what should be a larger archaeological district would be appropriate next steps. There is much to be learned about Richmond's role in the slave trade; as such, the area potentially affected by the Project extends well beyond the currently-defined limits.

Preservation Virginia would like to see additional consultation opportunities as well, including a meeting on site and greater involvement of the descendant community. These actions will help ensure that the resources of Shockoe Bottom are adequately taken into account as the Section 106 conversations move into discussions about how to minimize and mitigate the Project's adverse effects.

Sincerely,

Justin A. Sarafin
Director of Preservation Initiatives & Engagement
Preservation Virginia

Hi Kerri,

Thank you for reaching out, and hosting the update calls. ABPP also defers to park representatives here, as they have the best connection to the communities and potential audiences for these efforts.

Best,
Emily

Good morning!

Thank you all for participating in phone calls and our meeting the other week. I wanted to check back in to make sure you got the data that you needed from the call/meetings and see if I can answer any additional questions and/or chat about any feedback regarding cultural resources? Please feel free to email or I can give you a call whenever is convenient.

Thanks!

Kerri

Thanks! I'm going to put that in as mitigation for the RF&P RR so in this case, it's not "either/or" for Fredericksburg but "and" as you will have info in the story map as well as the other mitigation items if that works? That seems to make the most sense to me as the story map will be corridor wide, and the RF&P covers about 90% of the corridor.

ksb

I'm tempted by the opportunity to include the nomination for the HD expansion, because I know that will likely not happen anytime soon otherwise. However, I think the context on the evolution of the railway system is very valuable and would give us some good opportunities for interpretation, so I'd rather keep that in.
>
> Where will the great idea about creating a story map go in all this? Rather than including the creation of a narrative for use in developing a webpage, we might refer to inclusion in a story map here and the allowance that any materials created for Fredericksburg in a story map could be used by us separately as well (i.e. if we wanted to create our own story map or webpage).

RE: DC2RVA/Mitigation for War-Related Resources

1 message

Mark Coombs <mcoombs@battlefields.org> Wed, Oct 17, 2018 at 10:14 AM
To: Kerri Barile <kbarile@dovetailcrg.com>, Adam Gillenwater <agillenwater@battlefields.org>, "Kambic, Emily" <emily_kambic@nps.gov>
Cc: DC2RVAdocumentcontrol <DC2RVAdocumentcontrol@hdrinc.com>

Thanks, Kerri.

As we commented in June and sought to underscore at the meeting earlier this month, those of us at the Trust believe that the "historic properties connected to the Civil War upon which DHR has determined the DC2RVA project will have an adverse effect … hold important stories that … mitigative interpretation could assist in illuminating for Virginians and Virginia's many visitors alike."

Interpretive signage is certainly one option — but we encourage the DC2RVA team to consult directly with the officials at Fredericksburg and Spotsylvania National Military Park on whether this is indeed the best option, particularly at site 44SP0468. John Hennessy, Eric Mink and team will likely have a good sense of what would be ideal and may be able to suggest a path forward wherein the new interpretation could be seamlessly woven into the park's existing interpretative offerings.

The Trust's primary interest is in ensuring that the form of interpretation pursued is one that the public will be able to readily access and appreciate.

Thanks again for your ongoing outreach and associated efforts on this front.

Yours,

Mark

Subject: Re: DC2RVA/Upcoming consulting party meetings on project effect and mitigation

Good morning everyone,

A reminder to RSVP if you can attend one of the upcoming consulting party meetings in person or via telephone. See email below for more info. Fredericksburg is this Thursday, October 4th, and DC is this Friday, October 5th. Both of these will have both in-person and call-in options.

Call In: 866-583-7984

Conference Code: 9894625

Richmond will be next Friday, October 12th. Because this is a tour-based meeting, there is no call-in number.

If you have any questions, just let me know.

Thanks!

Kerri

National Trust *for* Historic Preservation
Save the past. Enrich the future.

Memo

DATE: OCTOBER 6, 2018

TO: CONSULTING PARTIES AND INTERESTED PUBLIC

FROM: NATIONAL TRUST FOR HISTORIC PRESERVATION

RE: DC2RVA RAIL EXPANSION PROJECT / SHOCKOE BOTTOM MEMORIAL PARK

The National Trust for Historic Preservation, a private non-profit organization, offers the following information in advance of the October 12, 2018 on-site consulting parties meeting about the federal DC2RVA rail expansion project in historic Shockoe Bottom. The National Trust does not oppose the DC2RVA rail expansion project. However, we recognize that expansion of the Main Street Station for the DC2RVA project has the potential to lead to intensive new transit-oriented development. These changes are reasonably foreseeable and must be managed in thoughtful ways that protect the cultural, historic, and archaeological values of Shockoe Bottom.

Federal Agency Consultation to Avoid Harm to Historic Resources in Shockoe Bottom

The federal National Historic Preservation Act requires federal agencies to consider the impacts that the agencies' undertakings will have on historic resources. The Act created a procedure (called Section 106 consultation) for agencies to follow that requires the agencies to consult to "avoid, minimize or mitigate" harms to historic resources. This obligation only applies to historic resources that are listed on or eligible for listing on the National Register of Historic Places, the nation's official list of historic resources worthy of preservation.

The Federal Railroad Administration (F.R.A.) – with the Virginia Dept. of Rail and Public Transportation – is currently conducting Section 106 consultation for the DC2RVA rail expansion project. One important aspect of Section 106 is the requirement that federal agencies consult with the public and interested parties (called "consulting parties"). The F.R.A. is convening an on-site consultation meeting in Shockoe Bottom on October 12 to satisfy this obligation. Section 106 requires the federal agency to complete a set of sequential steps:

1. Identify any consulting parties and the interested public;
2. Gather information to identify potentially affected historic properties, and identify an Area of Potential Effects (the "A.P.E.") for the undertaking;
3. Determine whether the agency's undertaking would have adverse effects on these historic properties; and,

4. Explore ways for the agency to avoid, minimize or mitigate such adverse effects.

DC2RVA Rail Expansion Project at Main Street Station in Shockoe Bottom

For the DC2RVA rail project, the F.R.A. has identified historic resources along the entire railroad corridor from DC to Richmond – and in Richmond's historic Shockoe Bottom. To guide the agency's identification process, the F.R.A. established an Area of Potential Effects of 500 feet from the center line of the rail for above-ground historic resources and an A.P.E. of 50 to 100 feet from the center of the rail corridor for archaeological resources. This means that the F.R.A. is only considering impacts to historic sites that fall within these defined A.P.E. boundaries.

Importantly, the F.R.A. also has determined to treat the African Burial Ground and the Lumpkin's Slave Jail Site solely as archaeological resources. The F.R.A.'s approach to the African Burial Ground and the Lumpkin's Slave Jail Site puts these two sites outside of the Area of Potential Effects for the DC2RVA project, which means that the F.R.A. has determined that it is not necessary for the F.R.A. to consider ways to "avoid, minimize or mitigate" any adverse effects to the African Burial Ground and the Lumpkin's Slave Jail Site that may be caused, for example, by intensive transit-oriented development in Shockoe Bottom.

To persuade the Federal Rail Administration – and the Virginia Dept. of Rail and Public Transportation – to fully consider the broader context and significance of Shockoe Bottom and to fully consider the impacts that increased transit-oriented development are likely to have on the historic and cultural values of Shockoe Bottom, it is necessary to convince the F.R.A. that the African Burial Ground and the Lumpkin's Slave Jail Site are not just historically significant as archaeological sites, but that Shockoe Bottom also is eligible for the National Register of Historic Places as an above-ground type of historic resource. The concept that the National Trust believes best accomplishes this goal is called a Traditional Cultural Property (or "T.C.P.").

Shockoe Bottom as a Traditional Cultural Property

A Traditional Cultural Property is a type of historic resource that can be determined eligible for listing on the National Register of Historic Places when it is associated "with cultural practices or beliefs of a living community that (a) are rooted in that community's history, and (b) are important in maintaining the continuing cultural identity of the community."

From everything we have learned from our allies in the community, the National Trust believes that Shockoe Bottom is rooted in Richmond's history and is important today to maintaining the continuing cultural identity of Richmond's African American and descendant community. Examples of other historic places that have been officially determined to be Traditional Cultural Properties include: many Native American sacred sites around the nation; historic places that are connected with immigrant populations, such as a riverfront in Florida that is part of a Greek community focused on sponge diving; and, a church in Louisiana associated with the Cane River Creoles of Color community.

The National Trust believes that Shockoe Bottom fits comfortably within this category of historic resource as a Traditional Cultural Property because of the value placed by the community and because of the continued relevance of Shockoe Bottom to the descendant community -- as well as Shockoe Bottom's remarkable connections to the esteemed Virginia Union University.

Conclusion: Advocacy for Shockoe Bottom

First, the National Trust hopes the Federal Railroad Administration and the Virginia Dept. of Rail and Public Transportation will hear from consulting parties and the interested public that:

- Shockoe Bottom needs additional archaeological study, but the place is significant for more than what can be learned from archaeological exploration alone.
- Shockoe Bottom is important to communities today as sacred ground.
- Shockoe Bottom should be evaluated as a Traditional Cultural Property to determine its eligibility for listing on the National Register of Historic Places.
- Shockoe Bottom deserves to have full consideration of all the potential impacts that intensive transit-oriented development, induced by the DC2RVA rail project, may cause to the Richmond community's plans to memorialize and interpret the site.
- The Federal Rail Administration must take meaningful steps to minimize and mitigate these impacts to Shockoe Bottom as a part of the rail expansion project.

Second, the National Trust intends to convey to the agencies that:

- Shockoe Bottom is a National Treasure of even international significance.

- For Richmond's African American and descendant community and their allies, Shockoe Bottom is valued as sacred ground. It is an archaeological, historical, and cultural site. For a generation and more, Richmond's African American community has endeavored to tell Shockoe's stories and has struggled to restore the place, notably the accomplishments of Delegate Delores McQuinn and the Richmond Slave Trail Commission as well as the Sacred Ground Project.

- For the community, Shockoe Bottom is envisioned to be a place of commemoration, reflection, and education. It is envisioned as a cultural heritage destination, and as a Site of Conscience for truth and reconciliation. Through collaboration, Mayor Levar Stoney, with Delegate McQuinn, Councilwoman Cynthia Newbille and many others, is leading this transformation.

- Nevertheless, there is serious public concern that the Federal Rail Administration unintentionally will fail to acknowledge the importance of the place. It is essential for the leaders of the DC2RVA rail expansion project to protect historic Shockoe Bottom.

COMMONWEALTH of VIRGINIA
Office of the Governor

Aubrey L. Layne, Jr.
Secretary of Transportation

November 17, 2017

Dear Dr. John V. Moeser:

Governor McAuliffe asked me to thank you for and respond to your email regarding the DC2RVA Environmental Impact Statement. Your comments are appreciated and have been taken into serious consideration.

The Department of Rail and Public Transportation (DRPT) developed the DC2RVA Draft Environmental Impact Statement (EIS) in accordance with the National Environmental Policy Act (NEPA). One of the project study components is the identification and evaluation of cultural resources that may be impacted by the DC2RVA project, most notably archaeological sites, architectural properties, and historic districts. Above- and below-ground cultural resources in the Shockoe Bottom area of Richmond are referenced in the Draft EIS and associated technical reports in a manner consistent with the Virginia Department of Historic Resources (DHR) guidelines on cultural resource studies and per the process set forth in Section 106 of the National Historic Preservation Act of 1966.

All maps showing archaeological sites in Shockoe Bottom and elsewhere in the DC2RVA project area have been redacted from public report copies to comply with the Archaeological Resources Protection Act (1979), which limits data available to the public to protect sites from looting or other damaging activities. These maps were provided to DHR for consideration and are available to professional archaeologists upon request. Tools used during the cultural resource evaluation process included overlaying historical maps on modern aerial imagery, detailed map analysis of the proposed Shockoe Bottom Memorial Park relative to project alternatives, and careful evaluation of ways to avoid and/or limit both physical and visual changes in the area around Main Street Station. In addition, the proposed DC2RVA infrastructure designs rely upon existing piers and platforms to the greatest extent possible to limit ground disturbance in general and especially subsurface impacts in this area.

The DC2RVA team evaluated the presence of resources with a known association with the slave trade. The archeological sites associated with the slave trade in this vicinity were found to be outside areas which could be affected by construction activities for DC2RVA. These include Devil's Half Acre (44HE1053) and the Burial Ground (44HE1089), located approximately 125 feet and 200 feet, respectively, from the closest area of potential ground disturbance for DC2RVA. A district entitled "Richmond Slave District" is not on file in the SHPO archives. The built environment in this location is predominately from the postbellum era and into the twentieth century, and the only archaeological sites within the vicinity of the DC2RVA construction limits in Shockoe Bottom are at former locations of postbellum warehouses. Studies regarding cultural resources in Shockoe Bottom are ongoing, however. Additional cultural resource work is to take place in the winter and spring of 2018. Additional studies beyond the scope of the legal preservation framework for this project are also being considered as potential options for the future as mitigation for any impacts to historic properties.

DRPT appreciates your comments, and will work to address them as they continue the study. Your extensive and valuable knowledge regarding important cultural resources related to the slave trade in Richmond's Shockoe Bottom can assist DRPT in our efforts to identify significant cultural resources and to avoid adversely impacting them. To that end, DRPT staff and our cultural resources consultant would appreciate any information you may have on the "Richmond Slave District," especially its boundaries and those properties associated with it located in the vicinity of the DC2RVA construction footprint so that we may incorporate this material into our project planning and final NEPA document.

Please contact Emily Stock, DRPT's Manager of Rail Planning, with questions and for additional coordination. She can be reached by email at Emily.Stock@DPRT.Virginia.Gov. Thank you again for your comments and participation in this important process.

Sincerely,

Aubrey L. Layne, Jr.

RE: Reply to Comments on Project Effect Recommendation
Washington, D.C. to Richmond Southeast High Speed Rail Project (DC2RVA)

Dear Sharee:

Thank you for your comments regarding cultural resources and project effect associated with the Washington, D.C. to Richmond Southeast High Speed Rail project (DC2RVA), dated July 20, 2018. As you are aware, the Federal Railroad Administration (FRA), Virginia Department of Rail and Public Transportation (DRPT), and the project study team have been conducting cultural resource studies since commencing the Project in 2014. Work to date has included initiating the Project with the Virginia Department of Historic Resources (DHR, the Virginia State Historic Preservation Office), coordinating an area of potential effects (APE), completing identification- and evaluation-level technical studies, coordinating resource eligibility with the DHR and other consulting parties, and communicating with consulting parties on other aspects of the Project. In May and June 2018, data on the ensuing roster of historic properties and DHR's concurrence with FRA's effect determination were circulated to the consulting parties for review and comment. These materials were the subject of the National Trust for Historic Preservation's (National Trust) July 20 letter.

Since receipt of the July 20 letter, the FRA, DRPT, DHR, Advisory Council on Historic Preservation (ACHP), National Trust, and DC2RVA project team have held numerous exchanges regarding the content of the letter, particularly as it pertains to the Main Street Station and Shockoe Bottom area of Richmond. These dialogues have included in-person meetings, conference calls, and email exchanges. The goal of these communications was to gather additional data associated with the National Trust's feedback and the Shockoe area in general, discuss the appropriateness of the Project's APE and historic properties in this area, and identify additional parties with which to consult on the history of this area. In addition, steps to move forward with the National Historic Preservation Act of 1966 Section 106 process were also discussed. All of these dialogues came together during the October 12, 2018 on-site meeting at Main Street Station, where consulting parties, vested groups, federal, state, local agencies, and specialists met to discuss the DC2RVA Project and its potential impacts on historic properties. This letter summarizes points discussed in your July 20 letter and ensuing dialogues and decisions regarding these issues.

The National Trust's letter and recent communication center on four primary concerns: 1), expanding the APE near Main Street Station; 2), considering the Shockoe area as a Traditional Cultural Property (TCP); 3), expanding the consideration of indirect and cumulative effects for the DC2RVA Project; and 4), increasing outreach with Richmond's African-American and descendent community and others with a vested interest in the history of this area. Each of these topics are discussed below.

Expansion of the APE: The APE was initially coordinated with DHR in February 2015. The extent was based on the previous Richmond to Raleigh high speed rail study and included different APEs for above- and below-ground resources. Based on subsequent cultural resource studies, modifications to the Project design, and input from consulting parties, the roster of historic properties in the indirect APE along the general corridor has been expanded since that time to include specific resources wherein the Project has the potential to impact character-defining features of a resource (resources eligible for Criteria A, B, or C).

Regarding Shockoe, the National Trust stated that the APE is inconsistent with Section 106 regulations and specifically requested that the APE in Shockoe be enlarged to include the Lumpkins Jail/Devil's Half Acre Site (44HE1053) and Site 44HE1089, listed as the "Burial Ground for Negros" on historic maps. Expansion of the APE in this area was discussed extensively with involved agencies and presented to consulting parties and others on October 12, 2018 and during subsequent calls. Through these dialogues, FRA and DRPT, in consultation with DHR and ACHP, will not expand the APE, per se, however the National Register of Historic Places (NRHP) eligibility of several key archaeological sites is being reconsidered based on consulting party feedback and thus they are added to the indirect APE. Lumpkins Jail/Devil's Half Acre has been the subject of archaeological studies for over a decade. During that time, archaeologists have identified intact subsurface remains associated with this resource and thousands of artifacts dating to the period of significance of the site. The site, however, has never been evaluated for its NRHP eligibility. Based on archaeological findings and consulting party feedback, FRA and DRPT are assuming for this Project that the site is eligible for the NRHP under Criterion A for its association with the Richmond slave trade and under Criterion D for its archaeological potential. Since it is assumed eligible under Criterion A, it is now within the indirect APE. Although the DC2RVA Project will not impact the character-defining features of this resource, FRA and DRPT recognize the importance of this site and acknowledge the history of this area, specifically as it relates to the slave trade. As such, the site is also being considered a contributing element to the surrounding Shockoe Valley and Tobacco Row Historic District (127-0344) as part of the Project.

The Burial Ground boundaries have been estimated based on numerous historical maps, however no physical evidence of this site has been uncovered despite numerous archaeological studies. The area of the site has been extensively disturbed by past activities, including the construction of I-95. As such, the data potential and archaeological significance of this site, as well as exact boundaries, are unknown. At the request of the National Trust, the FRA and DRPT completed viewshed documentation of the mapped location of this resource to determine if it falls in the indirect viewshed. Based on this analysis and the proposed platform improvements, the resource is over 350 feet from the Project limits of disturbance and Broad Street, a raised road corridor, completely blocks the view of the recorded site area from any project modification. Given this, and through consultation with the DHR, this resource is not included in the direct or indirect APE and the DC2RVA Project would not impact the character-defining features of this resource.

Beyond these two sites, the Historic Richmond Foundation has advocated that Site 44HE1203 (listed as "Grave Yard for Free People of Color and Slaves" on historic maps) be added to the list of historic properties located in the indirect APE. This cemetery is mapped north of Hospital Street just north of Shockoe Bottom. The cemetery was in use from 1816—when the "Burial Ground for Negros" closed—until the Civil War. In May, the DHR concurred with FRA that the cemetery, in general, is potentially eligible for the NRHP under Criterion D; however, it was also determined that that time that the portion of the site within the limits of disturbance of the Project does not contribute to the overall site eligibility due to prior disturbance and development. Based on the current reevaluation and consulting party feedback, however, the FRA and DRPT have elected to accept the Historic Richmond Foundation's request to assume that this resource is eligible for the NRHP under Criterion A for its association with important events and Criterion D for its archaeological potential; it is therefore now on the roster of historic properties located in the Project's indirect APE due to its historical significance.

Considering the Shockoe area as a TCP: This concept was first presented during the June 28, 2018, DC-based Project consulting party meeting. Since that time, extensive research and coordination on TCPs in general, TCPs in Virginia, and the Shockoe area as a TCP in particular has been completed to assure that all avenues have been explored. According to the National Park Service (NPS), a TCP is: "a property that is eligible for inclusion in the [NRHP] based on its associations with the cultural practices, traditions, beliefs, lifeways, arts, crafts, or social institutions of a living community. TCPs are rooted in a traditional community's history and are important in maintaining the continuing cultural identity of the community." Data gathered as part of the TCP review has been discussed with the FRA, DRPT, ACHP, and DHR to gather input and ascertain the path forward. Based on this consultation, FRA has been determined that the Shockoe area does not meet the definition of a TCP based on the extant information at hand and its interpretation of this type of resource.

FRA and DRPT have also previously noted that this area is already part of an historic district, the Shockoe Valley and Tobacco Row Historic District. The Project will have an adverse effect on this resource per coordination with the DHR. Although the Lumpkins Jail/Devil's Half Acre Site is not formally listed as contributing resources to this district, FRA and DRPT are assuming that it contributes for the purpose of this Project, and will focus mitigation of adverse effects on slave trade studies. FRA and DRPT are deeply respectful of the importance of this area and will work with consulting parties and other vested groups to outline the mitigation criteria.

Expanding the consideration of indirect and cumulative effects for the DC2RVA Project: Based on feedback from your letter and comments received from other consulting parties, DRPT has been holding extensive discussions with other groups who have potential development projects in the area, notably the City of Richmond, who owns Main Street Station and large plots of the land in Shockoe. The goal was to understand potential future development impacts in this area. The attached letter from the City of Richmond speaks to their commitment to preserving places of historic significance in this area, thus avoiding cumulative impacts on City-owned property. Beyond City-owned land, the FRA examines projects as part of the environmental process that are planned and funded. At this time, no other projects meet these parameters. Any future development in the area would be subject to City land use plans and regulatory controls, as well as other pertinent state or federal requirements.

Increasing outreach with Richmond's African-American and descendent community and others: DRPT continues to work to expand our dialogue in this area and along the Project corridor through additional outreach. As such, we have worked with the National Trust and others to hold numerous conference calls and an on-site inclusive meeting on October 12, 2018 to gather feedback on the Project and its potential impacts to cultural resources in the Shockoe area. The meeting invitation roster included all 33 DC2RVA consulting parties as well as 23 additional individuals who represent groups with a vested interest in the history of this area and 10 agency representatives—names gathered from the National Trust, Shockoe Sacred Ground project, City of Richmond and more. For those who could not attend the meeting but expressed a desire to share feedback, we are holding one-on-one meetings and telephone calls to assure that all voices are heard. The information derived from this outreach will be included in ongoing Section 106 consultation as well as the Project's environmental document.

DRPT thanks you again for your continued consultation on the DC2RVA Project. If you have any questions on the Project, I can be reached at 804-786-1052 or Emily.Stock@drpt.virginia.gov.

Sincerely,

Emily Stock

Jennifer Mitchell, Director
Virginia Department of Rail and Public Transportation
600 East Main Street
Richmond, Virginia 23219

Dear Ms. Mitchell:

The City of Richmond is dedicated and genuinely committed to acknowledge, authenticate and commemorate Richmond's role in the painful history of enslaved Africans who passed through this area and the commerce and business derived from the trade of these families and individuals. In 1998 the City of Richmond's City Council established a Slave Trail Commission to provide leadership and make certain that the authentic history of the enslaved African and the history of slavery in Richmond was told. As evident by the numerous completed past projects under auspice of the Slave Trail Commission, as well as future planned projects and the financial commitments to accomplish them, the City of Richmond has proven its commitment to recognize this important aspect of its past, educate the public about significant events that took place in this area during the era of slavery, and assure that they are never forgotten.

Over the past two decades, the City has expanded partnerships with the Virginia Department of Historic Resources, the Office of the Governor and the General Assembly to accomplish a variety of goals and projects, specifically in Shockoe Bottom including the Devil's Half Acre, the African Burial Ground and the improvements and advancement of the Richmond Slave Trail. The City and the Commonwealth have invested over $7 million in past projects and $19 million in recent future funding to continue long-term studies which will identify future projects. This demonstrates our dedication.

Over the past 20 years the City has:

> Formalized the Slave Trail Commission and committed City funding to a host of projects (1998).
>
> Developed a Slave Trail brochure to make certain that this history was revealed in key tourism sites and in Virginia State Welcome Centers (2002).
>
> Took possession of the Winfree Cottage to preserve this post slavery story. (2004)

Acquired the Reconciliation Statue (2004).

Conducted two phases of archaeological study at the Lumpkin's Jail/Devil's Half Acre site (2006 and 2008).

Erected the Reconciliation Statue on State Property for Richmond's role in the Slave Trade triangle between Liverpool, Benin and Virginia. This is the only Reconciliation Statue for this purpose in America. (2007).

Formalized the first State apology to our Commonwealth's role in Slavery under Governor Tim Kaine, (2007).

Erected Slave Markers along the Slave Trail to reveal the history.

Placed bronze Slave Trail Markers to mark the physical slave trail.

Added night lighting to the trail.

Appealed to Governor McDonnell and the General Assembly through the leadership of the Slave Trail Commission's Delegate Delores McQuinn to fund the purchase of the African Burial Ground, fund improvements to the Slave Trail, advance the commemoration of the Lumpkin's Jail Site/Devil's Half Acre and to fund a Slavery Museum in Richmond.

Improved the gateway to the African Burial Ground from Broad Street and upgraded the grounds of the Commemorative Burial Ground site.

Developed websites dedicated to reveal the untold histories: www.lumpkinsjail.org.

Convened a Shockoe outreach group that includes hundreds of representatives of various interest groups, including the African-American descendent community, with numerous meetings, calls, emails over the past five years.

Developed a Main Street Station Archaeological Plan in conjunction with the Virginia Department of Historic Resources which includes a commitment to completing archaeological studies prior to any ground disturbing activities on City owned land in the Main Street Station Area.

Conducted background and historical research on additional sites associated with the Slave Trade in Shockoe Bottom to understand the area in context and for potential use in the creation of a future historic district that memorializes the lives and contributions of enslaved Africans.

Hired the Smith Group who designed the Smithsonian's Museum for African American History and Culture to lead our city in advancing the Lumpkin's Jail site and eventually design a museum on the site to preserve the artifacts and create a place of reflection, acknowledgement and education.

Hired the Urban Land Institute to lead in a shared vision for Shockoe initiative.

Worked closely with agencies that are studying developments in this area, including the Virginia Department of Rail and Public Transportation and the Virginia Department of Transportation, among others, to assure that initiatives have parallel goals and include the preservation of area resources as a project focus

The Story of the enslaved African experience in Shockoe Bottom is extraordinarily important to me and I selected this topic as a primary focus of my term in office. The City is working closely with the state and local agencies and numerous non-profit and descendent groups to assure a common vision for preservation in this area.

We look forward to continuing a robust dialogue that tells the history of Richmond's role in the slave trade. We thank you again for your efforts to advance the DC2RVA project.

Kind Regards,

Levar Stoney

Re: Washington, D.C. to Richmond High Speed Rail Project

Dear Ms. Stock and Ms. Barile:

The National Trust for Historic Preservation and Preservation Virginia appreciated the opportunity to participate in the in-person meeting regarding the Washington, D.C. to Richmond High Speed Rail Project (Project) in Richmond this October, as well as the conference call to discuss project effect recommendations earlier this month. We continue to appreciate the need for, and generally support the addition of, increased passenger rail capacity that this Project is intended to provide. Our goal in participating as a consulting party for this Project has continued to be to ensure that the Federal Railroad Administration (FRA) carefully considers the Project's impacts to the cultural resources in Richmond's Shockoe Bottom -- including but not limited to Lumpkin's Slave Jail/Devil's Half Acre Site and the African Burial Ground -- in conducting the Section 106 consultation for this undertaking.

This letter briefly summarizes the National Trust and Preservation Virginia's response to the FRA's correspondence regarding recommendations of adverse effect for the Project dated November 13, 2018.

Lumpkin's Slave Jail /Devil's Half Acre Site

We agree with and appreciates FRA's decision to recommend the Lumpkin's Slave Jail/Devil's Half Acre Site as eligible for listing in the National Register under Criterion A in addition to Criterion D. This is a positive step towards recognizing the importance of this site, and of the Greater Shockoe Bottom area, as well as its significance for more than only archaeological resources that are valuable for data recovery. As noted in the National

Trust's letter dated July 20, 2018, archaeological sites within Shockoe Bottom have *in-place* significance that make the resources' setting, feeling and association important aspects to maintaining their integrity.

Shockoe Bottom as a Traditional Cultural Property

In the FRA's correspondence of November 17, 2018, the agency states that based on the data currently available and gathered as a part of this Section 106 consultation, FRA has determined that the Shockoe area does not qualify as a TCP. This opinion was confirmed during the recent consulting parties' call where representatives from the Department of Historic Resources (DHR) and FRA stated that there currently is not enough information available to determine whether the African Burial Ground, the Lumpkin's Slave Jail/Devil's Half Acre Site, or other areas within Shockoe Bottom are eligible for listing in the National Register as part of a Traditional Cultural Property (TCP).[1] To make this type of determination would require intensive community engagement and significant additional research, in particular ethnographic studies to determine the continuing historic significance of the site. We continue to believe that the area is likely eligible for listing on the National Register as a TCP, but acknowledge that there is insufficient information currently available to make this determination. However, even without this formal recognition, Shockoe Bottom remains hallowed ground for many in the African American and descendant community. We suggest that further exploration of the TCP concept is certainly warranted and should be considered in making decisions regarding appropriate mitigation projects as discussed below.

Mitigation for Adverse Effects on Historic Resources in Shockoe Bottom

We have reviewed FRA's preliminary list of mitigation ideas and appreciate the opportunity to comment. We suggest that FRA consider funding: community engagement and ethnographic research regarding the current significance of the Greater Shockoe Bottom area to the African American and descendant community; additional archaeological research in Shockoe Bottom to evaluate whether the Lumpkin's Slave Jail/Devil's Half Acre Site and the African Burial Ground are part of a potential archaeological district; and funding to complete a multiple property nomination for the slave trade in Shockoe Bottom. For all of these ideas, we suggest that consulting parties and the public be deeply involved in project development.

---

[1] The Lumpkin's Slave Jail/Devil's Half Acre Site and African Burial Ground sites hold cultural importance for the African American community and for descendants of enslaved people who were imprisoned, sold, and buried in Shockoe Bottom. A TCP is a site associated "with cultural practices or beliefs of a living community that (a) are rooted in that community's history, and (b) are important in maintaining the continuing cultural identity of the community." *National Register Bulletin* 38.

The National Trust and Preservation Virginia appreciate FRA's willingness to share information throughout this process. We look forward to reviewing the proposed Memorandum of Agreement for the Project in the coming weeks.

Sincerely,

Sharee Will

Hello all,

I hope you had a great holiday!

Thank you all, again, for your continued participation in the DC2RVA rail cultural resource process. Your feedback has been invaluable! I wanted to provide a brief update and share some documents to you for your review.

Since our last set of meetings this fall and our subsequent emails and calls, we have continued to refine the list of historic properties along the corridor and work with the FRA/DRPT/DHR/ACHP to determine effects. A final effect determination was received from the DHR, and thus a final roster of historic properties (n=120) and their respective effects is attached for your reference. Most of the details of this roster have been shared with you over the past several months. This list includes all remaining requests from consulting parties and reflects the final determinations.

Concurrently, we have been working on a project Memorandum of Agreement (MOA) which outlines steps to mitigate the adverse effects to 21 resources along the corridor. A preliminary mitigation list was sent around and discussed during our meetings/emails/calls, and the list of mitigations has been refined based on your incredible feedback. Your requested changes are reflected in the MOA. The document is currently under review by the signatories (FRA, DRPT, ACHP, and DHR), but we also wanted to send it to our consulting parties for your comments. I've attached the MOA here as well as a summary table that can be used as a "cheat sheet" to see all of the mitigations in one place. This excel sheet also notes the mitigations that were added or expanded based on your feedback from the original roster.

We request that you take a look at the MOA by **January 25th** and email us your comments. As always, I'm here to answer any questions or just chat process!

Again, my sincere thanks for your contributions to date!
Best,
Kerri

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
1	500-0001	Richmond, Fredericksburg, and Potomac Railroad	Arlington County, City of Alexandria, Fairfax County, Prince William County, Stafford County, City of Fredericksburg, Spotsylvania County, Caroline County, Hanover County, Henrico County, City of Richmond	1836-1943	The RF&P opened in 1836 and eventually spanned from the Potomac River to Richmond. The corridor includes the main rail line, spurs, and associated elements such as station houses, bridges, and other structures.	Eligible under Criterion A	Adverse	
2	029-0218	Mount Vernon Memorial Highway (portion of George Washington Memorial Parkway)	Fairfax County, Arlington County	ca. 1929	The Mount Vernon Memorial Highway is an 8 ½-mile section of the George Washington Memorial Parkway from Fairfax County to the southern boundary of Alexandria. The four-lane wide highway was constructed with concrete slab construction and while much of the concrete remains intact.	Listed under Criteria A and C	No Adverse	
3	000-0045	Washington National Airport (Reagan National Airport)	Arlington County	1941	The primary/historic building is a four-story, multi-bay, airline passenger terminal constructed in the Moderne style. Property also includes six c 1941 airplane hangers and associated runways and other landscape elements.	Listed under Criteria A and C	No Adverse	
4	100-0160	George Washington Junior High School, 1005 Mt. Vernon Avenue	City of Alexandria	1935	The resource is a three-story, multi-bay school building constructed in the Art Deco style originally in a rectangular form. The building is constructed of large, cut, grey sandstone and brick laid in an irregular bond.	Potentially Eligible under C (Assuming eligible for undertaking)	No Effect	
5	100-0133	Parker-Gray Historic District/Uptown	City of Alexandria	ca. 1810	The district covers over 45 blocks in the northwestern quadrant of Old Town Alexandria and abuts the Alexandria Historic District. It consists mainly of small row houses and townhomes built in the mid-to-late nineteenth century.	Listed under Criteria A and C	No Adverse	
6	100-0137	Rosemont Historic District	City of Alexandria	ca. 1900	The district is a planned, residential subdivision that is located northwest of Old Town Alexandria. It consists mainly of small, middle-class houses built between 1908 and 1940.	Listed under Criteria A and C	No Adverse	
7	100-0124	Alexandria Depot, 110 Callahan Drive	City of Alexandria	1905	The train depot known as Alexandria Union Station at 110 Callahan Drive is a one-and-one-half-story, multi-bay, passenger depot constructed in the Colonial Revival style	Listed under Criteria A and C	No Adverse	
8	100-0128	George Washington National Masonic Memorial	City of Alexandria	ca. 1922	The resource at 101 Callahan Drive is a nine-story, multi-bay, memorial and museum sitting on a designed knoll constructed in the Classical Revival style.	Listed under Criterion C and Criteria Consideration F	No Effect	
9	100-0277	Phoenix Mill, 3642 Wheeler Avenue	City of Alexandria	ca. 1776	The building is a two-story, three-bay, industrial building. It is purportedly the "sole remaining example of a mill structure in Alexandria."	Eligible under Criteria A and C	No Adverse	

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
10	029-0953	Old Colchester Road, Potomac Path, King's Highway	Fairfax County	ca. 1664	This two-lane asphalt road runs northeast from the Occoquan River for approximately 4 miles to the intersection with Route 1 in Lorton. Old Colchester Road played an important role in the county's early transportation history.	Eligible under Criterion A	No Effect	
11	029-0043	Colchester Arms, Fairfax Arms, 10712 Old Colchester Road	Fairfax County	ca. 1756	The building ais a one-and-a-half story, four-bay tavern constructed with an irregular four-room plan. The timber-framed structural system rests on a continuous, raised-basement, stone foundation.	Listed under Criteria A and C	No Adverse	
12	500-0001-0022	RF&P Bridge over Occoquon River	Prince William County	1915	The resource is a through-truss, camelback railroad bridge constructed close to the middle of the height of this type of structure, 1870-1930. Although once common, few have survived.	Eligible under Criterion C; Contributing to RF&P HD	Adverse	500-0001-0022
13	076-0023	Rippon Lodge	Prince William County	1747	One of the oldest houses in Prince William County, the vista from Rippon Lodge looking down Neabsco Creek (and future site of the railroad) was documented by Benjamin Latrobe.	Listed under Criteria A and B	Adverse	
14	44ST1223	Civil War Campsite	Stafford County	1862-1863	This site represents a Civil War campsite occupied during the winter of 1862–1863 when the Union Army was ordered into winter quarters.	Potentially Eligible under Criteria A and D (Assuming eligible for undertaking)	Adverse	
15	111-0147	Fredericksburg & Spotsylvania Co. Battlefields National Military Park & Cemetery, Lee Drive	City of Fredericksburg	1862	The resource is a Civil War battlefield park composed of earthworks, cannons, and informational markers in addition to a total of 429 non-archaeological cultural resources, 350 of which are considered contributing to its significance.	Listed under Criteria A and D	No Adverse	
16	111-5295	Battle of Fredericksburg I	City of Fredericksburg	1862	The battlefield is the location of a Civil War battle that occurred between December 11 and December 15, 1862. Union Major General Ambrose Burnside and his troops battled General Robert E. Lee's Confederate men, resulting in a Confederate victory. The battlefield continues to retain a high level of integrity.	Eligible/Potentially Eligible under Criterion A	No Adverse	
17	111-5296	Battle of Fredericksburg II	City of Fredericksburg	1863	The Battlefield is a 12,694.2-acre battlefield associated with a Civil War battle of the same name, which took place on May 3, 1863. Despite expansive residential, commercial, and industrial development around the battlefield and the Fredericksburg, it continues to retain a high level of integrity	Eligible/Potentially Eligible under Criterion A	No Adverse	
18	111-0132-0025	Rappahannock River Railroad Bridge and Associated Structures/Platform	City of Fredericksburg	1927	This multiple-span, open-spandrel, concrete-arch bridge is an excellent and rare surviving example of a reinforced-concrete arch railroad bridge within this region of Virginia. It was erected when the station and tracks were elevated for automobile traffic pass through in downtown Fredericksburg.	Eligible under Criterion C; Contributing to Fredericksburg HD and RF&P HD	Adverse	111-0132-0025

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
19	44SP0187	Bridge/Marye's Mill	City of Fredericksburg	19th century	Terrestrial portion of the site occupies the location of Marye's Mill, depicted in an 1863 photograph taken during the Second Battle of Fredericksburg and mills identified on Gray's (1878) map of late-nineteenth-century Fredericksburg. Includes cut stone piers that are now located under the waters of the Rappahannock River, which may be associated with earlier railroad structures that are no longer extant.	Potentially Eligible under Criteria A and D (Assuming eligible for undertaking)	Adverse	
20	111-0132	Fredericksburg Historic District	City of Fredericksburg	post 1727	The district is a 200-acre area that comprises the city's downtown commercial area, adjacent industrial area, and some of the surrounding residential blocks. This part of Fredericksburg boasts a wide variety of infrastructure that ranges in date from the early eighteenth century throughout the late twentieth century	Listed under Criterion C	Adverse	
21	44SP0688	Block 49/Train Station	City of Fredericksburg	Late Archaic; 19th/20th c	Archaeological remains of several dwellings, outbuildings, and industrial features as identified by UMW in the early 1990s	Potentially Eligible under Criteria A and D (Assuming eligible for undertaking)	Adverse	
22	111-0067/ 111-0132-0505	Dr. Charles Mortimer House, House, 213 Caroline Street	City of Fredericksburg	1764-1801	The home is a two-story, five-bay, Federal-style single-family dwelling built circa 1764 in the Georgian style. Dr. Charles Mortimer was an important figure in Fredericksburg's history. The house is also one of a handful of high-style Georgian buildings in Fredericksburg and it is the only example with its original outbuildings.	Eligible under Criteria B and C; Contributing to Fredericksburg HD	No Effect	23	111-0132-0458	Robert Adams Residence, 528 Caroline Street	City of Fredericksburg	1891	The two story, two-bay resource was built in 1891 as a high-style Italianate dwelling. No other high-style, Italianate dwellings are located within the boundaries of the Fredericksburg Historic District.	Eligible under Criterion C; Contributing to Fredericksburg HD	No Effect	24	111-0132-0147	Shiloh Baptist Church New Site, 521 Princess Anne Street	City of Fredericksburg	1890-1968	This 2-story, multi-bay, Colonial Revival-style church was constructed in 1890 and has been an important part of the ante- and post-bellum, African-American community, playing a role in early African-American education and the Civil Rights Movement in Fredericksburg.	Eligible under Criteria A and C and Criteria Consideration A; Contributing to Fredericksburg HD	No Effect	25	44SP0687	Block 48/Train Station	City of Fredericksburg	Late Archaic; 19th/20th c	Archaeological remains of several dwellings, outbuildings, and industrial features as identified by UMW in the early 1990s	Potentially Eligible under Criteria A and D (Assuming eligible for undertaking)	Adverse	
26	111-0132-0704	Fredericksburg Train Station, 200 Lafayette Boulevard	City of Fredericksburg	1910	The depot is a two-story, five-bay building constructed in the Neoclassical style designed by notable local architect Peck Heflin. The adjacent rail tracks were raised in 1927.	Eligible under Criteria A and C; Contributing to Fredericksburg HD	No Adverse	27	111-0132-0126	The 1770 House, 227 Princess Anne Street	City of Fredericksburg	1770	The home is a one-and-one-half-story dwelling constructed circa 1770 in the Tidewater tradition with some Georgian-style elements. It is a unique example of an eighteenth-century, working-class home in this part of town.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Fredericksburg HD	No Effect	
N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
28	111-0132-0020	Purina Tower	City of Fredericksburg	1916	The resource is a one-and-one-half story commercial building with a tall grain elevator at the northwest corner. The tower has become an important landscape landmark within the community.	Eligible under Criteria A and C; Contributing to Fredericksburg HD	No Adverse	111-0132-0020
29	111-0132-0522	House, 314–316 Frederick Street	City of Fredericksburg	1851	This is a two-story, four-bay vernacular brick duplex. Oral history states that the building was used as a slave jail in the antebellum period.	Eligible under Criteria A and B; Contributing to Fredericksburg HD	No Adverse	111-0132-0522
30	111-0009-0795	Pulliam's Service Station, 411 Lafayette Boulevard	City of Fredericksburg	ca. 1937	This resource is a one-story filling station constructed in the Spanish Revival style. It still retains its original materials and configuration.	Eligible under Criteria A and C; Contributing to Fredericksburg HD	No Adverse	111-0009-0795
31	111-0009	Fredericksburg Historic District Extension	City of Fredericksburg	1794-1967	The district extension is a large area that includes a wide variety of resources immediately surrounding the city's downtown core including residences, commercial buildings, and churches dating to the 19th and 20th c.	Eligible under Criteria A and C	No Adverse	
32	088-5181	Salem Church Battlefield (Banks Ford Battlefield)	Spotsylvania County, City of Fredericksburg	1863	The battlefield includes the land where Hay's and Hoke's brigades attacked the Union Sixth Corps in 1863. It includes Confederate earthworks, Salem Church, and the path of the Plank Road.	Eligible under Criterion A	No Adverse	
33	088-5364	Virginia Central Railway Historic District	City of Fredericksburg, Spotsylvania County, and more	1853	The district is a 38-mile-long railroad corridor that extends west from the CSX railroad (formerly the RF&P) in Fredericksburg to the town of Orange encompassing rail-related structures, sites, and landscape features. The 3.5-mile long eastern section is eligible.	Eligible under Criterion A	No Adverse	
34	111-0145	Fredericksburg Gun Manufactory	City of Fredericksburg	ca. 1775	The Fredericksburg Gun Manufactory is an archaeological site that is at least 75 percent intact. The remains of the manufacturing facility are located beneath a paved asphalt parking lot for a public school.	Listed under Criteria A and D	No Adverse	
35	088-0254	Slaughter Pen Farm, 11232 Tidewater Trail (Wayside Farm or Pierson Farm)	Spotsylvania County	ca. 1861	Slaughter Pen Farm, also known as Wayside Farm or Pierson Farm, is a 19th century farm complex composed of a two-story, three-bay, Italianate-style, single-family dwelling, three agricultural outbuildings, a shed, one kitchen, a slave quarters, and a well.	Eligible under Criterion A	No Adverse	
36	44SP0468	Earthwork/ Jackson's Earthwork	Spotsylvania County	1861	This resource includes a set of earthworks within a larger archaeological site. The area is almost totally enclosed by lines of military shelter trenches constructed prior to or following the First Battle of Fredericksburg.	Potentially Eligible under Criteria A, C and D (Assuming eligible for undertaking)	Adverse	

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
37	088-0039	La Vue, 3232 LaVue Lane (Prospect View)	Spotsylvania County	ca. 1848	La Vue, also known as Prospect View, is a two-story, three-bay, single-family dwelling constructed in the Greek Revival style with an L-plan.	Listed under Criterion C	No Adverse	
38	016-0092	Fairfield Plantation Office, Jackson Shrine, 12019 Stonewall Jackson Road	Caroline County	1828	The resource is a one-and-a-half-story frame building; it once served as the office for the 740-acre Fairfield Plantation and is the only surviving building. On May 10, 1863, Confederate General Thomas Jonathan “Stonewall” Jackson died at the site after being wounded at the Battle of Chancellorsville.	Eligible under Criteria A and C	No Adverse	
39	016-0208	House, 12096 Guinea Drive	Caroline County	ca. 1900	The resource is a is a one-and-a-half-story vernacular dwelling with Queen Anne and Craftsman elements. The house was built from a kit purchased from the Sears & Roebuck Company.	Potentially Eligible under Criterion C (Assuming eligible for undertaking)	No Effect	
40	016-5165	Excelsior Industry of Caroline County MPD	Caroline County	ca. 1925-1960	This is a thematic collection of resources that are associated with the manufacture of excelsior, Caroline County’s largest industry in the early twentieth century	Eligible under Criteria A and C	No Adverse	
41	016-0223	First Woodford Post Office	Caroline County	1874	This small frame office building is located immediately adjacent to the railroad and is associated with the Woodford Excelsior Company, Caroline County’s first excelsior manufacturer. It was the focal point of the operation.	Eligible under Criteria A and C	No Adverse	
42	016-0222	Woodford Freight & Passenger Depot, Woodford Road	Caroline County	ca. 1900	The resource is a long, rectangular, one-story, framed building constructed circa 1900. The building served a combined function as both a freight depot and a passenger depot and was one of five original stops along the RF&P in Caroline County.	Eligible under Criteria A and C; Contributing to RF&P HD	No Adverse	
43	016-0220	Carolina Mansion, 11146 Woodford Road	Caroline County	ca. 1900	The ornate, two-and-a-half-story, wood framed dwelling was designed in the Queen Anne style with Classical detailing. The building represents housing constructed in the area in the early-twentieth century, when the RF&P and new manufacturing enterprises brought economic prosperity to the local region.	Potentially Eligible under Criterion C (Assuming eligible for undertaking)	No Effect	
44	016-5136	Milford Historic District	Caroline County	ca. 1880–1960	The district was originally established in the late-eighteenth century as a tobacco trading center. In 1836, the RF&P Railroad was constructed through the area and Milford soon became the largest of the small communities in the county situated along the railroad.	Eligible under Criteria A and C	No Adverse	
45	016-0270	Milford State Bank, 15461 Antioch Road	Caroline County	ca. 1910	The bank is a two-story brick building constructed in the Classical Revival style. The building’s façade is divided into five distinct bays via brick pilasters. It is the only Classical Revival building as well as the only bank in the village of Milford.	Potentially Eligible under Criterion C (Assuming eligible for undertaking)	No Adverse	

N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
46	016-0286	Coghill-Jeter Store, 22275 Penola Road; Penola, 16095 Polecat Lane	Caroline County	1880	The resource is a two-story, wood-framed commercial building. It is the only surviving commercial building in the largely abandoned village of Penola and is representative of the small country stores once found in crossroads communities and railroad stops throughout the area.	Eligible under Criteria A and C	No Adverse	47	042-0123	North Anna Battlefield	Hanover County	1864	The North Anna Battlefield was the location of one of the most important Civil War campaigns in the state. It was the culminating point of the 1864 Overland Campaign. The battlefield is composed of defensive earthworks and trenches, as well as other elements predating and contemporaneous with the battle.	Eligible under Criterion A	No Adverse	
48	042-5448	Doswell Historic District	Hanover County	ca. 1880-1940	Doswell Historic District encompasses a rural community that was once a center of major activity along road and rail networks. Nearly a dozen historic properties are located within the district's boundaries.	Eligible under Criteria A and C	Adverse	
49	042-0093	Doswell Depot and Tower, 10577 Doswell Rd	Hanover County	ca. 1928	The current depot is a well-balanced design with classical-styled architectural features. The nearby, contemporaneous "HN tower" housed electrical systems managing an interlocking device permitting safe crossing of trains over both railroads.	Eligible under Criteria A and C; Contributes to RF&P HD and Doswell HD	Adverse	50	042-5307	Taylorsville Road Historic District	Hanover County	ca. 1900-1935	The community was settled in the early–nineteenth century and has remained active to present day. Most built features are residential and agricultural in nature within the district and reflect architectural styles and construction methods from the late-nineteenth to mid-twentieth century.	Eligible under Criteria A and C	No Adverse	
51	042-0556	Hoopers, 11108 McConnell Lane	Hanover County	1810	Resource was recorded during the LOD survey document but it was not accessible during the study; DHR suggested that it be considered potentially eligible for the project on April 4, 2018	Not evaluated; Not accessible (Assuming eligible for undertaking)	No Effect	
52	166-5073	Berkleytown Historic District	Hanover County	ca. 1900-1965	The district is typical of many small-town, twentieth-century, African-American neighborhoods in that it was relatively isolated from the formal downtown core and is dotted by small vernacular dwellings.	Eligible under Criterion A	Adverse	
53	166-0001	Ashland Historic District	Hanover County	1850-1950	The Ashland Historic District, with its large collection of late-Victorian and Edwardian frame dwellings and its brick commercial core, all set among hundreds of trees, survives as a fine example of a railroad and streetcar suburb preserving much of its turn-of-the-century character.	Listed under Criteria A and C	No Adverse	
54	166-0001-0015	Business Office, Randolph-Macon , 310 N. Center Street	Hanover County	ca. 1895	Historically known as the Blackwell House, it is an elaborate and outstanding example of Queen Anne-styled architecture with Eastlake elements in this historic community.	Potentially Eligible under C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	
N-S Order	DHR ID	Name/Description	City/County	Date / Time Period	Description	NRHP Eligibility	DHR Effect Determination	Image
55	166-5072	Randolph-Macon College Historic District Expansion	Hanover County	ca. 1900-1960	The Randolph-Macon College Historic District Expansion highlights a significant part of campus that developed between the early-twentieth century up to the mid-1960s when a substantial building boom occurred.	Potentially Eligible under Criteria A and C (Assuming eligible for undertaking)	No Effect	
56	166-0002	Randolph-Macon College Historic District	Hanover County	1872-1950	The district includes the 85-acre college campus and all associated buildings, structures and landscape features. This is the oldest Methodist-related college in the United States still in operation	Listed under Criteria A and C	No Effect	
57	166-0001-0008	Ashland Station Depot, 112 N. Railroad Avenue	Hanover County	1910	The one-story, five-bay, brick depot is said to have been designed by W. P. Lee to replace a previous circa-1890 station that had burned. The building appears little altered and is a good example of a Colonial Revival-styled depot.	Potentially Eligible under A and C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	58	166-5041	Priddy House, 107 Stebbins Street	Hanover County	ca. 1926	This one-and-a-half-story, four-bay, single-family dwelling is an outstanding example of Craftsman-styled domestic architecture in this community.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	59	166-0001-0055	Emily Gray House, 702 S. Center Street	Hanover County	ca. 1850	Historically known as the Emily Gray House, this one-and-a-half-story, three-bay resource is an outstanding example of Second Empire-styled architecture.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	60	166-0001-0060	Fleming Fox House, 708 S. Center Street	Hanover County	ca. 1894	Historically known as the Fleming Fox House, this two-and-a-half-story, four-bay dwelling is an outstanding example of a Colonial Revival-styled dwelling with Free Classic elements.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	61	166-0036	MacMurdo House, 713 S. Center Street	Hanover County	ca. 1858	This two-story, three-bay, Greek Revival, single-family dwelling is one of the few buildings of its style in Ashland, and it has excellent historic integrity.	Potentially Eligible under Criterion C (Assuming eligible for undertaking); Contributing to Ashland HD	No Effect	62	166-0037	Hugo House/Lefebvre House, 904 S. 118	020-5378	VEPCo Power Transmission Line	Chesterfield County	ca. 1910	The VEPCo Line was built The line was built sometime between 1910 and 1930, likely between 1925 and 1927, providing high-voltage electric power service to the people in the area. It is approximately one mile long, and it is the only remaining portion of the line that once extended from Richmond to Petersburg.	Eligible under Criteria A and C	No Effect	
119	020-0140	Circle Oaks/4510 Centralia Road	Chesterfield County	1840	This resource is a two-story, wood frame single-family dwelling featuring a two-story, wrap around veranda. Property includes a small tenant house (perhaps servant’s quarters) and a kitchen. Circle Oaks is the oldest and largest building in the community.	Eligible under Criterion C	No Adverse	120	020-0552	Centralia Post Office	Chesterfield County	1905	The one-story building was the center of the community of Centralia. It was constructed to face east onto the rail tracks to accommodate rail travelers through this area during the economic boom of the pre-World War I days.	Eligible under Criterion A	No Adverse	
DRAFT/MEMORANDUM OF AGREEMENT AMONG THE VIRGINIA HISTORIC PRESERVATION OFFICE, THE FEDERAL RAILROAD ADMINISTRATION, ADVISORY COUNCIL OF HISTORIC PRESERVATION, AND THE VIRGINIA DEPARTMENT OF RAIL AND PUBLIC TRANSPORTATION REGARDING THE WASHINGTON, D.C. TO RICHMOND, VIRGINIA SOUTHEAST HIGH SPEED RAIL PROJECT

WHEREAS, the Federal Railroad Administration (FRA) and the Federal Highway Administration, in cooperation with North Carolina Department of Transportation and Virginia Department of Rail and Public Transportation (DRPT), completed a Tier I Final Environmental Impact Statement and Record of Decision in accordance with the National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 *et seq.*) in July and October 2002, respectively, for the proposed Southeast High Speed Rail corridor from Washington, D.C. to Charlotte (SEHSR Project), which determined the preferred corridor for detailed analysis in Tier II environmental studies for individual portions of the larger corridor; and

WHEREAS, the DRPT proposes to construct a 123-mile portion of the SEHSR Project that involves construction of infrastructure improvements to support increased frequency and higher-speed intercity passenger rail service in the travel corridor between Washington, D.C. and Richmond/Centralia, Virginia (DC2RVA), such as constructing additional main line tracks and track crossovers, straightening curves in existing tracks, improving intercity passenger stations and station areas, improving sidings and signals, and implementing roadway crossing safety improvements, within a long-established surface transportation corridor (the Project); and

WHEREAS, the FRA is the Project's lead federal agency for Tier II environmental study under the NEPA and pursuant to the NEPA, FRA prepared and published a Draft Environmental Impact Statement (Draft EIS) on September 8, 2017, and a Final Environmental Impact Statement (Final EIS) on DATE for the Project; and

WHEREAS, this Memorandum of Agreement (MOA) among the Virginia Historic Preservation Office (Virginia SHPO), the FRA, the Advisory Council on Historic Preservation (ACHP), and the DRPT regarding the Project addresses stipulations relating to the effect of the Project on historic properties; and

WHEREAS, a Programmatic Agreement among FRA, the Virginia SHPO, North Carolina State Historic Preservation Office, the Virginia DRPT, the North Carolina Department of Transportation, Rail Division, and the ACHP was signed on April 12, 2016 for the SEHSR Project (the SEHSR PA); and

WHEREAS, this MOA was developed in accordance with Stipulation VIII of the SEHSR PA; and

WHEREAS, the FRA anticipates receiving a future request from DRPT to provide federal financial assistance to construct the Project, including activities such as design, property acquisition, and demolition, though funding sources have not yet been determined, and it is expected that there will be a mix of federal, state and local funding which may be available in phases; and

WHEREAS, if FRA provides federal financial assistance to construct the Project, the Project would constitute an undertaking under Section 106 of the National Historic Preservation Act (NHPA) as amended (54 U.S.C. § 306108) (Section 106); and

WHEREAS, pursuant to the NHPA, the FRA is required to take into account the effects of its undertakings on properties included in or eligible for inclusion in the National Register of Historic Places (NRHP), including consultation with other parties, and to provide the ACHP a reasonable opportunity to comment prior to commencement of work on the Project; and

WHEREAS, the FRA is the lead federal agency for compliance with Section 106; and

WHEREAS, pursuant to 36 C.F.R. § 800.2(c)(4), the FRA has requested the DRPT participate in consultation and, by letter dated December 11, 2014, has authorized the DRPT to initiate consultation with the Virginia SHPO and other consulting parties for the Project; and

WHEREAS, pursuant to 36 C.F.R.§ 800.2(c)(2), the FRA invited the Pamunkey Indian Tribe, the only federally recognized tribe at the time, to participate in consultation in a letter sent on July 10, 2015; and

WHEREAS, pursuant to 36 C.F.R.§ 800.2(c)(2), the FRA invited the Chickahominy Indian Tribe, Eastern Chickahominy Indian Tribe, Upper Mattaponi Indian Tribe, Rappahannock Indian Tribe, Nansemond Indian Tribe, Monacan Indian Tribe, and Catawba Indian Nation to participate in consultation, upon receipt of Federal recognition, in letters dated February 13, 2018; and

WHEREAS, on February 23, 2018, the Upper Mattaponi Indian Tribe accepted the FRA's invitation; and

WHEREAS, the remaining tribes did not respond to the invitation, but FRA is assuming that the Virginia-based tribes (Pamunkey Indian Tribe, Chickahominy Indian Tribe, Eastern Chickahominy Indian Tribe, Rappahannock Indian Tribe, Nansemond Indian Tribe, and Monacan Indian Tribe) are consulting parties and are treating them as such; and

WHEREAS, pursuant to 36 C.F.R. § 800.2(c)(5), the FRA, invited the following groups to be consulting parties in the development of the MOA between January 2015 and July 2018, and they have elected to participate: American Battlefield Protection Program (ABPP), National Park Service (NPS)- Northeast Regional Office, NPS- Captain John Smith Chesapeake National Historical Trail, NPS- Fredericksburg Division, NPS- George Washington Memorial Parkway, NPS- National Capital Region, NPS- Potomac Heritage National Scenic Trail, NPS- Richmond Division, NPS- Washington-Rochambeau National Historical Trail, Marine Corps Base Quantico, Alexandria Archaeology, Arlington County, Caroline County, City of Alexandria, City of Fredericksburg, City of Richmond, Hanover County, Prince William County, Town of Ashland, Ashland Museum, Central Virginia Battlefields Trust (CVBT), Civil War/Battlefield Preservation Trust (CWT), Historic Fredericksburg Foundation, Inc. (HFFI), Historic Richmond Foundation, Preservation Virginia, and the National Trust for Historic Preservation (NTHP); and

WHEREAS, pursuant to 36 C.F.R. § 800.2(c)(5), the FRA invited the following groups to be consulting parties to the Project on January 6, 2015 and each group either elected to not participate or did not reply to the invitation: Fairfax County, Henrico County, Spotsylvania County, Stafford County, ACL & SAL Railroad Historical Society, Center for Neighborhood Revitalization, Arlington Historical Society, Caroline Historical Society, Chesterfield Historical Society, Hanover County Historical Society, Inc., Henrico County Historical Society, Historic Alexandria Foundation, Historic Prince William, Inc., Historical Society of Fairfax County, Virginia, Inc., and Stafford County Historical Society; and

WHEREAS, the Draft EIS, Final EIS, 49 U.S.C. § 303 evaluations, and supporting Virginia SHPO-reviewed technical reports, provide background information to this MOA (see Appendix A for a full list); and

WHEREAS, pursuant to 36 C.F.R. § 800.4(a)(1) and as defined in 36 C.F.R.§ 800.16(d), the FRA in consultation with the Virginia SHPO determined that the archaeological Area of Potential Effects (APE) for this Project is the entire area of ground disturbing activities and staging areas for rail and road modifications, to include construction, along the 123-mile corridor and the Virginia SHPO concurred in a letter dated February 2, 2015; and

WHEREAS, pursuant to 36 C.F.R. § 800.4(a)(1) and as defined in 36 C.F.R. § 800.16(d), the FRA, in consultation with the Virginia SHPO, determined the APE for above-ground resources is the entire area of ground disturbing activities and staging areas plus any areas within the viewshed of the corridor where indirect affects to a resource’s setting and feeling could occur, typically comprising a 500-foot wide corridor along all sides of the limits of disturbance and as modified in urban areas and near proposed overpasses; and

WHEREAS, pursuant to 36 C.F.R. § 800.4(b) and Stipulation VI of the SEHSR PA, DRPT conducted identification and evaluation-level architectural and archaeological investigations of the entire APE between 2015 and 2018, and the results of the cultural resource investigations have been coordinated with the Virginia SHPO and other Consulting Parties; and

WHEREAS, a total of 120 historic properties listed in, eligible for, or assumed eligible for the NRHP have been identified within the Project APE, and FRA determined, in consultation with the Virginia SHPO and other Consulting Parties, that the Project will have an adverse effect on twenty-one (21) of these historic properties (listed north to south; see Table 1 and Appendix B for additional details and mapping): Richmond, Fredericksburg, and Potomac Railroad (RF&P) (Virginia Department of Historic Resources [DHR] Inventory No. 500-0001), RF&P Bridge over Occoquan River (DHR Inventory No. 500-0001-0022), Rippon Lodge (DHR Inventory No. 076-0023), Site 44ST1223- Civil War Campsite, Rappahannock River Railroad Bridge and Associated Structures/Platform (DHR Inventory No. 111-0132-0025), Site 44SP0187-Bridge/Marye’s Mill, Fredericksburg Historic District (DHR Inventory No. 111-0132), Site 44SP0688- Block 49/Train Station, Site 44SP0687- Block 48/Train Station, Site 44SP0468- Earthwork/ Jackson's Earthwork, Doswell Historic District (DHR Inventory No. 042-5448), Doswell Depot and Tower (DHR Inventory No. 042-0093), Berkleytown Historic District (DHR Inventory No. 166-5073), Laurel Industrial School Historic District (DHR Inventory No. 043-0292), Main Building/Robert Stiles Building (DHR Inventory No. 043-0292-0001), Shockoe Valley & Tobacco Row Historic District (DHR Inventory No. 127-0344), Site 44HE1098- Main Street Station Parking Lot/Railroad, Site 44HE1097-Railroad, Warehouse, Main Street Station and Trainshed (DHR Inventory No. 127-0172), Seaboard Air Line Railroad Corridor (DHR Inventory No. 127-6271), and Site 44HE1094-Warehouse; and

WHEREAS, pursuant to 36 C.F.R. § 800.6(c)(2)(iii), the FRA has asked the DRPT to be an Invited Signatory to this MOA; and

WHEREAS, pursuant to 36 C.F.R. § 800.6(a)(1), the FRA informed the ACHP of the finding of adverse effect on June 20, 2018; and

WHEREAS, pursuant to the SEHSR PA, the ACHP will participate in the development of this MOA and will be a Signatory to this MOA; and

WHEREAS, the list of historic properties project effects, and mitigation strategies included in this MOA formulated by the FRA, the DRPT, ACHP, and the Virginia SHPO, have been disseminated to the Consulting Parties by DRPT through numerous emails, letters, and in-person meetings held by DRPT in Richmond, Fredericksburg, and Washington, D.C., as well as through dissemination of hard copies of the draft MOA on December 28, 2018 (see Appendix C for a list of correspondence); and

WHEREAS, pursuant to 36 C.F.R. § 800.2(d) the FRA invited public input on the Project and history-related studies through public information meetings at numerous venues held in November 2014, June 2015, December 2015, October 2017, and October 2018, and through numerous in-person meetings and emails with individual property owners and other interested parties; and

WHEREAS, the FRA and DRPT have shared with the public information about the overall Project, including its effects on historic properties, multiple times via the NEPA process as outlined in the Final EIS; and

NOW, THEREFORE, in anticipation of the funding for and the development of the Project, in consideration of the mutual promises contained herein and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged**,** and in order to comply with the NHPA and related regulations, the FRA, the DRPT, ACHP, and the Virginia SHPO (collectively referred to as the Signatories) agree that the Project shall be implemented in accordance with the following stipulations in order to take into account the effects of the Project on historic properties.

STIPULATIONS

The FRA, in coordination with the DRPT, shall ensure that the following stipulations are carried out:

I. APPLICABILITY

A. This MOA is binding on FRA only if FRA provides financial assistance for the construction of the Project.

B. Notwithstanding Stipulation I.A., this MOA applies to all of DRPT's activities necessary to advance the Project toward and/or through construction, including, but not limited to, further design, acquisition of property for the Project, demolition of acquired properties, and construction that are funded with any amount of financial assistance from FRA or non-federal funds.

C. Nothing herein will be interpreted as agreement by DRPT that Section 106 applies to other projects with independent utility that use exclusively non-federal funds.

II. MITIGATION MEASURES FOR ADVERSELY AFFECTED HISTORIC PROPERTIES (listed north to south)

A. RF&P Railroad (DHR Inventory No. 500-0001)

1. Within one (1) year of the receipt of funding for Project construction in their respective areas, the DRPT shall document, or cause to be documented, all bridges that are to be removed as a result of the Project and are contributing elements to the RF&P. The DRPT shall prepare, or cause to be prepared, photographic documentation of each structure consistent with guidance found in "Photographic Documentation for National Park Service Basic Survey" and DHR's "Photographic Documentation for Virginia Department of Historic Resources (DHR) Survey" (Updated 2016); and complete a Virginia SHPO Intensive Level Survey form for each structure in the Virginia SHPO's Virginia-Cultural Resource Information System (VCRIS). The DRPT shall also ensure

that each structure is documented in a written report. The report shall address, at a minimum, the physical description and historical context of each structure. The DRPT shall submit the photographs, VCRIS form, and report concurrently to the FRA, Virginia SHPO, property owner, and Consulting Parties for review and comment, as appropriate. The DRPT shall disseminate final copies to the FRA, Virginia SHPO, property owner, and the Virginia Historical Society, for their collections, and to other Consulting Parties upon request. Final VCRIS forms and associated packets will be given to the DHR at this time for their archives.

2. Within one (1) year of the receipt of funding for Project construction, as described under Stipulation V(C), the DRPT shall complete, or cause to be completed, two oral histories of past and present RF&P and/or CSX Transportation (CSX-T) employees who have extended tenures with the resource and particularly with historic structures along the corridor, if such individuals are available. Interviews shall be taped, and transcriptions of the interviews shall be submitted to the Virginia SHPO, the Library of Virginia, the Virginia Historical Society, HFFI, and the Richmond History Center for their collections, and other Consulting Parties upon request.

3. Within four (4) years of receipt of Project construction funding as described in Stipulation V(C), the DRPT shall create, or cause to be created, a web-based "story map" highlighting the 120 historic properties located within the project APE. The story map will include photographs, narratives, and mapping details of all resources (as appropriate to comply with the Archeological Resources Protection Act of 1979) digitally tied to an overall GIS-based map of the project corridor. Draft materials for the story map shall be submitted concurrently to the FRA, Virginia SHPO, and Consulting Parties for review and comment, as appropriate. The hosting location for the story map will also be discussed at this time. The DRPT shall finalize the story map and notify the FRA, Virginia SHPO, and Consulting Parties when the webpage goes live.

B. RF&P Bridge over Occoquan River (DHR Inventory No. 500-0001-0022)

1. Draft designs for the new bridge over the Occoquan River shall be compatible with the architectural and historic character of the existing structure and nearby historic properties. The DRPT shall submit draft design plans for the new bridge at the schematic, 30%, 65%, and 90% stages concurrently to the FRA, Virginia SHPO, property owner, and Consulting Parties for review and comment. The design packet shall include a set of bridge plans and elevations, as well as a schematic showing the proposed bridge design in relation to the existing Bridge over Occoquan River to show proposed visual modifications.

2. Within one (1) year of the receipt of funding for Project construction in this segment, the DRPT shall produce, or cause to be produced, measured drawings of the existing RF&P Bridge over the Occoquan River prior to any alterations. The drawings shall conform to the guidelines specified by the NPS as set forth

in Historic American Buildings Survey/Historic American Engineering Record (HABS/HAER) Guidelines (http://www.cr.nps.gov/hdp/standards/haerguidelines.htm).

3. Concurrent with the measured drawings, DRPT shall engage a professional photographer with experience in preparing large-format, black-and-white, archival-quality photographic documentation for HAER and HAER-type documentation projects to complete large-format photographs of the existing RF&P Bridge over Occoquan River. Photographs shall comply with HABS/HAER Photographs Specifications and Guidelines (http://www.cr.nps.gov/hdp/standards/HABS/photospecs.pdf) and DHR's "Photographic Documentation for Virginia Department of Historic Resources Survey (Updated 016). Negatives and print sizes shall be 4" x 5". Negatives and prints shall be processed, labeled, and packaged according to HABS/HAER archival standards. A list of photo captions (index to photos) and a site plan of the building showing the location and direction of the photographs (key to photos) shall be included.

   Photographic views shall show the bridge and associated railway, as well as the surrounding landscape. Overview and detail photos of the bridge shall be provided, documenting as much as possible of the engineering and construction methods for the property including exterior elevations and detailed views of significant architectural or historical features.

4. Upon completion of the measured drawings and large-format photography, DRPT shall prepare or cause to be prepared a first draft HAER Outline Format report documenting the bridge. The report shall include any archival research collated on the history of the bridge as it relates to the RF&P, a physical description of the bridge, copies of the measured drawings and large-format photographs, and any additional data gathered during this process. The draft shall be submitted concurrently to the FRA, Virginia SHPO, and Consulting Parties for review and comment, as appropriate. The DRPT shall submit final documents to FRA, the Virginia SHPO, the Library of Virginia, the Virginia Historical Society, the Fairfax County Historical Society, the Prince William Historic Society, and to other Consulting Parties upon request.

C. Rippon Lodge (DHR Inventory No. 076-0023)

   1. The adverse effect on Rippon Lodge is caused by the installation of a new railroad bridge across Neabsco Creek. As such, draft designs for the new Neabsco Creek bridge shall be compatible with the architectural and historic character of the existing structure and nearby historic properties. The DRPT shall submit draft design plans for the new bridge at the schematic, 30%, 65%, and 90% stages concurrently to the FRA, Virginia SHPO, property owner, and Consulting Parties for review and comment. The design packet shall include a set of bridge plans and elevations, as well as a schematic showing the proposed

bridge design in relation to the existing Neabsco Creek bridge to show proposed visual modifications.

2. Prior to beginning construction and within one (1) year of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), the DRPT shall sponsor a cultural landscape study of the Neabsco Creek watershed between Rippon Lodge and the Neabsco Creek bridge. The study shall follow the Secretary of the Interior's Standards for conducting historic landscape studies as well as applicable guidance found in NPS Bulletin #18, *How to Evaluate and Nominate Designed Historic Landscapes* and other appropriate publications and guidance documents. The landscape study shall include, at a minimum, completing archival research on this segment of Neabsco Creek focusing on historic images and maps of this corridor and gathering spatial data on the current parameters of the waterway in this area. The data shall be used to create a contextual narrative on the evolution of the waterway over time inclusive of GIS overlays and photodocumentation. The ensuing cultural landscape report shall be submitted concurrently to the FRA, Virginia SHPO, Prince William County, and Consulting Parties for review and comment, as appropriate. The DRPT shall disseminate final copies to the FRA, Virginia SHPO, and Prince William County Planning Office for their collections, and to other Consulting Parties upon request.

3. Upon completion of the cultural landscape study, the DRPT shall fund the fabrication and installation of an interpretive sign near the Rippon Lodge/Neabsco Creek vista as part of Prince William County's signage initiative program to disseminate information about the historical viewshed to the general public. In consultation with the FRA, Virginia SHPO, Prince William County, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text and layout for the signage. The draft text and layout shall be submitted to the FRA, Virginia SHPO, Prince William County, and other Consulting Parties for review and comment. If the signage text and layout are acceptable to the FRA, Virginia SHPO, Prince William County, and other Consulting Parties, the DRPT shall produce the signage panel and install the panel in a location deemed suitable by the FRA, Virginia SHPO, Prince William County, and other Consulting Parties. Prince William County is under no obligation to approve the signage. If the Prince William County Planning Department does not approve the signage to be a part of their marker and signage program, the DRPT shall consult with the FRA, Virginia SHPO and other Consulting Parties to determine an appropriate method to interpret the historic viewshed to the public.

4. Upon completion of the cultural landscape study, the DRPT shall assist in the restoration of the viewshed between Rippon Lodge and the Neabsco Creek rail bridge through the removal of underbrush as depicted in Appendix D. Mature trees will be left extant. Plans associated with the vegetative removal will be discussed with the FRA, Virginia SHPO, Prince William County, and other Consulting Parties, as appropriate, and implemented. Prince William County is

under no obligation to approve the vegetative clearing. If the Prince William County Planning Department does not approve the vegetative clearing, the DRPT shall consult with the FRA, Virginia SHPO and other Consulting Parties to determine an appropriate method to restore the historic viewshed.

D. Site 44ST1223- Civil War Campsite

1. The DRPT shall avoid Site 44ST1223 to the greatest extent possible. For the portions of the archaeological site that cannot be avoided, prior to ground disturbing activities and within two (2) years of receipt of Project construction funding in this segment as described under Stipulation V(C), the DRPT shall conduct an intensive pedestrian survey with mapping of all visible surface features and GIS map overlays followed by Phase III archaeological data recovery in areas with the potential for intact subsurface remains. The archaeological work shall include the following components:

    a. DRPT shall develop a draft data recovery plan for the investigations and submit the plan concurrently to the FRA, Virginia SHPO, property owner, NPS-Fredericksburg, ABPP, CWT and Consulting Parties for review and comment, as appropriate. The plan shall be consistent with the Secretary of the Interior's *Standards and Guidelines for Archaeological Documentation* (48 Fed. Reg. 44734–37, September 29, 1983) and take into account the ACHP's publication, *Treatment of Archaeological Properties* (1980). The plan shall include:

        1) The property, properties, or portions of properties where site-specific data recovery plans shall be carried out;

        2) Any property, properties, or portions of properties that will be destroyed or altered without data recovery;

        3) The research questions to be addressed through data recovery, with an explanation of their relevance and importance;

        4) The methods to be used with an explanation of their relevance to the research questions;

        5) The methods to be used in analysis, data management, and dissemination of data, including a schedule;

        6) The proposed disposition of recovered materials and records;

        7) Proposed methods of disseminating the results of the work to interested individuals and/or organizations who have expressed an interest in the data recovery; and

        8) A schedule for the submission of progress reports to the Virginia SHPO.

b. Upon revision of the plan and acceptance of a data recovery plan by the FRA and Virginia SHPO, the DRPT shall complete or cause to be completed all pedestrian survey, mapping, GIS overlays, and archaeological excavation described in the recovery plan. The report will meet all state standards for data recovery reports and include required components. DRPT shall submit draft copies of the ensuing report concurrently to the FRA, Virginia SHPO, property owner, NPS- Fredericksburg, ABPP, CWT, and Consulting Parties for review and comment. Final copies of the report shall be disseminated to the FRA, Virginia SHPO, property owner, NPS- Fredericksburg, ABPP, CWT, and Library of Virginia for their collections, and to other Consulting Parties upon request. A final VCRIS form and associated packet will be given to the DHR at this time for their archives.

2. Using the information gathered during the mapping and data recovery, within four (4) years of the receipt of Project construction funding in this segment as described under Stipulation V(C), the DRPT shall produce, or cause to be produced, a scholarly article discussing the historical and archaeological importance of this site. The FRA, DRPT, Virginia SHPO, NPS-Fredericksburg, and the other Consulting Parties shall discuss the location for submittal for publication, and the final publication submittal location shall be determined based on consensus of involved parties. The DRPT shall submit the article to the agreed upon publication and shall have no other obligations with respect to any actions that may be taken by the publisher once the article is submitted and accepted or declined, except that DRPT shall undertake any revisions or provide other assistance requested by the publisher if the article is accepted for publication.

3. Upon completion of the archaeological report, the DRPT shall fund the fabrication and installation of an interpretive sign in a location deemed appropriate by the Fredericksburg & Spotsylvania National Military Park as part of their signage initiative program to disseminate information about Civil War camps to the general public. In consultation with the FRA, Virginia SHPO, Fredericksburg & Spotsylvania National Military Park, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text and layout for the signage. The draft text and layout shall be submitted to the FRA, Virginia SHPO, Fredericksburg & Spotsylvania National Military Park, and other Consulting Parties for review and comment. If the signage text and layout are acceptable to the FRA, Virginia SHPO, Fredericksburg & Spotsylvania National Military Park, and other Consulting Parties, the DRPT shall produce the signage panel and install the panel in the selected location. Fredericksburg & Spotsylvania National Military Park is under no obligation to approve the signage. If the Fredericksburg & Spotsylvania National Military Park does not approve the signage to be a part of their marker and signage program, the DRPT shall consult with the FRA, Virginia SHPO and other Consulting Parties to determine an appropriate method to interpret the historic site to the public.

E. Rappahannock River Railroad Bridge and Structures/Platform (DHR Inventory No. 111-0132-0025)

1. Draft designs for the new Rappahannock River bridge, associated structures in downtown Fredericksburg, and new platform shall be compatible with the architectural and historic character of the existing structure and nearby historic properties. The DRPT shall submit draft design plans for the new bridge at the schematic, 30%, 65%, and 90% stages concurrently to the FRA, Virginia SHPO, property owner, and Consulting Parties for review and comment. The design packet shall include a set of bridge plans and elevations, as well as a schematic showing the proposed bridge design in relation to the existing Rappahannock River Railroad Bridge and Structures/Platform to show proposed visual modifications.

2. Within one (1) year of the receipt of funding for Project construction in this segment as described under Stipulation V(C), the DRPT shall produce, or cause to be produced, measured drawings of the existing bridge, structures and platform prior to any alterations. The drawings shall conform to the guidelines specified by the NPS as set forth in Historic American Buildings Survey/Historic American Engineering Record (HABS/HAER) Guidelines (http://www.cr.nps.gov/hdp/standards/haerguidelines.htm).

3. Concurrent with the measured drawings, DRPT shall engage a professional photographer with experience in preparing large-format, black-and-white, archival-quality photographic documentation for HAER and HAER-type documentation projects to complete large-format photographs of the existing Rappahannock River Railroad Bridge and Structures/Platform. Photographs shall comply with HABS/HAER Photographs Specifications and Guidelines (http://www.cr.nps.gov/hdp/standards/HABS/photospecs.pdf) and DHR's "Photographic Documentation for Virginia Department of Historic Resources Survey (Updated 016). Negatives and print sizes shall be 4" x 5". Negatives and prints shall be processed, labeled, and packaged according to HABS/HAER archival standards. A list of photo captions (index to photos) and a site plan of the bridge showing the location and direction of the photographs (key to photos) shall be included.

   Photographic views shall show the bridge and associated railway, structures within downtown Fredericksburg, and extant platform, as well as the surrounding landscape. Overview and detail photos of the bridge and other elements shall be provided, documenting as much as possible of the engineering and construction methods for the property including exterior elevations and detailed views of significant architectural or historical features.

4. Prior to beginning construction and within four (4) years of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), the DRPT shall sponsor a cultural landscape study of the Rappahannock River

watershed and historic transportation crossings within the City of Fredericksburg, bounded by the Blue/Grey Parkway bridge on the south and Hawke Street on the north. The study shall follow the Secretary of the Interior's Standards for conducting historic landscape studies as well as applicable guidance found in NPS Bulletin #18, *How to Evaluate and Nominate Designed Historic Landscapes* and other appropriate publications and guidance documents. The landscape study shall include, at a minimum, completing archival research on this segment of the Rappahannock River focusing on historic images and maps of this corridor, recording historic transportation crossings in this area including bridges and ferries, and gathering spatial data on the current parameters of the waterway in this area. In addition, the work shall document the extant railroad bridge crossing as an iconic vista in various cultural media in the twentieth century. The data shall be used to create a contextual narrative on the evolution of the waterway over time inclusive of GIS overlays and photodocumentation. The ensuing cultural landscape report shall be submitted concurrently to the FRA, Virginia SHPO, City of Fredericksburg, HFFI, and Consulting Parties for review and comment, as appropriate. The DRPT shall disseminate final copies to the FRA, Virginia SHPO, City of Fredericksburg, Central Rappahannock Regional Library, and HFFI for their collections, and to other Consulting Parties upon request.

F. Site 44SP0187- Bridge/Marye's Mill, Site 44SP0688- Block 49/Train Station, and Site 44SP0687- Block 48/Train Station

1. These three sites are all located within three adjacent blocks in downtown Fredericksburg. The DRPT shall avoid, to the greatest extent possible, all three sites (44SP0187, 44SP0688, and 44SP0687). For the portions of the archaeological sites that cannot be avoided and where appropriate, prior to ground disturbing activities and within two (2) years of receipt of Project construction funding in this segment as described under Stipulation V(C), the DRPT shall conduct an intensive pedestrian survey with mapping of all visible surface features and GIS map overlays at each site (as appropriate) followed by Phase III archaeological data recovery in areas with the potential for intact subsurface remains. The archaeological work at all three sites shall include the following components:

   a. DRPT shall develop a separate draft data recovery plan per site for the investigations and submit the plan concurrently to the FRA, Virginia SHPO, City of Fredericksburg, and Consulting Parties for review and comment, as appropriate. The plan shall be consistent with the Secretary of the Interior's *Standards and Guidelines for Archaeological Documentation* (48 Fed. Reg. 44734–37, September 29, 1983) and take into account the ACHP's publication, *Treatment of Archaeological Properties* (1980). Each plan shall include:

        1) The property, properties, or portions of properties where site-specific data recovery plans shall be carried out;

        2) Any property, properties, or portions of properties that will be destroyed or altered without data recovery;

        3) The research questions to be addressed through data recovery, with an explanation of their relevance and importance;

        4) The methods to be used with an explanation of their relevance to the research questions;

        5) The methods to be used in analysis, data management, and dissemination of data, including a schedule;

        6) The proposed disposition of recovered materials and records;

        7) Proposed methods of disseminating the results of the work to interested individuals and/or organizations who have expressed an interest in the data recovery; and

        8) A schedule for the submission of progress reports to the Virginia SHPO.

    b. Upon revision of the plan and acceptance of the three data recovery plans by the FRA and Virginia SHPO, the DRPT shall complete or cause to be completed all pedestrian survey, mapping, GIS overlays, and archaeological excavation described in the recovery plan at each site. Depending on the approved data recovery plan, one report containing data on all three excavations may be produced, or three separate documents may be completed. In either case, the report(s) will meet all state standards for data recovery reports and include required components. DRTP shall submit draft copies of the ensuing report concurrently to the FRA, Virginia SHPO, City of Fredericksburg, and Consulting Parties for review and comment. Final copies of the report shall be disseminated to the FRA, Virginia SHPO, City of Fredericksburg, Central Rappahannock Regional Library, and Library of Virginia for their collections, and to other Consulting Parties upon request. Final VCRIS forms and associated packets will be given to the DHR at this time for their archives.

2. Using the information gathered during the mapping and data recovery, within four (4) years of the receipt of Project construction funding in this segment as described under Stipulation V(C), the DRPT shall produce, or cause to be produced, a cohesive scholarly article discussing the historical and archaeological importance of these three sites. The FRA, DRPT, Virginia SHPO, City of Fredericksburg, and the other Consulting Parties shall discuss the location for submittal for publication, and the final publication submittal location shall be determined based on consensus of involved parties. The DRPT shall submit the article to the agreed upon location and shall have no other

obligations with respect to any actions that may be taken by the publisher once the article is submitted and accepted or declined, except that DRPT shall undertake any revisions or provide other assistance requested by the publisher if the article is accepted for publication.

3. Within three (3) years of receipt of funding for Project construction in this segment, as described under Stipulation V(C), the DRPT shall provide, or cause to be provided, a lecture for the general public on the results of the archaeological studies on these three sites, preferably to be presented in the City of Fredericksburg. This lecture shall be advertised in the Fredericksburg area and the surrounding region.

4. As part of the design of the new passenger facility in Fredericksburg associated with this project, the DRPT shall fund the fabrication and installation of an interpretive sign near the passenger facility as part of the City of Fredericksburg's signage initiative program to disseminate information to the general public about the history of this area and the archaeological studies completed at Sites 44SP0187, 44SP0688, and 44SP0687. In consultation with the FRA, Virginia SHPO, the City of Fredericksburg, HFFI, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text and layout for the signage. The draft text and layout shall be submitted to the FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties for review and comment. If the signage text and layout are acceptable to the FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties, the DRPT shall produce the signage panel and install the panel in a location deemed suitable by the FRA, Virginia SHPO, City of Fredericksburg, HFFI, other Consulting Parties, and the property owner, as applicable. The City of Fredericksburg is under no obligation to approve the signage. If the City of Fredericksburg does not approve the signage to be a part of their marker and signage program, the DRPT shall consult with the FRA, Virginia SHPO, HFFI, and other Consulting Parties to determine an appropriate method to interpret the historic properties to the public.

5. As part of the design of the new passenger facility in Fredericksburg associated with this project, the DRPT shall fund the fabrication and installation of a museum exhibit within the passenger facility to disseminate information to the general public about the history of this area and the archaeological studies completed at Sites 44SP0187, 44SP0688, and 44SP0687. In consultation with the FRA, Virginia SHPO, the City of Fredericksburg, HFFI, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text and layout for the exhibit. The draft text and layout shall be submitted to the FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties for review and comment. If the text and layout are acceptable to the FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties, the DRPT shall produce and install the exhibit within the station.

G. Fredericksburg Historic District (DHR Inventory No. 111-0132)

1. Draft designs for the new parking deck in downtown Fredericksburg shall be compatible with the architectural and historic character of the surrounding historic district. The DRPT shall submit draft design plans for the new structure at the schematic, 30%, 65%, and 90% stages concurrently to the FRA, Virginia SHPO, City of Fredericksburg, Fredericksburg Architectural Review Board, HFFI, and Consulting Parties for review and comment. The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed structure design in relation to the surrounding historic district to show proposed visual modifications.

2. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation V(C), the DRPT shall create, or cause to be created, a historic context on the evolution of the rail system in downtown Fredericksburg. This includes acquiring archival data on the establishment of and modifications to the rail line between the Rappahannock River and Hazel Run. The data obtained during the research shall be compiled into a report. The DRPT shall submit a draft report concurrently to the FRA, Virginia SHPO, City of Fredericksburg, HFFI, and Consulting Parties for review and comment. The DRPT shall disseminate the final report to the FRA, Virginia SHPO, City of Fredericksburg, HFFI, Central Rappahannock Regional Library, and Library of Virginia, and to other Consulting Parties and public libraries and historical societies for their collections, upon request.

3. Within three (3) years of receipt of funding for Project construction in this segment, as described under Stipulation V(C), the DRPT shall provide, or cause to be provided, a lecture for the general public on the results of the contextual study on the evolution of the railroad in Fredericksburg, preferably to be presented in the city. This lecture shall be advertised in the Fredericksburg area and the surrounding region.

4. Concurrent with the public presentation, the DRPT shall create, or cause to be created, an abbreviated narrative on the history of the railroad in Fredericksburg, as well as details of the Project, and post the document on the Local History page of the Central Rappahannock Regional Library's webpage (http://www.librarypoint.org/history/). The data can be uploaded as a stand-alone webpage or as a downloadable .pdf. The data will remain on their webpage for a minimum of two (2) years. The DRPT shall submit a draft of the webpage content concurrently to the FRA, Virginia SHPO, City of Fredericksburg, HFFI, Central Rappahannock Regional Library, and Consulting Parties for review and comment. The DRPT shall disseminate the final webpage to the Central Rappahannock Regional Library for their placement on the webpage. The Central Rappahannock Regional Library is under no obligation to approve the webpage. If the Central Rappahannock Regional Library does not approve the webpage content to be a part of their digital programming, the DRPT shall

consult with the FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties to determine an appropriate method to disseminate this data to the public.

H. Site 44SP0468- Earthwork/ Jackson's Earthwork

1. The DRPT will, to the extent possible, avoid Site 44SP0468. For the portions of the archaeological site that cannot be avoided, the DRPT shall conduct an intensive pedestrian survey with mapping of all visible surface features and GIS map overlays followed by Phase III archaeological data recovery in areas with the potential for intact subsurface remains prior to ground disturbing activities and within two (2) years of receipt of Project construction funding in this segment as described under Stipulation V(C). The archaeological work shall include the following components:

    a. DRPT shall develop a draft data recovery plan for the investigations and submit the plan concurrently to the FRA, Virginia SHPO, property owner, NPS-Fredericksburg, ABPP, CWT, and Consulting Parties for review and comment, as appropriate. The plan shall be consistent with the Secretary of the Interior's *Standards and Guidelines for Archaeological Documentation* (48 Fed. Reg. 44734–37, September 29, 1983) and take into account the ACHP's publication, *Treatment of Archaeological Properties* (1980). The plan shall include:

        1) The property, properties, or portions of properties where site-specific data recovery plans shall be carried out;

        2) Any property, properties, or portions of properties that will be destroyed or altered without data recovery;

        3) The research questions to be addressed through data recovery, with an explanation of their relevance and importance;

        4) The methods to be used with an explanation of their relevance to the research questions;

        5) The methods to be used in analysis, data management, and dissemination of data, including a schedule;

        6) The proposed disposition of recovered materials and records;

        7) Proposed methods of disseminating the results of the work to interested individuals and/or organizations who have expressed an interest in the data recovery; and

        8) A schedule for the submission of progress reports to the Virginia SHPO.

b. Upon revision of the plan and acceptance of a data recovery plan by the FRA and Virginia SHPO, the DRPT shall complete or cause to be completed all pedestrian survey, mapping, GIS overlays, and archaeological excavation described in the recovery plan. The report will meet all state standards for data recovery reports and include required components. DRPT shall submit draft copies of the ensuing report concurrently to the FRA, Virginia SHPO, property owner, NPS- Fredericksburg, ABPP, CWT, and Consulting Parties for review and comment. Final copies of the report shall be disseminated to the FRA, Virginia SHPO, property owner, NPS- Fredericksburg, ABPP, CWT, and Library of Virginia for their collections, and to other Consulting Parties upon request. DRPT will give to DHR a final VCRIS form and associated packet for DHR's archives.

2. Using the information gathered during the mapping and data recovery, within four (4) years of the receipt of Project construction funding in this segment as described under Stipulation V(C), the DRPT shall produce, or cause to be produced, a scholarly article discussing the historical and archaeological importance of this site. The FRA, DRPT, Virginia SHPO, NPS-Fredericksburg, ABPP, CWT, and the other Consulting Parties shall discuss the location for submittal for publication, and the final publication submittal location shall be determined based on consensus of involved parties. The DRPT shall submit the article to the agreed upon location and shall have no other obligations with respect to any actions that may be taken by the publisher once the article is submitted and accepted or declined, except that DRPT shall undertake any revisions or provide other assistance requested by the publisher if the article is accepted for publication.

3. Upon completion of the archaeological report, the DRPT shall fund the fabrication and installation of an interpretive sign in a location deemed appropriate by the Fredericksburg & Spotsylvania National Military Park as part of their signage initiative program to disseminate information about Civil War camps to the general public. In consultation with the FRA, Virginia SHPO, Fredericksburg & Spotsylvania National Military Park, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text and layout for the signage. The draft text and layout shall be submitted to the FRA, Virginia SHPO, Fredericksburg & Spotsylvania National Military Park, and other Consulting Parties for review and comment. If the signage text and layout are acceptable to the FRA, Virginia SHPO, Fredericksburg & Spotsylvania National Military Park, and other Consulting Parties, the DRPT shall produce the signage panel and install the panel in the selected location. Fredericksburg & Spotsylvania National Military Park is under no obligation to approve the signage. If the Fredericksburg & Spotsylvania National Military Park does not approve the signage to be a part of their marker and signage program, the DRPT shall consult with the FRA, Virginia SHPO and other Consulting Parties to determine an appropriate method to interpret the historic site to the public.

I. Doswell Historic District (DHR Inventory No. 042-5448)

1. Within two (2) years of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), the DRPT shall complete, or cause to be completed, a NRHP nomination form for the historic district. The DRPT shall submit the draft nomination form concurrently to the FRA, Virginia SHPO, Hanover County, and Consulting Parties for review and comment, as appropriate. The DRPT shall submit the final draft of the NRHP nomination to the FRA and Virginia SHPO for listing to the NRHP as prescribed by the agency's established procedures for the Register program. The DRPT shall have no other obligations with respect to any actions that may be taken by Hanover County, the property owners, the Virginia SHPO, or any other entity relating to the nomination of the property to the NRHP. The DHR State Review Board is under no obligation to approve the nomination for listing to the NRHP.

2. Concurrent with the NRHP nomination, the DRPT shall fund the fabrication and installation of a Virginia state historical highway marker, in accordance with Va. Code Ann. §§ 10.1–2202, 10.1–2204, and 10.1–2209, which govern the State Historical Highway Markers program, to be located within the Doswell Historic District to disseminate information about the history of Doswell to the general public. The historical highway marker shall summarize the historical significance of the Town of Doswell and the related railroad history in this area. In consultation with the FRA, Virginia SHPO, Hanover County, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text for the state historical highway marker. The DRPT shall submit the draft text for the state historical highway marker to the Virginia SHPO historical highway marker program for review and approval, and Hanover County and other Consulting Parties for review and comment. The Virginia SHPO shall then perform its respective role, as prescribed by the agency's established procedures for the Virginia state historical highway marker program.

   The Virginia Board of Historic Resources is under no obligation, and nothing in this MOA should be construed to require the Virginia Board of Historic Resources, to approve the state historical highway marker. If the Virginia Board of Historic Resources approves the state historical highway marker, the DRPT shall request that the Virginia Department of Transportation (VDOT) install the state historical highway marker within six (6) months after its approval. The VDOT is under no obligation to accept this request. If the Virginia Board of Historic Resources does not approve the state historical highway marker, the DRPT shall consult with the FRA, Virginia SHPO, Hanover County, and the other Consulting Parties to determine an appropriate method to interpret the Doswell Historic District to the public.

3. Concurrent with the marker, the DRPT shall create, or cause to be created, an abbreviated narrative on the history of Doswell and post the document on the Hanover's Historic Places page of the Hanover County Historical Society's

webpage (http://www.hchs.us/places.html/). The data can be uploaded as a stand-alone webpage or as a downloadable .pdf. The data will remain on their webpage for a minimum of two (2) years. The DRPT shall submit a draft of the webpage content concurrently to the FRA, Virginia SHPO, Hanover County, Hanover County Historical Society, and Consulting Parties for review and comment. The DRPT shall disseminate the final webpage to the Hanover County Historical Society for their placement on the webpage. The Hanover County Historical Society is under no obligation to approve the webpage. If the Hanover County Historical Society does not approve the webpage content to be a part of their digital programming, the DRPT shall consult with the FRA, Virginia SHPO, Hanover County, and other Consulting Parties to determine an appropriate method to disseminate this data to the public.

J. Doswell Depot and Tower (DHR Inventory No. 042-0093)

1. Within one (1) year of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), the DRPT shall produce, or cause to be produced, measured drawings of the existing depot and tower prior to any alterations. The drawings shall conform to the guidelines specified by the NPS as set forth in Historic American Buildings Survey/Historic American Engineering Record (HABS/HAER) Guidelines (http://www.cr.nps.gov/hdp/standards/haerguidelines.htm).

2. Concurrent with the measured drawings, DRPT shall engage a professional photographer with experience in preparing large-format, black-and-white, archival-quality photographic documentation for HAER and HAER-type documentation projects to complete large-format photographs of the existing depot and tower. Photographs shall comply with HABS/HAER Photographs Specifications and Guidelines (http://www.cr.nps.gov/hdp/standards/HABS/photospecs.pdf) and DHR's "Photographic Documentation for Virginia Department of Historic Resources Survey (Updated 016). Negatives and print sizes shall be 4" x 5". Negatives and prints shall be processed, labeled, and packaged according to HABS/HAER archival standards. A list of photo captions (index to photos) and a site plan of the building showing the location and direction of the photographs (key to photos) shall be included.

   Photographic views shall show both the depot and the tower, as well as the surrounding landscape. Overview and detail photos of the depot, tower, and other elements shall be provided, documenting as much as possible of the engineering and construction methods for the property including exterior elevations and detailed views of significant architectural or historical features.

3. Prior to construction of the undertaking in this area, the DRPT shall employ a qualified structural engineer with demonstrated experience working with historic properties to carefully move the tower. The tower shall be installed outside of the Project limits of disturbance using the Secretary of the Interior's

Standards for Reconstruction and NPS Preservation Briefs, Technical Notes, and other relevant guidance and accepted historic preservation practices, as appropriate. DRPT shall coordinate the final location of the tower with the FRA, Virginia SHPO, Hanover County, and property owners prior to moving the historic building.

4. Within two (2) years of the receipt of funding for Project construction in this segment, the DRPT shall fund the fabrication and installation of an interpretive sign near either the depot or the moved tower as part of Hanover County's signage initiative program to disseminate information about the historic of the railroad in this area, the Project, and the process to move the tower to the general public. In consultation with the FRA, Virginia SHPO, Hanover County, the property owners, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text and layout for the signage. The draft text and layout shall be submitted to the FRA, Virginia SHPO, Hanover County, the property owners, and other Consulting Parties for review and comment. If the signage text and layout are acceptable to the FRA, Virginia SHPO, Hanover County, property owners, and other Consulting Parties, the DRPT shall produce the signage panel and install the panel in a location deemed suitable by the FRA, Virginia SHPO, Hanover County, other Consulting Parties, and the property owner, as applicable. Hanover County and the property owners are under no obligation to approve the signage. If Hanover County and the property owners do not approve the signage to be a part of their marker and signage program and to be placed on their parcel, the DRPT shall consult with the FRA, Virginia SHPO, Hanover County, and other Consulting Parties to determine an appropriate method to interpret the historic properties to the public.

K. Berkleytown Historic District (DHR Inventory No. 166-5073)

1. Draft designs for the new structural overpass of Archie Cannon Road shall be compatible with the architectural and historic character of the adjacent historic district. The DRPT shall submit draft design plans for the new structure at the schematic, 30%, 65%, and 90% stages concurrently to the FRA, Virginia SHPO, Town of Ashland, Ashland Museum, and Consulting Parties for review and comment. The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed structure design in relation to the adjacent historic district to show proposed visual modifications.

2. Within one (1) year of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), the DRPT shall complete, or cause to be completed, two oral histories of individuals with an extended tenure living and/or working within the Berkleytown Historic District and are knowledgeable of the history and evolution of the area, if such individuals are available. Interviews shall be taped, and transcriptions of the interviews shall be submitted to the FRA, Virginia SHPO, Town of Ashland, Ashland Museum, and

the Library of Virginia for their collections, and other Consulting Parties upon request.

3. Within two (2) years of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), the DRPT shall complete, or cause to be completed, a NRHP nomination form for the historic district. The DRPT shall submit the draft nomination form concurrently to the FRA, Virginia SHPO, Town of Ashland, Ashland Museum, and Consulting Parties for review and comment, as appropriate. The DRPT shall submit the final draft of the NRHP nomination to the FRA and Virginia SHPO for listing to the NRHP as prescribed by the agency's established procedures for the Register program. The DRPT shall have no other obligations with respect to any actions that may be taken by the Town of Ashland, the property owners, the Virginia SHPO, or any other entity relating to the nomination of the property to the NRHP. The DHR State Review Board is under no obligation to approve the nomination for listing to the NRHP.

4. Concurrent with the NRHP nomination, the DRPT shall fund the fabrication and installation of a Virginia state historical highway marker, in accordance with Va. Code Ann. §§ 10.1–2202, 10.1–2204, and 10.1–2209, which govern the State Historical Highway Markers program, to be located within the Berkleytown Historic District to disseminate information about the history of Berkleytown to the general public. The historical highway marker shall summarize the historical significance of the community. In consultation with the FRA, Virginia SHPO, Town of Ashland, Ashland Museum, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text for the state historical highway marker. The DRPT shall submit the draft text for the state historical highway marker to the Virginia SHPO historical highway marker program for review and approval, and the Town of Ashland, Ashland Museum, and other Consulting Parties for review and comment. The Virginia SHPO shall then perform its respective role, as prescribed by the agency's established procedures for the Virginia state historical highway marker program.

   The Virginia Board of Historic Resources is under no obligation, and nothing in this MOA should be construed to require the Virginia Board of Historic Resources, to approve the state historical highway marker. If the Virginia Board of Historic Resources approves the state historical highway marker, the DRPT shall request that VDOT install the state historical highway marker within six (6) months after its approval. The VDOT is under no obligation to accept this request. If the Virginia Board of Historic Resources does not approve the state historical highway marker, the DRPT shall consult with the FRA, Virginia SHPO, the Town of Ashland, Ashland Museum, and the other Consulting Parties to determine an appropriate method to interpret the Berkleytown Historic District to the public.

5. Concurrent with the NRHP nomination, the DRPT shall complete, or cause to be completed, narrative text associated with a walking tour of the historic district. Text is to be completed in partnership with the Ashland Museum. The DRPT shall submit the draft walking tour text concurrently to the FRA, Virginia SHPO, Town of Ashland, Ashland Museum, and Consulting Parties for review and comment, as appropriate. The DRPT shall submit the final draft of the walking tour text to the FRA and Virginia SHPO. The DRPT shall have no other obligations with respect to any actions that may be taken by the Town of Ashland, the Ashland Museum, the property owners, the Virginia SHPO, or any other entity relating to the walking tour.

L. Laurel Industrial School Historic District (DHR Inventory No. 043-0292) and Main Building/Robert Stiles Building (DHR Inventory No. 043-0292-0001)

1. Draft designs for the new structural overpass of Hungary Road shall be compatible with the architectural and historic character of the adjacent historic district and nearby historic properties. The DRPT shall submit draft design plans for the new structure at the schematic, 30%, 65%, and 90% stages concurrently to the FRA, Virginia SHPO, Henrico County, and Consulting Parties for review and comment. The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed structure design in relation to the adjacent historic district and nearby historic properties to show proposed visual modifications.

2. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation V(C), the DRPT shall create, or cause to be created, a historic context on late-nineteenth/early-twentieth century reform schools in Central Virginia. This includes acquiring archival data on the Laurel Industrial School Historic District and other similar institutions in central Virginia, completing an abbreviated architectural study of nearby, extant facilities that functioned in a similar capacity, and briefly identifying comparable facilities in other parts of the state for contextual analysis. The data obtained during the research shall be compiled into a report. The DRPT shall submit a draft report concurrently to the FRA, Virginia SHPO, Henrico County, and Consulting Parties for review and comment. The DRPT shall disseminate the final report to the FRA, Virginia SHPO, Henrico County, and Library of Virginia, and to other Consulting Parties and public libraries and historical societies for their collections, upon request. If appropriate, final VCRIS form and associated packet will be given to the DHR at this time for their archives related to any facilities documented as part of this research that are not currently in their records.

3. As part of the contextual research completed above, the DRPT shall create, or cause to be created, a historic map and aerial study of the Laurel Industrial School Historic District and surrounding area. A series of georeferenced, GIS-based overlays will be created to illustrate the evolution of the landscape and

road system in this area. The resulting documents will include a series of illustrations and an accompanying narrative describing the history of the road system and landscape near the intersection of Hungary Road and the railroad. The DRPT shall submit a draft report concurrently to the FRA, Virginia SHPO, Henrico County, and Consulting Parties for review and comment. The DRPT shall disseminate the final report and associated digital data to the FRA, Virginia SHPO, Henrico County, and Library of Virginia, and to other Consulting Parties and public libraries and historical societies for their collections, upon request.

4. Within four (4) years of the receipt of funding for Project construction in this segment, the DRPT shall fund the fabrication and installation of an interpretive sign near the Main Building/Robert Stiles Building as part of Hanover County's signage initiative program to disseminate information about the historic of the surrounding historic district, the Main Building/Robert Stiles Building, and association of this area with the railroad to the general public. In consultation with the FRA, Virginia SHPO, Henrico County, the property owner, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text and layout for the signage. The draft text and layout shall be submitted to the FRA, Virginia SHPO, Henrico County, the property owner, and other Consulting Parties for review and comment. If the signage text and layout are acceptable to the FRA, Virginia SHPO, Henrico County, the property owner, and other Consulting Parties, the DRPT shall produce the signage panel and install the panel in a location deemed suitable by the FRA, Virginia SHPO, Henrico County, property owner, and other Consulting Parties, as applicable. Henrico County and the property owner are under no obligation to approve the signage. If Henrico County and the property owners do not approve the signage to be a part of their marker and signage program and to be placed on their parcel, the DRPT shall consult with the FRA, Virginia SHPO, Henrico County, and other Consulting Parties to determine an appropriate method to interpret the historic properties to the public.

M. Shockoe Valley & Tobacco Row Historic District (DHR Inventory No. 127-0344)

1. Draft designs for the new parking deck in Shockoe Bottom shall be compatible with the architectural and historic character of the surrounding historic district. The DRPT shall submit draft design plans for the new structure at the schematic, 30%, 65%, and 90% stages concurrently to the FRA, Virginia SHPO, City of Richmond, Richmond Commission of Architectural Review, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment. The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed structure design in relation to the surrounding historic district and nearby historic properties to show proposed visual modifications.

2. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation V(C), the DRPT shall create, or cause to be created,

a historic context on the association of the RF&P railroad and the slave trade in Virginia. This includes acquiring archival data on the establishment and proliferation of the slave trade in Shockoe Bottom and associated activities between Richmond and Washington, D.C along the RF&P line, as well as gathering reconnaissance-level data on any extant buildings or known archaeological sites along the rail corridor between Washington, D.C. and Richmond that have an association with the slave trade. The task will also include community engagement and ethnographic research regarding current significance of slave trade and surrounding district to descendent community. The data obtained during all phases of research shall be compiled into a report and georeferenced on modern aerial maps to create a series of GIS-based overlays. The DRPT shall submit a draft report concurrently to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment. The DRPT shall disseminate the final report to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and Library of Virginia, and to other Consulting Parties and public libraries and historical societies for their collections, upon request. The digital data obtained as part of this process will also be disseminated to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, Library of Virginia, and other groups who have an interest in this topic, provided that the dissemination meets the requirements set forth in the Archeological Resources Protection Act.

3. Within four (4) years of receipt of funding for Project construction in this segment, as described under Stipulation V(C), the DRPT shall provide, or cause to be provided, a lecture for the general public on the results of the contextual study on the association of the RF&P railroad and the slave trade, preferably to be presented in Richmond. This lecture shall be advertised in Richmond, Fredericksburg, Alexandria, and other areas highlighted in the research.

4. Concurrent with the preparation of the context, the DRPT shall fund the fabrication and installation of a Virginia state historical highway marker, in accordance with Va. Code Ann. §§ 10.1–2202, 10.1–2204, and 10.1–2209, which govern the State Historical Highway Markers program, to be located near the site of Lumpkin's Jail/Devil's Half Acre to disseminate information about the site, the nearby Burial Ground for Negros (site 44HE1089), and the associated slave trade in this area to the general public. In consultation with the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text for the state historical highway marker. The DRPT shall submit the draft text for the state historical highway marker to the Virginia SHPO historical highway marker program for review and approval, and the City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties for review and comment. The Virginia SHPO shall then perform its respective role, as

prescribed by the agency's established procedures for the Virginia state historical highway marker program.

The Virginia Board of Historic Resources is under no obligation, and nothing in this MOA should be construed to require the Virginia Board of Historic Resources, to approve the state historical highway marker. If the Virginia Board of Historic Resources approves the state historical highway marker, the DRPT shall request that VDOT install the state historical highway marker within six (6) months after its approval. The VDOT is under no obligation to accept this request. If the Virginia Board of Historic Resources does not approve the state historical highway marker, the DRPT shall consult with the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and the other Consulting Parties to determine an appropriate method to interpret the slave trade and associated sites of significance in this area to the public.

5. Concurrent with the context preparation, the DRPT shall work with the City of Richmond to establish boundaries for a potential historic district that encompasses resources associated with the slave trade in Shockoe Bottom. The geographic data will be added to the ongoing historic district research completed by the Virginia SHPO and City of Richmond and others on file at the Virginia SHPO office. The DRPT shall submit a draft boundary and any other pertinent data concurrently to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment. The DRPT shall disseminate the final boundary and other pertinent data to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, upon request. The digital data obtained as part of this process will also be used to update the Virginia SHPO online site database provided that the dissemination meets the requirements set forth in the Archeological Resources Protection Act.

N. Site 44HE1098- Main Street Station Parking Lot/Railroad, Site 44HE1097-Railroad, Warehouse, and Site 44HE1094-Warehouse

1. These three sites are all located within two adjacent blocks in Shockoe Bottom. The DRPT shall avoid all three sites (44HE1098, 44HE1097, and 44HE1094) where possible. For the portions of the archaeological sites that cannot be avoided and where appropriate, the DRPT shall conduct Phase III archaeological data recovery in areas with the potential for intact subsurface remains prior to ground disturbing activities and within two (2) years of receipt of Project construction funding in this segment as described under Stipulation V(C). The archaeological work at all three sites shall include the following components:

    a. DRPT shall develop a separate draft data recovery plan per site for the investigations and submit the plan concurrently to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment, as appropriate. The plan shall be consistent with the Secretary of the Interior's *Standards and Guidelines for Archaeological Documentation* (48 Fed. Reg. 44734–37, September 29, 1983) and take into account the ACHP's publication, *Treatment of Archaeological Properties* (1980). Each plan shall include:

1) The property, properties, or portions of properties where site-specific data recovery plans shall be carried out;

2) Any property, properties, or portions of properties that will be destroyed or altered without data recovery;

3) The research questions to be addressed through data recovery, with an explanation of their relevance and importance;

4) The methods to be used with an explanation of their relevance to the research questions;

5) The methods to be used in analysis, data management, and dissemination of data, including a schedule;

6) The proposed disposition of recovered materials and records;

7) Proposed methods of disseminating the results of the work to interested individuals and/or organizations who have expressed an interest in the data recovery; and

8) A schedule for the submission of progress reports to the Virginia SHPO.

b. Upon revision of the plan and acceptance of the three data recovery plans by the FRA and Virginia SHPO, the DRPT shall complete or cause to be completed all GIS overlays and archaeological excavation described in the recovery plan at each site. Depending on the approved data recovery plan, one report containing data on all three excavations may be produced, or three separate documents may be completed. In either case, the report(s) will meet all state standards for data recovery reports and include required components. DRPT shall submit draft copies of the ensuing report concurrently to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment. Final copies of the report shall be disseminated to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and Library of Virginia for their collections, and to other Consulting Parties upon request. Final VCRIS forms and associated packets will be given to the DHR at this time for their archives.

2. Using the information gathered during the mapping and data recovery, within four (4) years of the receipt of Project construction funding in this segment as described under Stipulation V(C), the DRPT shall produce, or cause to be produced, a cohesive scholarly article discussing the historical and archaeological importance of these three sites. The FRA, DRPT, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and the other Consulting Parties shall discuss the location for submittal for publication, and the final publication submittal location shall be determined based on consensus of involved parties. The DRPT shall submit the article to the agreed upon location and shall have no other obligations with respect to any actions that may be taken by the publisher once the article is submitted and accepted or declined, except that DRPT shall undertake any revisions or provide other assistance requested by the publisher if the article is accepted for publication.

3. Within three (3) years of receipt of funding for Project construction in this segment, as described under Stipulation V(C), the DRPT shall provide, or cause to be provided, a lecture for the general public on the results of the archaeological studies on these three sites, preferably to be presented in the City of Richmond. This lecture shall be advertised in the Richmond area and the surrounding region.

4. Within three (3) years of the receipt of funding for Project construction in this segment, the DRPT shall fund the fabrication and installation of an interpretive sign within or near Main Street Station as part of station's interior design or exterior landscaping to disseminate information about the history of this area and the archaeological studies completed at Sites 44HE1098, 44HE1097, and 44HE1094 to the general public. In consultation with the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, property owner, and other Consulting Parties, the DRPT shall prepare, or cause to be prepared, draft text and layout for the signage. The draft text and layout shall be submitted to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, property owner, and other Consulting Parties for review and comment. If the signage text and layout are acceptable to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, property owner, and other Consulting Parties, the DRPT shall produce the signage panel and install the panel in a location deemed suitable by the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, property owner, and other Consulting Parties, as applicable. The owners and managers of Main Street Station are under no obligation to approve the signage. If the owners and managers of Main Street Station do not approve the signage to be a part of their facility, the DRPT shall consult with the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties to determine an appropriate method to interpret the historic properties to the public.

O. Main Street Station and Trainshed (DHR Inventory No. 127-0172)

1. Draft designs for platform modifications to Main Street Station and Trainshed shall be compatible with the architectural and historic character of the building and nearby historic properties. The DRPT shall submit draft design plans for modifications at the schematic, 30%, 65%, and 90% stages concurrently to the FRA, Virginia SHPO, City of Richmond, Richmond Commission of Architectural Review, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment. The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed platform structure design in relation to the building and nearby historic properties to show proposed visual modifications.

2. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation V(C), the DRPT shall create, or cause to be created, a historic context on the evolution of the rail system in downtown Richmond. This includes acquiring archival data on the establishment of and modifications to the earliest rail lines in the city, development of the RF&P rail line, creation of the Atlantic Coast Line Railroad and the Seaboard Air Line Railroad, and the physical impacts of the different lines on downtown Richmond, including buildings, structures, and landscapes that represent this evolution. The data obtained during the research shall be compiled into a report. The DRPT shall submit a draft report concurrently to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment. The DRPT shall disseminate the final report to the FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and Library of Virginia, and to other Consulting Parties and public libraries and historical societies for their collections, upon request.

3. Upon completion of the context, the DRPT shall create, or cause to be created, an abbreviated narrative on the history of the railroad in Richmond with accompanying visuals, as well as details of the Project, and post the document on the Online Exhibits page of the Valentine Museum's webpage (https://thevalentine.org/exhibitions/online/) or on another webpage deemed appropriate for the subject matter. The data can be uploaded as a stand-alone webpage or as a downloadable .pdf. The data will remain on their webpage for a minimum of two (2) years. The DRPT shall submit a draft of the webpage content concurrently to the FRA, Virginia SHPO, City of Richmond, The Valentine, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment. The DRPT shall disseminate the final webpage to The Valentine for their placement on the webpage. The Valentine is under no obligation to approve the webpage. If the Valentine does not approve the webpage content to be a part of their digital programming, the DRPT shall consult with the FRA, Virginia SHPO, City of Richmond, Historic

Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties to determine an appropriate method to disseminate this data to the public.

P. Seaboard Air Line Railroad Corridor (DHR Inventory No. 127-6271.

1. Draft designs for modifications to contributing resources to the Seaboard Air Line Railroad Corridor shall be compatible with the architectural and historic character of the rail corridor. The DRPT shall submit draft design plans for modifications at the schematic, 30%, 65%, and 90% stages concurrently to the FRA, Virginia SHPO, City of Richmond, Richmond Commission of Architectural Review, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment. The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed structure design in relation to the building and nearby historic properties to show proposed visual modifications.

2. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation (C), the DRPT shall create, or cause to be created, a historic context on railroad depots and associated facilities along the Seaboard Air Line Railroad in Virginia. This includes acquiring archival data on the history of past and present historic buildings developed as part of the Seaboard Air Line Railroad system between Richmond and the North Carolina state line.

   As part of this contextual study, the DRPT shall document, or cause to be documented, all stations and towers that are contributing elements to the Seaboard Air Line Railroad that have not been previously recorded with the Virginia SHPO. The DRPT shall prepare, or cause to be prepared, photographic documentation of each structure consistent with guidance found in "Photographic Documentation for National Park Service Basic Survey" and DHR's "Photographic Documentation for Virginia Department of Historic Resources (DHR) Survey" (Updated 2016); and complete a Virginia SHPO Intensive Level Survey form for each recorded depot and tower in the Virginia SHPO's VCRI system.

   The data obtained during the contextual research and architectural study will be documented in a written report. The DRPT shall submit a draft report concurrently to the FRA, Virginia SHPO, City of Richmond, Richmond Commission of Architectural Review, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment. The DRPT shall disseminate the final report to the FRA, Virginia SHPO, City of Richmond, Richmond Commission of Architectural Review, Historic Richmond Foundation, Preservation Virginia, NTHP, Virginia Historical Society, Library of Virginia, and to other Consulting Parties and public libraries and historical societies for their collections, upon request. Final VCRIS forms and associated packets will be given to the DHR at this time for their archives.

III. PROFESSIONAL QUALIFICATIONS

A. All cultural resource work carried out pursuant to this PA shall be conducted by or under the direct supervision of an individual or individuals who meet, at a minimum, the Secretary of the Interior's Professional Qualifications Standards for Preservation Professionals (48 Fed. Reg. 44738–44739 (September 29, 1983)).

B. In preparing all archaeological studies resulting from this PA, the preparer shall take into account the ACHP's publications, *Section 106 Archaeology Guidance* (2009) and *Recommended Approach for Consultation on Recovery of Significant Information from Archeological Sites* (1999) as well as state-specific archaeological guidelines on best practice and procedure, as applicable.

C. In preparing all architectural studies resulting from this PA, the preparer shall take into account guidelines on specific architectural projects issued by the U.S. Department of the Interior/National Park Service (such as the Bulletin entitled *How To Complete the National Register Registration Form)* and state-specific guidelines on best practices and procedures, as applicable.

IV. PREPARATION AND REVIEW OF DOCUMENTS

A. All studies, technical reports, and treatment plans prepared pursuant to this MOA shall be consistent with pertinent standards and guidelines including, as applicable, *The Secretary's Standards and Guidelines for Historical Documentation* (48 Fed. Reg. 44728-30), *The Secretary's Standards and Guidelines for Architectural and Engineering Documentation* (48 Fed. Reg. 44730-34), *Archaeology and Historic Preservation: Secretary of the Interior's Standards and Guidelines* (48 Fed. Reg. 44716-44742, September 29, 1983), the ACHP's *Treatment of Archaeological Properties: A Handbook*, the ACHP's *Recommended Approach for Consultation on Recovery of Significant Information from Archaeological Sites* (1999), and the Virginia SHPO's *Guidelines for Conducting Historic Resources Survey in Virginia* (October 2017), or subsequent revisions or replacements to these documents and are in accordance with 36 C.F.R. § 800.11(d) and (e) per the SEHSR PA Stipulation IV.

B. The DRPT shall provide the Virginia SHPO two (2) copies (one [1] bound archival hard copies and one [1] in Portable Document Format (PDF) on compact disc or other electronic format that is acceptable to the DRPT and Virginia SHPO) of all draft and final reports prepared pursuant to this MOA. The DRPT shall also provide a hardcopy of any draft and final report to the Consulting Parties to this MOA unless a Consulting Party requests the material in another format acceptable to the DRPT. The requesting Consulting Party must submit such requests to the DRPT in writing. The DRPT shall provide a hardcopy of all final reports to all non-Consulting Party recipients as identified in the stipulations above.

C. The Virginia SHPO and other Consulting Parties agree to provide comments on all Project plans, technical reports, treatment plans, and other documentation arising from this MOA to DRPT within thirty (30) calendar days of receipt of complete information. If the DRPT does not receive comments from the Virginia SHPO or other Consulting Parties within the thirty (30) calendar-day review period, the DRPT may assume that the non-responding party has no comments. The DRPT shall ensure that all comments received within the thirty (30) calendar-day review period are addressed in the final product.

D. Notwithstanding any other commitments herein to distribute documentation to FRA, DRPT shall provide FRA with a final copy of any Project plans, technical reports, treatment plans, and other documentation arising under this MOA once it has been agreed upon by Virginia SHPO and DRPT and any relevant Consulting Parties. All submissions to FRA should be in electronic format unless electronic format is not feasible or practical.

V. ANTI-DEFICIENCY ACT AND APPROPRIATIONS

A. All requirements set forth in this MOA requiring the expenditure of Federal Government funds are expressly subject to the availability of appropriated funds. Nothing in this MOA shall be interpreted to establish obligations or require payments in violation of the Anti-Deficiency Act (31 U.S.C. § 1341). The DRPT shall notify the Signatories and Consulting Parties when it has acquired the funding for the Project, including funding for any phase of the project, as contemplated in Stipulation V(C).

B. All requirements set forth in this MOA requiring the expenditure of Commonwealth of Virginia funds are expressly subject to the appropriation of funds by the Virginia General Assembly, and, if applicable, the allocation of funds by the Commonwealth Transportation Board.

C. Funding sources for construction of the Project have not yet been determined. It is expected that there will be a mix of federal, state and local funding. There is a potential for funding to be available in phases. The mitigation measures for the treatment of adversely affected historic properties described in Stipulation II will apply as funding is obtained for the Project phase where each resource is physically located. There is no obligation to implement the mitigation measures identified in Stipulation II prior to receipt of funding.

VI. UNEXPECTED DISCOVERIES AND IMPACTS

A. In the event that previously unidentified archaeological resources are discovered during ground disturbing activities within the APE, but outside of the boundaries of a recorded archaeological site, the DRPT shall immediately temporarily halt all construction work involving subsurface disturbance within fifty (50) feet of the discovery and in the surrounding area where further subsurface resources can reasonably be expected to occur and immediately notify the FRA and the Virginia SHPO of the discovery. See Subsection E below for additional information on the duration of the temporary halt. In the case of potentially prehistoric or historic Native

American sites, the FRA shall also notify federally recognized Indian tribes with interest in the area and the DRPT shall notify appropriate Virginia Indian tribes within two (2) working days of the discovery.

B. The DRPT shall ensure that an archaeologist meeting the *Secretary of the Interior's Professional Qualification Standards* (48 Fed. Reg. 44739) investigates the work site and the resource, and then the DRPT shall forward to the FRA, the Virginia SHPO, the federally recognized Indian tribes with an interest in the area, and appropriate Virginia Indian tribes an assessment of the NRHP eligibility of the resource (36 C.F.R pt. 60.4) and proposed treatment actions to resolve any adverse effects on historic properties. The Virginia SHPO, the federally recognized Indian tribes, and the Virginia Indian tribes shall respond within five (5) working days of receipt of the DRPT's assessment of NRHP eligibility of the resource and proposed action plan. The DRPT, in consultation with the FRA, shall take into account the recommendations of the Virginia SHPO, the federally recognized Indian tribes, and the Virginia Indian tribes regarding NRHP eligibility of the resource and the proposed action plan, and then carry out the appropriate actions.

C. In the event that above-ground historic properties within the APE, but not among the 21 adversely effected resources listed in this MOA, are inadvertently affected during construction, the DRPT shall immediately temporarily halt all construction work involving subsurface disturbance within fifty (50) feet of the impacted resource and in the surrounding area where further subsurface resources can reasonably be expected to occur and immediately notify the FRA and the Virginia SHPO of the issue. See Subsection E below for additional information on the duration of the temporary halt. As appropriate, FRA and DRPT shall also notify Consulting Parties regarding the impact, as appropriate.

D. The DRPT shall ensure that an architectural historian or historic architect meeting the *Secretary of the Interior's Professional Qualification Standards* (48 Fed. Reg. 44739) investigates the work site and the resource, and then the DRPT shall forward to the FRA, the Virginia SHPO, and appropriate Consulting Parties an assessment of the impacts to the resource's integrity and proposed treatment actions to resolve any adverse effects on historic properties. The Virginia SHPO and Consulting Parties shall respond within five (5) working days of receipt of the DRPT's assessment of impacts and proposed action plan. The DRPT, in consultation with the FRA, shall take into account the recommendations of the Virginia SHPO and Consulting Parties regarding the impacts and the proposed action plan, and then carry out the appropriate actions.

E. The DRPT shall ensure that ground disturbing activities within the affected area do not proceed until the appropriate treatment measures are developed and implemented or the determination is made.

VII. HUMAN REMAINS

The DRPT shall ensure that human skeletal remains and associated funerary objects encountered during the course of actions taken as a result of this MOA shall be treated in accordance with the Regulations Governing Permits for the Archaeological Removal of Human Remains (Virginia NRHP 390–01–02) found in Va. Code Ann. §§ 10.1–2305, *et seq.*, the Virginia Antiquities Act as well as the ACHP's "Policy Statement Regarding Treatment of Burial Sites, Human Remains, and Funerary Objects" adopted on February 23, 2007. The DRPT shall obtain a permit from the Virginia SHPO for the removal of human remains in accordance with the regulations stated above, as appropriate.

VIII. USE OF MOA BY OTHER FEDERAL AGENCIES

A. Another Federal agency with an undertaking relating to the Project may adopt this MOA and agree to comply with its terms to fulfill its Section 106 responsibilities, as provided for in Stipulation IX of the SEHSR PA.

B. In the event that a Federal agency other than FRA is considering funding, permits, licenses, or approvals for the Project, such Federal agency may become a signatory to this MOA as a means of complying with its responsibilities under Section 106 for its undertaking relating to the Project. To become a signatory to this MOA, the agency official must provide written notice to the Signatories that the agency agrees to the terms of the MOA, specifying the extent of the agency's intent to participate in the MOA, and identifying the lead Federal agency for the undertaking. The participation of the agency is subject to approval by the Signatories, who must respond to the written notice within thirty (30) days or the approval will be considered implicit. Any other modifications to the MOA will be considered in accordance with Stipulation X.

IX. DISPUTE RESOLUTION

A. Should any Signatory or Consulting Party to this MOA object in writing to the FRA regarding any action carried out or proposed with respect to any undertakings covered by this MOA, or to the implementation of this MOA, the FRA shall consult with the objecting party to attempt to resolve the objection within thirty (30) days of receipt of the written objection.

B. If after initiating such consultation, the FRA determines within the thirty (30) day period in subparagraph A that the objection cannot be resolved through consultation with the objecting party, the FRA shall then consult with all Signatories to resolve the objection. If the objection still cannot be resolved within thirty (30) days of all Signatories being advised of the objection and so consulted, the FRA shall then forward all documentation relevant to the objection to the ACHP, including a proposed response to the objection, and request the ACHP's comment on the objection as described in subsection (C) of this Stipulation IX.

C. When forwarding relevant documentation and a proposed response to ACHP, FRA shall request that within thirty (30) days after receipt the ACHP exercise one of the following options:

1. Advise the FRA that the ACHP concurs with the FRA's proposed response to the objection, whereupon the FRA shall respond to the objecting party accordingly; or

2. Provide the FRA with one or more ACHP recommendations for resolving the objection, which the FRA shall take into account in reaching a final decision regarding its response to the objection, which it shall render within ten (10) days of receiving ACHP's recommendation(s).

D. Should the ACHP not exercise one of the above options within thirty (30) days after receipt of all pertinent documentation and proposed response, the FRA may assume the ACHP's concurrence withe the FRA's proposed response to the objection.

E. The FRA shall take into account any ACHP recommendation provided in accordance with this Stipulation IX with reference only to the subject of the objection. The FRA's responsibility to carry out all other actions under this MOA that are not the subject of an objection made pursuant to this Stipulation IX shall remain unchanged.

F. At any time during implementation of the measures stipulated in this MOA should an objection pertaining to this MOA be raised by a member of the public, the FRA shall notify the Signatories to this MOA and take the objection into account, consulting with the objector and with the Signatories to this MOA in an effort to resolve the objection to follow the SEHSR PA Stipulation XI.B..

X. AMENDMENTS AND TERMINATION

A. Any Signatory to this MOA may propose to the FRA that the MOA be amended, whereupon the FRA shall consult with the other Signatories to consider such an amendment. All Signatories to the MOA must agree to the proposed amendment in accordance with 36 C.F.R. § 800.6(c)(7).

B. If the FRA and DRPT decide they shall not proceed with the Project, they shall so notify the other Signatories and Consulting Parties in writing, and this MOA shall become null and void.

C. If the FRA and DRPT determine that they cannot implement the terms of this MOA, or if the Virginia SHPO determines that this MOA is not being properly implemented, the FRA and DRPT jointly, or the Virginia SHPO individually, may propose to the other parties that this MOA be amended or terminated.

D. This MOA may be terminated by any of the Signatories to the MOA in accordance with the procedures described in 36 C.F.R. § 800.6(c)(8). Termination shall include the submission of a technical letter report to the Virginia SHPO by the FRA and

DRPT on any work done up to and including the date of termination. FRA and DRPT shall ensure that any associated collections and records recovered are curated in accordance with state guidelines. If the Virginia SHPO is unable to execute another memorandum of agreement following termination, the Virginia SHPO may choose to modify, suspend, or revoke the mitigation concurrence.

E. In the event that this MOA is terminated, and prior to work continuing on the Project, the FRA shall either reinitiate consultation and comply with 36 C.F.R part 800 or request the comments of the ACHP under 36 C.F.R § 800.7(a). The FRA shall notify the Signatories as to the course of action it will pursue.

XI. EFFECTIVE DATE

This MOA shall be effective as of the date of last signature by all Signatories.

XII. DURATION

This MOA shall continue in full force and effect for fifteen (15) years after the effective date. At any time in the six (6)-month period prior to the expiration of that initial term, the Signatories may consult to consider extending or modifying this MOA. No extension or modification shall be effective unless all parties to the MOA have agreed with it in writing. Any extension or modification of this MOA shall be in accordance with Stipulation X.

XIII. NO WAIVER OF SOVEREIGN IMMUNITY

Nothing in this MOA shall be deemed a waiver of a Signatory's sovereign immunity.

XIV. EXECUTION

This MOA may be executed in counterpart. The FRA shall ensure that each of the Signatories is provided a copy of the executed MOA

Execution of this MOA by the FRA, ACHP, the DRPT, and the Virginia SHPO, and its submission to the ACHP pursuant to 36 C.F.R § 800.6(c), is evidence that the FRA has afforded the ACHP an opportunity to comment on the proposed Project and its effects on historic properties, and that the FRA has taken into account the effects of the Project on historic properties and is documentation of the FRA's decision made pursuant to Section 106 for the purposes of Section 110(l) of the NHPA (54 U.S.C. § 306114).

APPENDIX A: List of Cultural Resource Reports Completed on the DC2RVA Project Area

Archaeological Sites/Resources (in publication order)

Klein, Mike, Emily Calhoun, Marco González, and Earl E. Proper
2015 *Archaeological Background Review and Predictive Model for the Washington, D.C. to Richmond, Virginia, Southeast High Speed Rail Corridor*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

McCloskey, Kevin, Earl Proper, Curtis McCoy, Emily Calhoun, Morgan MacKenzie, and Joseph Blondino
2016 *Phase IB Archaeological Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Rosslyn to Alexandria (ROAF) through Buckingham Branch/Hospital Wye (BBHW) Segments*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

McCloskey, Kevin, Emily Calhoun, Kerry González, and Mike Klein
2018 *Phase IB Archaeological Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Preferred Alternative Limits of Disturbance*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Buildings, Structures, Objects, and Districts (in publication order)

Staton, Heather Dollins, and Adriana Lesiuk
2015 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Dahlgren Junction to Fredericksburg (DJFB) Segment, City of Fredericksburg and Stafford County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Staton, Heather Dollins, Adriana Lesiuk, and M. Chris Manning
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Arkendale to Dahlgren Junction (ARDJ) Segment Stafford County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Staton, Heather D., Adriana T. Lesiuk, and Emily K. Anderson
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Rosslyn to Alexandria (ROAF) Segment Arlington County and the City of Alexandria*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Staton, Heather Dollins, Adriana T. Lesiuk, Emily K. Anderson, and Earl P. Proper
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Alexandria to Franconia (AFFR) Segment City of Alexandria and Fairfax County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Manning, M. Chris, Earl Proper, Adriana Lesiuk, and Heather Dollins Staton
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Franconia to Lorton (FRLO) Segment Fairfax County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Staton, Heather Dollins, M. Chris Manning, and Adriana Lesiuk
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Lorton to Powells Creek (LOPC) Segment Prince William and Fairfax Counties*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Anderson, Emily K., and Heather D. Staton
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Fredericksburg to Hamilton (FBHA) and Hamilton to Crossroads (HAXR) Segments, Spotsylvania County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Manning, M. Chris, and Michelle Salvato
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Crossroads to Guinea (XRGU), Guinea to Milford (GUMD), and Milford to North Doswell (MDND) Segments Spotsylvania, Caroline, and Hanover Counties*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Lesiuk, Adriana T., and M. Chris Manning
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Elmont to Greendale (ELGN) Segment, Hanover and Henrico Counties*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Sylvester, Caitlin C., and Heather D. Staton
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Greendale to SAY/WAY (GNSA), SAY/WAY to AM Jct (SAAM) and Buckingham Branch/Hospital Wye (BBHW) Segments, Henrico County and City of Richmond*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Anderson, Emily K., and Heather D. Staton
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project AM Jct to Centralia - S Line (AMCE) and AM Jct to Fulton Yard (AMFY) Segments, City of Richmond and Chesterfield County.* DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Lesiuk, Adriana T., and Heather D. Station
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project WAY to Centralia – A Line (WACE) Segment, Chesterfield County and City of Richmond*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Peckler, Danae
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project North Doswell to Elmont (NDEL) Segment, Hanover County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Chase, Kristine A.
2017 *Architectural Reconnaissance Survey of Structures for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Rosslyn to Alexandria (ROAF) through Buckingham Branch/Hospital Wye (BBHW) Segments*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Moss, Adriana T., and Kerri S. Barile
2018 *Addendum: Architectural Reconnaissance Survey of the LOD Expansion Area for the Washington, D.C. to Richmond, High Speed Rail Project, Arlington, Caroline, Chesterfield, Hanover, Henrico, Fairfax, Prince William, Stafford, and Spotsylvania Counties and the Cities of Alexandria, Fredericksburg, and Richmond, Virginia*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Barile, Kerri S., Kristine A. Chase, Sean Maroney, Adriana T. Moss, Danae Peckler, and Heather Dollins Staton
2018 *Architectural Intensive Investigations for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project (Report A).* DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Barile, Kerri S., Melissa Butler, Adriana T. Moss, Danae Peckler, Heather Dollins Staton, Caitlin Sylvester, and Lenora Wiggs
2018 *Architectural Intensive Investigations for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project (Report B).* DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Barile, Kerri S., Melissa Butler, Adriana T. Moss, Heather Dollins Staton, Caitlin Sylvester, and Lenora Wiggs
2018 *Architectural Intensive Investigations for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project (Report C)*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Combined Cultural Resources/Reconnaissance Studies (in publication order)

Staton, Heather Dollins, and Earl E. Proper
2016 *Archaeological and Architectural Phase IA Study for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Ashland Bypass (ASBP) Segment, Hanover County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Staton, Heather Dollins, D. Brad Hatch, and Emily Calhoun
2017 *Archaeological and Architectural Phase IA Study for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Fredericksburg Bypass (FBBP) Segment, Stafford, Caroline, and Spotsylvania Counties*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

APPENDIX C: Meetings and Correspondence with Consulting Parties

Meetings

Date	Attendees	Topics
November 7, 2014	DHR, DRPT	Kick-off meeting; discussions on APE, methodology, reporting
March 19, 2015	VDOT, DRPT	Roadway bridges and Section 106 coordination
February 18, 2016	DHR, DRPT	Update on corridor and status of studies
June 14, 2016	CWT	General discussion on results to date; Richmond to Raleigh Memorandum of Agreement
August 10, 2016	DHR, DRPT	Preliminary dialogue on historic properties and Project effect
May 15, 2017	Ashland Museum, Town of Ashland	Overview of 106 process and technical studies to date
June 8, 2017	NPS- Fredericksburg, DRPT	Update on technical studies and Project plans
July 14, 2017	Town of Ashland; Ashland Museum	Update on technical studies and Project plans
July 26, 2017	DHR, DRPT	Update on technical studies and Project schedule
August 14, 2017	NPS—Richmond, DRPT	Update on technical studies and Project plans
October 11, 2017	Hanover County, Town of Ashland, Ashland Museum	Update on technical studies and Project plans
October 20, 2017	Alexandria Archaeology, City of Alexandria, Arlington County, NTHP, DRPT	Update on technical studies and Project plans
October 24, 2017	ACHP, ABPP, CWT, DRPT	Update on technical studies and Project plans
October 27, 2017	Prince William County, Caroline County, City of Fredericksburg, CVBT, HFFI, DRPT	Update on technical studies and Project plans
October 30, 2017	City of Richmond, Historic Richmond Foundation, DRPT	Update on technical studies and Project plans
February 8, 2018	Rose Center/Urban Land Institute, DRPT	Overview of Project and history of Shockoe Bottom
February 13, 2018	DHR, DRPT	Update on technical studies and Project schedule
April 4, 2018	DHR, DRPT	Discussion of Project limits of disturbance and APE
June 18, 2018	Town of Ashland, Ashland Museum	Historic property list and 106 process
June 19, 2018	DHR, DRPT	Historic properties and Project effect
June 21, 2018	CWT, Historic Richmond Foundation, Town of Ashland, Ashland Museum, Preservation Virginia, DRPT	Historic properties and Project effect
June 26, 2018	ABPP, City of Fredericksburg, NPS Fredericksburg, DRPT, FRA	Historic properties and Project effect
June 28, 2018	NTHP, Alexandria Archaeology, NPS—Mount Vernon Parkway, ACHP, DRPT	Historic properties and Project effect
July 2, 2018	DHR, FRA, DRPT	Revisit of historic properties and Project effect
July 16, 2018	Town of Ashland, Ashland Museum	Technical reports and Project effect

Date	Attendees	Topics
July 17, 2018	NPS- Fredericksburg	DC2RVA LOD and Jackson's Shrine
July 17, 2018	Preservation Virginia	DC2RVA Project summary and list of historic properties
July 19, 2018	City of Richmond, DRPT	Historic properties and Project effect
July 24, 2018	DHR	Resources in Shockoe Bottom
July 26, 2018	FRA, DHR, DRPT	Resources in Shockoe Bottom
July 27, 2018	ACHP	Resources in Shockoe Bottom
July 31, 2018	DHR, FRA, DRPT	Resources in Shockoe Bottom
August 3, 2018	DHR	Resources in Shockoe Bottom
August 6, 2018	DHR, DRPT, VA Secretary of Transportation, VA Secretary of Natural Resources	Discussion on historic resources in Shockoe Bottom
August 29, 2018	City of Richmond, DHR	Resources in Shockoe Bottom, City preservation initiatives near Main Street Station and future projects
September 5, 2018	VA Secretary of Transportation, DHR, DRPT, City of Richmond	Discussion of cultural resources in Shockoe Bottom
September 10, 2018	NTHP, Preservation Virginia, Sacred Ground Project, ACHP, DHR, DRPT	Discussion of upcoming meeting in Shockoe/Richmond, including meeting content and attendees
October 2, 2018	FRA, DHR, ACHP, DRPT	Summary of three October 2018 consulting party meetings, Resources in Shockoe Bottom, Next steps in 106 process
October 2, 2018	DRPT, City of Alexandria	List of historic properties, project effect
October 4, 2018	City of Fredericksburg, Prince William County, Ashland Museum, Alexandria Archaeology, DRPT, FRA	APE, list of historic properties, project effects, MOA mitigation
October 5, 2018	American Battlefield Trust (Civil War Trust), ABPP, Alexandria Archaeology, NPS- Mount Vernon Parkway, NPS- National Capital Region	APE, list of historic properties, project effects, MOA mitigation
October 12, 2018	NTHP, Shockoe Partnership, ACHP, Preservation Virginia, City of Richmond, Slave Trail Commission, Historic Richmond Foundation, Untold RVA, DHR, FRA, DRPT, private citizens	On-site visit at Main Street Station, APE, list of historic properties, project effects, MOA mitigation
October 15, 2018	Historic Richmond Foundation, DRPT	Resources in Shockoe Bottom, list of historic properties, project effect, MOA mitigation
October 23, 2018	ACHP, DHR, FRA, DRPT	Update on consulting party meetings, list of historic properties, project effect
October 24, 2018	Ashland Museum, Town of Ashland, DRPT	List of historic properties, project effect, MOA mitigation
November 1, 2018	Preservation Virginia, DRPT	Resources in Shockoe Bottom, list of historic properties, project effect, MOA mitigation
November 2, 2018	Elegba Folklore Society, DRPT	Summary of project, Resources in Shockoe Bottom, list of historic properties, project effect, MOA mitigation

Date	Attendees	Topics
November 28, 2018	NTHP, DRPT	Discussion on reply sent to NTHP on Historic Properties
December 3, 2018	NTHP, Preservation Virginia, Historic Richmond Foundation, Elegba Folklore Society, City of Richmond, DRPT, FRA, ACHP, DHR	Additional discussion on reply sent to NTHP, historic properties in Shockoe Bottom, and effect on historic properties

Correspondence Sent to Consulting Parties

Date	Medium	Recipient	Topic
September 25-October 15, 2014	E-mail; Letter	DHR, FRA, DRPT	Initiation of Section 106 Process
January 5- February 2, 2015	E-mail, Letter	DHR, FRA, DRPT	Defining Project APE
June 8, 2015	E-mail	VDOT	VDOT/DHR PA on Historic Bridges
June 22, 2015	Letter	Civil War Trust, DRPT	Receipt of comments on Project screening review
July 30, 2015	E-mail	All Consulting Parties, DRPT	Distribution of Archaeological Predictive Model report for review
July 17, 2015; August 28, 2015	Letter, E-mail	DHR	Submittal of Archaeological Predictive Model Report; DHR Reply

June 21, 2016; June 28, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segments 8-9); DHR reply
July 6, 2016; July 22, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 1); DHR reply

Date	Medium	Recipient	Topic
July 6, 2016; July 15, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 2); DHR reply
July 25, 2016; August 15, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segments 10-12); DHR reply
December 21, 2016; February 21, 2017	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 13); DHR reply
August 3, 2016; August 22, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 14); DHR reply
September 6, 2016; October 11, 2016	Letter, E-mail	DHR	Submittal of Archaeological Phase I Report (Original Segments 1-20); DHR reply
October 21, 2016; November 30, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segments 15, 16, 20); DHR reply
November 14, 2016; December 22, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segments 17, 19); DHR reply
October 21, 2016; November 3, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 18); DHR reply
January 20, 2017; March 1, 2017	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Structures); DHR reply
January 6, 2017; February 3, 2017	Letter, E-mail	DHR	Submittal of Phase IA Ashland Bypass Report; DHR reply
January 20, 2017; February 3, 2017	Letter, E-mail	DHR	Submittal of Phase IA Fredericksburg Bypass Report; DHR reply
February 24, 2017; March 24, 2017	E-mail	All Consulting Parties	Distribution of Architectural Reports for review; Consulting Party comments
March 28, 2017	E-mail	All Consulting Parties	Update on technical study distribution
April 14, 2017; May 14, 2017	Letter; E-mail	All Consulting Parties	Distribution of All Phase IA and IB reports for review; Consulting Party comments
May 17, 2017	E-mail	All Consulting Parties	Reminder of comment deadline for reports
June 1, 2017	E-mail	All Consulting Parties	Extension of deadline for comments on reports
September 19, 2017	E-mail	All Consulting Parties	Summary of upcoming Draft EIS meetings and offer for on-on-one meetings
October 7, 2017	E-mail	All Consulting Parties	Reminder of Draft EIS meetings
November 2, 2017	E-mail	All Consulting Parties	Distribution of historic map overlays showing Shockoe Bottom
November 21, 2017	Letter; E-mail	Professor J.V. Moeser, Secretary of Transportation	Resources in Shockoe Bottom
February 7, 2018	E-mail	All Consulting Parties	Update on LOD and technical studies progress
February 13, 2018	Letter; Email	Tribes who received federal status in 2018	Invitation to participate in project; Updates on project to date and future steps (Tribes were included on all subsequent All Consulting Party communication)
May 8, 2018	E-mail	All Consulting Parties	Update on distribution of LOD and Phase II technical reports
May 14, 2018; June 12, 2018	E-mail	DHR	Submittal of Archaeological LOD Expansion Areas Report; DHR reply
May 17, 2018; July 20, 2018	E-mail	All Consulting Parties	Distribution of Archaeological LOD Expansion Areas Report for review; Consulting Party comments
May 4, 2018; June 11, 2018	E-mail	DHR	Submittal of Architectural LOD Expansion Areas Report for review; DHR reply
May 17, 2018; July 20, 2018	E-mail	All Consulting Parties	Distribution of Architectural LOD Expansion Areas Report for review; Consulting Party comments

Date	Medium	Recipient	Topic
March 22, 2018; April 25, 2018	E-mail	DHR	Submittal of Architectural Phase II Report A; DHR reply
April 19, 2018; May 1, 2018	E-mail	DHR	Submittal of Architectural Phase II Report B; DHR reply
May 10, 2018; June 12, 2018	E-mail	DHR	Submittal of Architectural Phase II Report C; DHR reply
May 17, 2018; July 20, 2018	E-mail	All Consulting Parties	Distribution of Architectural Phase II Reports (A-C) for review; Consulting Party comments
June 13, 2018	E-mail	All Consulting Parties	Reminder of upcoming series of Project meetings
June 20, 2018; June 28, 2018	Letter, E-mail	DHR	Submittal of Project effects letter; DHR reply
June 20, 2018	E-mail	All Consulting Parties	Update on Project effects and reminder of upcoming series of Project meetings
July 9, 2018; July 18, 2018	Letter; E-mail	DHR	Submittal of Addendum Project effects letter; DHR reply
July 9, 2018	E-mail	All Consulting Parties	Update on Addendum Project Effects
July 20, 2018	E-mail	All Consulting Parties	Reminder of deadline for report and effects comments
August 14, 2018	E-mail	FRA, DHR, DRPT	Framework of MOA for review
August 23, 2018	E-mail	All Consulting Parties	Update on project including receipt of comments on reports, APE, and list of historic properties
September 21, 2018	E-mail	All Consulting Parties	Invitation to three October Consulting Party Meetings
September 21, 2018	E-mail	Shockoe Bottom Neighborhood Assn; Historic Shockoe Partnership; Slave Trail Commission; Elegba Folklore Society; Black History Museum Virginia Untold VA; Virginia African American Cultural Resources Task Force; Southern Environmental Law Center; Sacred Ground Project; Community Unity in Action, Richmond Branch NAACP; Wesley Memorial United Methodist Church; VCU Department African American Studies; Richmond Crusade for Voters; First Unitarian Universalist Church; Sacred Ground Historical Reclamation Project; VCU, Building on Sacred Ground	Invitation to Shockoe Bottom/Richmond Consulting Party Meeting

DC2RVA- SUMMARY OF MITIGATIONS

(Yellow= Added or Modified Since Distribution of Preliminary List)

Resource	**Mitigation Criteria for Historic Properties**	**Comment**
Richmond, Fredericksburg and Potomac Railroad (RF&P) (500-0001)	Architectural evaluation/Phase II-level study of bridges to be demolished as part of the project that are contributing elements to the railroad district	
	Oral histories of two individuals with an in-depth knowledge/long tenure working on structures along historic RF&P	
	~~Historic context on the evolution of railroad structures along the RF&P~~	*Removed per dialogue with the DRPT and consulting parties based on the addition of the story map below*
	Creation of an online project map/story board to highlight historic properties along the corridor.	*Added based on consulting party feedback*
RF&P Bridge over Occoquan River (500-0001-0022)	Design review of new structure to assure historic resource compatibility	
	Historic American Engineering Record (HAER) documentation of extant structure	
Rippon Lodge (076-0023)	Design review of new structure to assure historic resource compatability	
	Cultural landscape study of the Neabsco Creek watershed between Rippon Lodge and the Neabsco Creek Bridge	
	Interpretive sign on Neabscro Creek watershed to be placed along Blackburn Road or in another location deemed suitable by Prince William County	*Location of sign modified based on consulting party feedback*
	Assist with restoration of Rippon/Neabsco Creek viewshed through removal of underbrush; mature trees remain extant	*Added based on consulting party feedback*
Site 44ST1223 (Civil War Campsite)	Archaeological data recovery on the portion of the site to be impacted by the project	
	Installation of interpretive sign on archaeology and camp life in a location deemed appropriate by NPS-Fredericksburg	*Added based on consulting party feedback*
	Scholarly article discussing the historical and archaeological importance of the site	
Rappahannock River Railroad Bridge & Structures/ Platform (111-0132-0025)	Design review of new structure to assure historic resource compatibility	
	Historic American Engineering Record (HAER) documentation of extant structure	
	Cultural landscape study of the Rappahannock River watershed and historic transportation crossings within the City of Fredericksburg	
Sites 44SP0187 (Marye's Mill), 44SP0688 (Block 49), and 44SP0687 (Block 48)	Archaeological data recovery on the portions of each site to be impacted by the project	
	Scholarly article discussing the historical and archaeological importance of these three sites	
	Lecture presented to the general public on the history and archaeology of the three sites	
	Museum display in new train station to highlight the sites and showcase artifacts retrieved during data recovery	*Added based on consulting party feedback*
	Interpretive sign to be placed within or near Fredericksburg rail station describing the archaeology of the area	
Fredericksburg Historic District (111-0132)	Design review of new parking deck and train station to assure historic district compatibility	
	Historic context on the evolution of the rail system in downtown Fredericksburg	
	Lecture for the general public on the results of the contextual study on the evolution of the railroad in Fredericksburg	
	Abbreviated narrative for use in developing a webpage on the history of the railroad in Fredericksburg, as well as details of the Project	
Site 44SP0468 (Jackson's Earthworks)	Archaeological data recovery on the portion of the site to be impacted by the project	
	Installation of interpretive sign on archaeology and camp life in a location deemed appropriate by NPS-Fredericksburg	*Added based on consulting party feedback*
	Scholarly article discussing the historical and archaeological importance of the site	

Resource	Mitigation Criteria for Historic Properties	Comment
Doswell Historic District (042-5448)	NRHP nomination form for the historic district	
	Virginia state historical highway marker on the Doswell Historic District	
	Abbreviated narrative for use in developing a webpage on the history of Doswell, as well as details of the Project	
Doswell Depot and Tower (042-0093)	Historic American Building Survey (HABS) Level II documentation of the tower	
	Move tower from limits of disturbance to new site adjacent to tracks but outside project limits	
	Interpretive sign to be placed within or near depot or tower on the history of the resource	
Berkleytown Historic District (166-5073)	Design review of new road structure to assure historic district compatibility	
	Oral histories of two individuals with long tenure living or working in district	
	NRHP nomination form for the historic district	
	Create text for historic walking tour of district in consultation with Town of Ashland and Ashland Museum	*Added based on consulting party feedback*
	Virginia state historical highway marker on the Berkleytown Historic District	
Laurel Industrial School Historic District (043-0292) and Main Building/Robert Styles Building (043-0292-0001)	Design review of new road structure to assure historic district compatibility	
	Historic context on late-nineteenth/early-twentieth century reform schools in Central Virginia	
	Series of georeferenced, GIS-based overlays to illustrate the evolution of the landscape and road system in this area	
	Interpretive sign to be placed within or near Main Building on the history of the resource	
Shockoe Valley & Tobacco Row Historic District (127-0344)	Design review of new structures to assure historic district compatibility	
	Historic context on the association of the RF&P railroad and the slave trade including community engagement and ethnographic research regarding current significance of slave trade and surrounding district to descendent community	*Expanded based on consulting party feedback*
	Lecture presented to the general public on the association of the RF&P railroad and the slave trade	
	Virginia state historical highway marker documenting the slave trade and nearby associated sites	
	Work with City of Richmond, consulting parties, and DHR to add a geographic boundary to the multiple property nomination for slave trade in this area by helping to identify potential sites	*Expanded based on consulting party feedback*
Main Street Station and Trainshed (127-0172)	Design review of platform modifications and new structures to assure resource compatibility	
	Historic context on the evolution of the rail system in downtown Richmond	
	Webpage documenting the evolution of the rail system in downtown Richmond	
Seaboard Air Line Railroad Corridor (127-6271)	Design review of modifications to contributing elements to the district to assure resource compatibility	
	Historic context on railroad depots along the Seaboard Air Line Railroad in Virginia	
	Phase I documentation of stations and towers that are contributing elements to the Seaboard Air Line Railroad that have not been previously recorded with the Virginia SHPO	
Sites 44HE1098, 44HE1097, and 4HE1094	Archaeological data recovery on the portions of each site to be impacted by the project	
	Scholarly article discussing the historical and archaeological importance of these three sites	
	Lecture presented to the general public on the history and archaeology of the three sites	
	Interpretive sign to be placed within or near Main Street Station describing the postbellum and 20th century history and archaeology of the area

Hey there,

Just a quick reminder that comments on the draft of the DC2RVA MOA are technically due tomorrow, January 25th. I say "technically" because our NPS friends have not been able to review the document due to the furlough. As such, the comment deadline is flexible but the sooner you can provide feedback, the better, as it will allow a more thorough review of comments and inclusion in the next version of the document.

As always, if you have questions, I'm here to help! Emily Stock is also happy to answer any larger project questions you may have too.

Thanks so much!
Kerri

Hey folks,

Welcome back, NPS friends! I know you likely have a bazillion things to get caught up on, so a new deadline for comments for the DC2RVA MOA is next **Friday, February 8 by COB**. This is for all consulting parties. If you have questions on the materials, just let me know.
Thanks!
Kerri

Hi Kerri,

Although late (shocker!) we can let you know that Alexandria Archaeology has no comments to the add to the MOA.

Best,

Garrett

Many thanks for sharing, Kerri.

The draft MOA and approach to mitigation outlined therein are in keeping with the comments previously submitted by the Trust in this regard (including our most recent comment letter submitted on June 28, 2018, in combination with related follow-up comments submitted via e-mail on October 17, 2018 — copies of both of which are attached).

Thank you again for your consistent outreach to us on this project — and please continue to keep us up-to-date moving forward.

Appreciatively,

Mark

Subject: DC2RVA Rail/Draft MOA for review

Hello all,

I hope you had a great holiday!

Thank you all, again, for your continued participation in the DC2RVA rail cultural resource process. Your feedback has been invaluable! I wanted to provide a brief update and share some documents to you for your review.

Since our last set of meetings this fall and our subsequent emails and calls, we have continued to refine the list of historic properties along the corridor and work with the FRA/DRPT/DHR/ACHP to determine effects. A final effect determination was received from the DHR, and thus a final roster of historic properties (n=120) and their respective effects is attached for your reference. Most of the details of this roster have been shared with you over the past several months. This list includes all remaining requests from consulting parties and reflects the final determinations.

Concurrently, we have been working on a project Memorandum of Agreement (MOA) which outlines steps to mitigate the adverse effects to 21 resources along the corridor. A preliminary mitigation list was sent around and discussed during our meetings/emails/calls, and the list of mitigations has been refined based on your incredible feedback. Your requested changes are reflected in the MOA. The document is currently under review by the signatories (FRA, DRPT, ACHP, and DHR), but we also wanted to send it to our consulting parties for your comments. I've attached the MOA here as well as a summary table that can be used as a "cheat sheet" to see all of the mitigations in one place. This excel sheet also notes the mitigations that were added or expanded based on your feedback from the original roster.

We request that you take a look at the MOA by **January 25th** and email us your comments. As always, I'm here to answer any questions or just chat process!

Again, my sincere thanks for your contributions to date!

Best,

Kerri

Suite 502
Fredericksburg, VA 22408

Dear Dr. Barile:

I am writing on behalf of the American Battlefield Trust ("the Trust"), a nonprofit, nonpartisan organization dedicated to preserving America's hallowed battlegrounds and educating the public about what happened there and why it matters today. To date, the Trust has protected more than 50,000 acres associated with the Revolutionary War, War of 1812 and Civil War in 24 states, including 25,652 acres in the Commonwealth of Virginia.

With this letter, the Trust seeks to follow up on the "Project Update & Effect Discussion with Consulting Parties" hosted by the Washington, D.C., to Richmond Southeast High Speed Rail (DC2RVA) project team in Richmond on June 21, 2018. We appreciate your continued consultation with the Trust and our partners in preservation as the DC2RVA project has advanced; this letter is the third in a series of comments that the Trust has provided since the project's commencement (with previous letters dated June 22, 2015, and November 3, 2017).

The project team's ongoing evaluation of potential impacts to battlefields and related resources — as well as the proactive way in which the team has conducted its outreach to consulting parties and stakeholders — have been welcomed by the Trust. During our most recent meeting with the DC2RVA team in Richmond, the Trust took advantage of the opportunity to ask the team a number of questions, with none more important than our inquiry confirming whether or not the primary, battlefields-centered finding of the project's Tier II Draft Environmental Impact Statement (Draft EIS) continues to hold true.

Pg. 4-155 of the Draft EIS, which was received by the Trust in 2017, asserts the following: "Based on preliminary dialogues with DHR [the Virginia Department of Historic Resources], the Project would have No Adverse Effect on any of the 11 battlefields within the APE [Area of Potential Effects]." We are grateful to the project team for its assurance at this month's gathering that it remains the case that no battlefield in the APE is to be adversely affected, as well as for efforts taken by the project team — and subsequently described to the Trust — to successfully ensure that desired rail improvements in the vicinity of the Trust's Slaughter Pen Farm property in Spotsylvania County will not exceed existing right-of-way onto land previously preserved by the Trust or the National Park Service (NPS).

The Trust was likewise pleased to receive confirmation from the DC2RVA team that it remains in close contact regarding this project with NPS — in particular, with NPS personnel

AMERICAN BATTLEFIELD TRUST CIVIL WAR TRUST REVOLUTIONARY WAR TRUST

BATTLEFIELDS.ORG

both at the American Battlefield Protection Program as well as at individual parks throughout the project area, such as Fredericksburg and Spotsylvania National Military Park. It is appropriate to reiterate here a request which the Trust has made previously: If the determination that neither the Slaughter Pen Farm nor any of the battlefields within the project's APE will be subject to adverse effect as a result of the project is revised or otherwise revisited at any point, the Trust requests immediate notification of this fact as well as the opportunity to consult with the DC2RVA team at the earliest possible time thereafter.

We appreciate your notification regarding the pair of historic properties connected to the Civil War upon which DHR has determined the DC2RVA project will have an adverse effect: the "Civil War Campsite" in Stafford County (DHR ID 44ST1223) and the "Earthwork" in Spotsylvania County (DHR ID 44SP0468). The Trust encourages the DC2RVA team to collaborate jointly with NPS, DHR, Civil War Trails as well as the Trust's own historians at the appropriate time to determine an ideal approach to interpreting these sites which could serve to mitigate the project's expected impacts. Particularly given the earthwork's location — as well as what the DC2RVA team notes is its "notable connection to military actions during the war" — we believe that both it and the Stafford campsite ("one of many Union army winter encampments in the area … during the winter of 1862-1863") hold important stories that such mitigative interpretation could assist in illuminating for Virginians and Virginia's many visitors alike.

Once again, the Trust looks forward to receiving and reviewing continued project updates from the DC2RVA team in the months ahead. Please do not hesitate to contact us directly with any questions at (202) 367-1861, and thank you for the opportunity to provide these updated comments on DC2RVA's progress to date.

Sincerely,

O. James Lighthizer, President

Attachments:	ABT Comments - DC2RVA June 2018 Project Update and Effect Discussion (FINAL - 6-28-2018).pdf

Thanks, Kerri.

As we commented in June and sought to underscore at the meeting earlier this month, those of us at the Trust believe that the "historic properties connected to the Civil War upon which DHR has determined the DC2RVA project will have an adverse effect … hold important stories that … mitigative interpretation could assist in illuminating for Virginians and Virginia's many visitors alike."

Interpretive signage is certainly one option — but we encourage the DC2RVA team to consult directly with the officials at Fredericksburg and Spotsylvania National Military Park on whether this is indeed the best option, particularly at site 44SP0468. John Hennessy, Eric Mink and team will likely have a good sense of what would be ideal and may be able to suggest a path forward wherein the new interpretation could be seamlessly woven into the park's existing interpretative offerings.

The Trust's primary interest is in ensuring that the form of interpretation pursued is one that the public will be able to readily access and appreciate.

Thanks again for your ongoing outreach and associated efforts on this front.

Yours,

Mark

Subject: DC2RVA/Mitigation for War-Related Resources

Hi there,

Thanks again so much for coming to the meeting the other week for DC2RVA rail! I wanted to check back in on mitigation for impacts to war-related resources, as discussed at the meeting. It sounded like you all were fairly comfortable with the rough mitigation as suggested so long as we add a couple of public outreach components, namely interpretive signs and publication of an article and/or presentation of a public talk on the results. Would this work? Anything else to add? I'm compiling all feedback and thoughts so we can move forward with a few steps.

If feedback is easier by phone, just let me know and we can set up a call. Happy to!

Thanks so much,
Kerri

To: Kerri Barile <kbarile@dovetailcrg.com>

Kerri,

I wasn't going to respond figuring you would understand The Ashland Museum is OK with summary you sent since we had worked it out with you. After reading through ACHP edits, I don't want silence to be interpreted as disinterest in the communications or opting out of any communications.

Thank you for working with us on the Berkleytown modification. We note the addition and we are fine with the mitigation summary as it pertains to Berkleytown.

As it is apparent that both ACHP and NTHP have done a knowledgable review of the MOA, The Ashland Museum, a Consulting Party, adds our name to their comments and concerns.

Thanks.

Kerri,

Thank you for the opportunity to review the attached documents, especially the draft MOA. I appreciate the Commission of Architectural Review being added as a consulting party for items M through P, pages 23-29. I respectfully request that the City of Richmond, Planning and Preservation Division, be added to the discussions and dissemination of reports associated with items M through P, pages 23-29. While the City of Richmond is listed as a consulting party, the division is responsible for planning and preservation activities citywide and should be included in these activities.

Thank you,

Kim

Hello all,

I hope you had a great holiday!

Thank you all, again, for your continued participation in the DC2RVA rail cultural resource process. Your feedback has been invaluable! I wanted to provide a brief update and share some documents to you for your review.

Since our last set of meetings this fall and our subsequent emails and calls, we have continued to refine the list of historic properties along the corridor and work with the FRA/DRPT/DHR/ACHP to determine effects. A final effect determination was received from the DHR, and thus a final roster of historic properties (n=120) and their respective effects is attached for your reference. Most of the details of this roster have been shared with you over the past several months. This list includes all remaining requests from consulting parties and reflects the final determinations.

Concurrently, we have been working on a project Memorandum of Agreement (MOA) which outlines steps to mitigate the adverse effects to 21 resources along the corridor. A preliminary mitigation list was sent around and discussed during our meetings/emails/calls, and the list of mitigations has been refined based on your incredible feedback. Your requested changes are reflected in the MOA. The document is currently under review by the signatories (FRA, DRPT, ACHP, and DHR), but we also wanted to send it to our consulting parties for your comments. I've attached the MOA here as well as a summary table that can be used as a "cheat sheet" to see all of the mitigations in one place. This excel sheet also notes the mitigations that were added or expanded based on your feedback from the original roster.

We request that you take a look at the MOA by **January 25th** and email us your comments. As always, I'm here to answer any questions or just chat process!

Again, my sincere thanks for your contributions to date!

Cheely, Claudia <cdcheely@hanovercounty.gov> Thu, Jan 24, 2019 at 11:12 AM
To: Kerri Barile <kbarile@dovetailcrg.com>

The next meeting date of the Hanover County Historical Commission is February 19th; I will share the MOA then. I have reviewed the MOA and it represents the mitigation discussed previously. I do have one question: There are references to the Hanover County Historical Society, the first of which is in the paragraph stating they were asked to participate but did not respond. So, in later paragraphs regarding the mitigation proposed for the Doswell Historic District, should the references be to the Historical Commission since they are the historical organization with Hanover that did review the project?

Subject: DC2RVA Rail/Draft MOA for review

Hello all,

I hope you had a great holiday!

Thank you all, again, for your continued participation in the DC2RVA rail cultural resource process. Your feedback has been invaluable! I wanted to provide a brief update and share some documents to you for your review.

Since our last set of meetings this fall and our subsequent emails and calls, we have continued to refine the list of historic properties along the corridor and work with the FRA/DRPT/DHR/ACHP to determine effects. A final effect determination was received from the DHR, and thus a final roster of historic properties (n=120) and their respective effects is attached for your reference. Most of the details of this roster have been shared with you over the past several months. This list includes all remaining requests from consulting parties and reflects the final determinations.

Concurrently, we have been working on a project Memorandum of Agreement (MOA) which outlines steps to mitigate the adverse effects to 21 resources along the corridor. A preliminary mitigation list was sent around and discussed during our meetings/emails/calls, and the list of mitigations has been refined based on your incredible feedback. Your requested changes are reflected in the MOA. The document is currently under review by the signatories (FRA, DRPT, ACHP, and DHR), but we also wanted to send it to our consulting parties for your comments. I've attached the MOA here as well as a summary table that can be used as a "cheat sheet" to see all of the mitigations in one place. This excel sheet also notes the mitigations that were added or expanded based on your feedback from the original roster.

We request that you take a look at the MOA by **January 25th** and email us your comments. As always, I'm here to answer any questions or just chat process!

Again, my sincere thanks for your contributions to date!

Best,

Kerri

Hi Kerri – Please find attached comments from the National Trust for Historic Preservation on the draft MOA. I layered our comments on top of the ACHP's for ease of review.

In general, we agree with the comments from the ACHP stating that there is a need to provide greater clarity throughout the document on how mitigation measures will be implemented. Also, as noted in our comments, we believe that additional clarity is needed about how consulting parties will remain involved during implementation of the MOA. Additional comments and language suggestions regarding the project's impacts in Richmond's Shockoe Bottom area are also included.

We appreciate this opportunity to provide comments. Please don't hesitate to contact me with any questions.

Sincerely,

Sharee

Subject: DC2RVA Draft MOA: ACHP Comments

Dear Kerri,

The Advisory Council on Historic Preservation (ACHP) has completed its review of the *Draft Memorandum of Agreement among the Federal Railroad Administration, the Virginia Historic Preservation Office, the Advisory Council on Historic Preservation, and the Virginia Department of Rail and Public Transportation Regarding the Washington, D.C. to Richmond, Virginia Southeast High Speed Rail Project* submitted to ACHP via email on January 22, 2019.

This is a comprehensive Memorandum of Agreement (MOA) and it contains a good process for addressing the undertaking's adverse effects. Our comments generally focus on clarifying roles and responsibilities, ensuring consistency in the administrative stipulations with our guidance, and addressing the applicability of design guidelines for any new construction in or near historic properties. We have provided our comments, insertions, and red line edits in the attached Word document.

We understand FRA's desire to move forward with this agreement. This Section 106 agreement document, therefore, should adhere to our regulations and be comprehensive so as to avoid the potential for subsequent procedural challenges. Accordingly, we urge FRA to consider revising the agreement document to address all comments provided by consulting parties. If you have any questions, please feel free to contact me.

Thank you,

Sarah

Thanks so much! Here's a revised first sentence of that clause as approved by DRPT. This work?

Within one (1) year of the completion of the cultural landscape study, DRPT shall engage a qualified consultant to restore the viewshed between Rippon Lodge and the Neabsco Creek rail bridge through the removal of underbrush as depicted in Appendix D.

I say "technically" because our NPS friends have not been able to review the document due to the furlough. As such, the comment deadline is flexible but the sooner you can provide feedback, the better, as it will allow a more thorough review of comments and inclusion in the next version of the document.

Hello all,

I hope you had a great holiday!

Thank you all, again, for your continued participation in the DC2RVA rail cultural resource process. Your feedback has been invaluable! I wanted to provide a brief update and share some documents to you for your review.

Since our last set of meetings this fall and our subsequent emails and calls, we have continued to refine the list of historic properties along the corridor and work with the FRA/DRPT/DHR/ACHP to determine effects. A final effect determination was received from the DHR, and thus a final roster of historic properties (n=120) and their respective effects is attached for your reference. Most of the details of this roster have been shared with you over the past several months. This list includes all remaining requests from consulting parties and reflects the final determinations.

Concurrently, we have been working on a project Memorandum of Agreement (MOA) which outlines steps to mitigate the adverse effects to 21 resources along the corridor. A preliminary mitigation list was sent around and discussed during our meetings/emails/calls, and the list of mitigations has been refined based on your incredible feedback. Your requested changes are reflected in the MOA. The document is currently under review by the signatories (FRA, DRPT, ACHP, and DHR), but we also wanted to send it to our consulting parties for your comments. I've attached the MOA here as well as a summary table that can be used as a "cheat sheet" to see all of the mitigations in one place. This excel sheet also notes the mitigations that were added or expanded based on your feedback from the original roster.

We request that you take a look at the MOA by **January 25th** and email us your comments. As always, I'm here to answer any questions or just chat process!

Again, my sincere thanks for your contributions to date!

Best,

Kerri

Kerri,

We have reviewed the MOA in regards to Berkleytown and concur with the recommendations. Thank you for your assistance.

Hello Mr. Kirchen;

I am writing to discuss with you some concerns regarding the 1816 Burying Ground for Free People of Colour and for Slaves on Shockoe Hill and the Dovetail Phase IB archealogical survey report for the high speed rail project. Steve Thompson and I have been discussing the project with (especially the burial grounds) with Joanna Green. Please feel free to discuss this with Joanna. It is my understanding that you are the person that I should talk to in regards to the high speed rail project. One of my direct ancestors would have been buried at the location - I mention this to explain my interest and connection to the burial grounds.

I am going to be forwarding to you information and the questions that were being asked of Joanna as I would like to direct the questions and information to you. I have included Steve Thompson of Rivanna Archaeological Services on this email.

Dovetail's Phase IB archaeological survey report for the high speed rail project and also VDHR's letter of concurrence.
https://www.dropbox.com/sh/o3hhulgwvhxi59q/AAA7w5ToYoF9PxLuCdV3P2CEa?dl=0

cemetery site using its ID (44HE1203)

Would you please clarify DHR's position? Please see the email below to Joanna from Steve Thompson:

....

Joanna,

I've had a chance to look at Dovetail's high speed rail Phase IB report and DHR's comments. For clarification, in concurring with Dovetail's conclusion that the cemetery (44HE1203) remains "unevaluated as the portions of the site within the project APE are minimal" and that "the portion in the APE does not contribute to its overall eligibility," is it DHR's position that no further work at the site is warranted prior to future phases of the high speed rail project, at least as regards Section 106? The concern solely with NRHP eligibility seems sort of odd to me; quite apart from NRHP eligibility, wouldn't the project also be required to make a good faith effort to determine whether burials survive within the limits of disturbance so as not to be in violation of state law? Assuming it is accurate, Dovetail's placement of the cemetery in Figure 4-103, Map 2 in their report suggests that a considerable portion of the cemetery lay south of present-day Hospital Street. While it is hard to argue with their conclusion that the Hospital Street road cut would have removed all evidence of the cemetery within its course and in the cut along its north side, it is not clear to me that the same can be said of the south side of the street where burial of historic grade under (late 19th - 20th-century?) fill seems a possibility.

Steve

Email 2: Saturday Dec 22, 4:36pm

Mr. Kirchen,

is the rest of the burial grounds that wraps around to the North of the Hebrew Cemetery and Alms House being considered in regards to the rail project? Would that area not be affected by high speed rail? The burials that took place outside of the walls of the Shockoe Hill Cemetery, it is my understanding that those burials were made back there. And I believe that the burial ground for people of colour and for slaves was extended back to that area. That area near the burial ground and behind the Alms House was also the site of the Gallows. Though it appears that black people were executed at or near their burial ground. The burials were made right next to where the person was hung. Supposedly John and Jane Williams were executed near the Powder Magazine according to what I read.

Yours truly,

Lenora

Email 3: Saturday Dec 22, 6:07pm

Mr. Kirchen,

would you mind looking at this please? I noticed the location of 127-6659 The Powder Magazine (historical) below. According to the 1864 Map of the City of Richmond, that is not where the Powder Magazine was located in 1864 when it was blown up on evacuation day. There was mention in the City Council records that the magazine was in need of repair. The specifics were not given in the City Council minutes, but according to the maps it seems to me that it was moved to a slightly different location. A newspaper account regarding the incident of the explosion states that the magazine was somewhat in a ravine.

Lenora

Email 4: Saturday Dec 22, 7:01pm

Mr. Kirchen-

these are examples of just a few of the burials that occurred outside of the Shockoe Hill Cemetery Walls. Below are two pages from the Shockoe Hill Cemetery Burial Register. To my understanding they would have been buried on the hill behind the Alms House and Hebrew Cemetery. Though the place for those burials does not appear on maps. It is my understanding that the boundaries of the burial grounds beyond that which is behind the cemetery walls have not been established and over time the burial grounds were extended.

12/19/1848 - Jno Madery age 36, Pauper, Buried Outside
12/19/1848 - Mary Thomas's child age 5 days, Buried Outside
12/25/1848 - Jno Madery's infant Child, Buried Outside
12/26/1848 - Daniel Delaney age 45, Buried Outside
01/09/1849 -Ellen Lew age (no age), Buried Outside
1/20/1849 - Mrs. Francis Brown age 66, Buried Outside

Email 5: Monday Dec 24, 9:46am

Mr. Kirchen,

I would like to include a few more maps of the burying ground for you to consider. The first is the 1905 Sanborn Fire Insurance Map of the City of Richmond from the Library of Congress. It appears according to this map that the railroad tracks were built right on top of the burying ground and that the burying ground extends to the north of the tracks. One of the questions in my mind is were burials disturbed when the tracks were laid, or were the tracks laid right on top of the graves? On the 1876 or 1877 Beers Atlas and the Baist Atlas of 1889 the burial ground appears to extend to the edge of Bacon Quarter Branch. The tracks were laid south of the Bacon Quarter Branch. I have also included two map overlays of the burial grounds from the 1835 and 1877 maps from the blog of historical architect Gibsom Worsham. He posted them to Urban Scale Richmond. The map images show that the burial ground extends to the south of present day Hospital Street, and a good deal to the North of the railroad tracks.

I look forward to hearing from you.

Yours truly,

Lenora

Email 6: Monday Dec 24, 6:17pm

Mr. Kirchen,

I am requesting please that mapping out of actual parcels from deed records be done. This should be part of the high speed rail project's due diligence for the burying ground location on Shockoe Hill in it's entirety.

It is my opinion that the burial grounds may extend into all of the parcels marked below.

Yours truly,

Lenora

Email 7: Saturday January 5, 3:42pm

Roger,

thank you and Mr. Holma for taking my concerns regarding the 1816 Burying Ground for Free People of Colour and for Slaves into consideration. I look forward to hearing from you again once you are able to make your review.

The passage below is from the book "The Military History of the Virginia Military Institute from 1839 to 1865, page 406 appears to show that the burial ground was extended to the area behind the Alms House. It says that to the rear of the Alms House is where the colored cemetery was located, as well as the gallows. Not mentioned here, though I probably already did mention that I believe that the paupers buried outside of the walls of the Shockoe Hill Cemetery were buried behind the Alms House as well.

Yours truly,

Lenora

RE: Circa 1816 “Graveyard for Free People of Color and Slaves” (archaeological site 44HE1203)

Dear Ms. McQueen:

Thank you very much for your inquiry into the Washington, D.C. to Richmond High Speed Rail (DC2RVA) project and cultural resource studies in Richmond, Virginia. Your emails, authored between December 22, 2018 and January 5, 2019, were sent to us by the Virginia Department of Historic Resources (DHR)—the Virginia State Historic Preservation Office. In particular, your emails raised questions on the DC2RVA project and the Graveyard for Free People of Color and Slaves (site 44HE1203) and included numerous maps and other historical records. We are pleased to have this opportunity to share additional data on the work done to date on this resource as well as upcoming research tasks associated with the historic experience of enslaved individuals in Richmond.

As you know, the DC2RVA project has required compliance with the National Historic Preservation Act of 1966. Archaeological and architectural surveys, as well as extensive archival research, were completed between 2015 and 2018 on areas within the project area of potential effects (APE). For archaeological resources, this primarily included areas that will be physically impacted by the proposed construction (also known as the Limits of Disturbance [LOD]). Cultural resource specialists have conducted archaeological studies on the entire 123-mile long corridor, recording dozens of sites. Upon recordation, the team worked very closely with project engineers and sponsors to assure that significant sites are avoided or, at a minimum, that any impacts are limited to the greatest degree possible.

Studies near the Graveyard for Free People of Color and Slaves (site 44HE1203) have been ongoing since 2015. As project plans have been developed, additional archaeological studies and archival research have been completed to assure that all portions of the APE have been thoroughly explored. This includes fieldwork as well as the creation of “georeferenced” overlays wherein historic maps are overlain on modern aerials to assure that all historic sites are taken into consideration in the APE. Near Hospital Street, Graveyard for Free People of Color and Slaves (site 44HE1203) was first identified by the DC2RVA team using this process and based on our overlay studies. It was recorded with DHR in the spring of 2018. The ensuing Phase I survey report, which you referenced in your emails, was the initial documentation of the site.

Although DHR concurred that the site had been impacted by area development, DHR, DRPT and the project team recognized the significance of this resource, and the site was determined to be a “historic property” for the purposes of this study (defined as a resource that is potentially eligible for, eligible for or listed on the National Register of Historic Places). This assured that the site was included in all dialogues regarding impacts from the proposed project.

The project team has also continued studies on Graveyard for Free People of Color and Slaves (site 44HE1203) since publishing the report in 2018 to assure that any areas with the potential to contain graves are avoided. Figure 1 (attached) shows a synthesis of some of the research and subsequent avoidance plans. This image depicts a modern aerial and the 1835 Bates map. Both show the graveyard site boundaries (in red) and the original project APE as shown in the Phase I report (in gold). Through numerous dialogues and work sessions completed after publication of the Phase I report, impacts to the site were avoided (in purple) by reducing the footprint in this area. Work will now parallel existing Hospital Street, and all work will be confined to the existing, disturbed road right of way. No physical impacts will be made outside of the existing road corridor. Figures 2–5 are current photographs that depict this disturbed right of way corridor and additional area changes caused by the installation of I-95 in the 1960s, construction of a gas station and subsurface storage tanks in the last quarter of the twentieth century (note: the gas station was on top of the Graveyard for Free People of Color and Slaves [site 44HE1203]), and building an office on the southwest corner of the graveyard site.

Knowing that burials are often not contained to mapped boundaries, similar studies were also rendered on adjacent sites that could contain additional burial areas, particularly the area to the north and west of the mapped boundaries of Graveyard for Free People of Color and Slaves (site 44HE1203). Figure 6 illustrates the current boundaries of the Hebrew Cemetery (architectural resource 127-6166) and the APE, highlighting the avoidance of this entire area to stay away from potential interments. All proposed work associated with the DC2RVA rail improvements in this area is designed away from the potential burial areas, on the north and east sides of the track. Moreover, the proposed work is confined to the existing rail right of way, a space within 15–25 feet of the existing track and an area that has been completely disturbed over the past century through rail construction and other land improvements. Archaeological studies have confirmed this disturbance.

Beyond technical studies, the team has also spent the past year working with various federal, state, and local agencies and historical groups to disseminate data on historic properties along the corridor with a particular focus on the Shockoe area of Richmond. Thirty-three Consulting Parties (formal groups with a vested interest in area history and prehistory), over a dozen agencies, and 23 individuals with knowledge of the African-American heritage of this area have been involved in ongoing dialogues, culminating in well over 100 meetings, emails, and telephone calls regarding resources in Richmond. The DC2RVA team is committed to soliciting feedback on cultural resources, and data provided by these groups has been included in subsequent coordination with DHR, in the Final Environmental Impact Statement (FEIS, ongoing), and in the draft Memorandum of Agreement

(MOA) written to outline mitigations to address project adverse effects to historic properties. This 65+-page MOA specifically highlights tasks that will be undertaken by DRPT to sponsor additional research on the African-American experience in historic Richmond, including: developing a historic context on the association between the railroad and the slave trade in Virginia, creating a webpage using the context data, crafting several sets of public signs outlining African-American history in this area, completing community engagement and ethnographic research regarding the history of this area and its importance to the African-American descendent community, and helping the City of Richmond develop a historic district inclusive of places of significance within the lexicon of the black experience in Shockoe, among other tasks. The Graveyard for Free People of Color and Slaves (site 44HE1203) will be included in these upcoming studies, and the research that you provided will be added to the collection of important data on this area. The team will also assure that your data is included in the existing site file located at the DHR, including the provided names of interred individuals, so that it may be seen by future researchers.

We understand that an on-site visit may be warranted to engage in a more robust dialogue on your concerns. As such, we are available to set up a meeting on site to include appropriate members of the project team so that we can view the current landscape, provide data on the DC2RVA project, and hear your concerns in person. Please contact us at Emily.Stock@drpt.virginia.gov/ 804-786-1052 or kbarile@dovetailcrg.com/ 540-899-9170 if you have any further questions, or would like to meet on site. If you prefer, we are also happy to participate in a call so we can describe the project verbally. We also encourage the participation of Steve Thompson from Rivanna Archaeological Services or any other individuals who may want to participate in this discussion and provide feedback. We look forward to hearing from you.

Respectfully submitted,

Dear Ms. Barile and Mr. Kirchen,

I am a faculty member in the Department of History at Virginia Commonwealth University. I am completing a book (under contract with the Johns Hopkins University Press) on the history and historic preservation of burial grounds in Richmond, Virginia which includes a chapter on the "second African Burial Ground," also known as the "Graveyard for Free People of Color and For Slaves" and as the "Potter's Field." For months, I have communicated with Lenora McQueen about the site and her connection to it. I have reviewed Emily Calhoun's 2013 report on the site and discussions of the site in the 2018 Phase 1B survey report from Dovetail. I write to share my opinion on the site as defined therein. In short, I share Ms. McQueen's concerns.

We can document use of the site beginning in 1816. By 1848, the site had grown so full that the city council expanded it southwest across Hospital Street, enclosing the grounds surrounding the new hospital to be used "as a Burying ground for coloured persons." Burials continued throughout both areas into the 1850s, as documented in Frederick Law Olmsted's description of a slave funeral there "near the foot of a hill, in a crumbling bank—the ground below being already occupied, and the graves apparently advancing in terraces up the hill-side.” The growing site was also documented in newspaper reports of hangings in the rear of the poor house where black victims were buried, in newspaper accounts of black graves being disturbed by construction of the new powder magazine after the Civil War and during construction of the first Fifth Street viaduct bridge in 1891, in city directories following the Civil War, and in the memoirs of a Virginia Military Institute attendee who described a "Colored Cemetery" to the rear of the almshouse. Lastly, the Library of Virginia has records from the city of Richmond dating to 1862 which include quarterly reports from the keeper of the burial grounds, listing the names of those interred, the dates of their interment, and the causes of death. What is consistent throughout all these sources is that the site was big - sprawling well beyond the limited two acres initially set aside in 1816, as reflected in subsequent maps shown in Calhoun's study and also shared with you by Ms. McQueen. Another consistency is that the site continually fell victim to predations from the white community.

Unfortunately, your current reporting suggests that some (many? most?) graves were removed from this site to the state penitentiary grounds. I regard this as pure speculation/folklore in the absence of concrete evidence. Even if true, the small number of graves that may have been removed could have represented only a small fraction of the total burials. And while it is true that much of this ground has been disturbed by transportation projects and industrial uses, these desecrations do not minimize the overall significance of the site as a place of memory.

The high speed rail project's proposed widening of the tracks and the further disturbance of Hospital Street will surely impinge upon this site. This project will make it even more difficult for the public and for descendants to recognize the site for what it was. It will add to the city's ongoing, active disregard for the site, exemplified by the earlier decision in 1959 to sell it to a private landowner for use as a gas station. I would hope that our state preservation office, and the cultural resource firms reporting to it, would be much more responsive to such continued minimization of the site and would revise those plans accordingly.

If I can supply you with any more documentation to help revisit these decisions, please let me know. Ms. McQueen can speak for the descendant community. But I can speak for the academic community and for the students whom I regularly take on site visits that the avoidance plans presented here seem inadequate and will materially affect our interpretation of the site. Sincerely,

Ryan K. Smith

January 24, 2019

Dear Ms. Barile and Ms. Stock

Thank you for copying me on your recent (01/16/2019) response to the concerns expressed by Lenora McQueen regarding potential impacts to the nineteenth-century site of Richmond's Graveyard for Free People of Color and Slaves (44HE1209) associated with the Washington, DC-Richmond highspeed rail project (DHR project file #2014-0666). As background to my involvement in this matter I should note that I have corresponded and collaborated regularly with Ms. McQueen, who lives in Texas, for the past ten years or so regarding her research into her family history, which reaches back into several prominent Antebellum Albemarle County plantations—most notably, Redlands, Morven, and Highland.

Ms. McQueen and I first became acquainted during my company's participation, from 2009 to 2012, in collaborative research undertaken with Monticello and University of Virginia archaeologists and historians at Morven, where Ms. McQueen's ancestral ties are particularly strong. At some point during that project, we learned through documentary research that one of Ms. McQueen's enslaved relatives moved from Albemarle to Richmond as part of the household of her recently-married Higgenbotham mistress/owner. Although long acquainted by email, Ms. McQueen and I met for the first time a little over one year ago when she traveled to Charlottesville as a panel participant in UVa's 2017 symposium on *Universities, Slavery, Public Memory, and the Built Landscape*. It was then that I first learned that Ms. McQueen had continued to pursue, in her characteristically thorough and resourceful and persistent style, this Richmond branch of her family. Roughly six months later, in May 2018, I received an email from Ms. McQueen informing me that she had learned, through internet research, that the so-called Talley Service Center parcel at 1305 N. 5th Street in Richmond (parcel ID N0000233006) was on a list of properties slated for public auction for delinquent taxes and asking for guidance. That was the point at which I began to learn about Richmond's Cemetery for Free People of Color and Slaves and Ms. McQueen's remarkable connections to this unrecognized (and unrecognizable) historic property. As you may know, Ms. McQueen was single-handedly responsible for having the mayor's office intervene and remove the Talley parcel from the auction block, widening the circle of those aware of this site, and greatly expanding, through her research, understanding of its history. For my part, I was able to provide Ms. McQueen access and insight into the recent "grey literature" relevant to the site and help her to understand why and how it was being considered by the DC-RVA highspeed rail project.

So, with that aside I offer the following comments based on my reading of CRA's 2015 report on geoarchaeological investigations within VDOT's I-64 right-of-way below the Shockoe Creek bridge, Dovetail's 2018 report on Phase IB archaeological investigations within the highspeed rail corridor, consideration of many aspects of Ms. McQueen's own copious research into this site that she regularly shares with me, and your January 16, 2019 letter…

Thank you very much for your quick and detailed response to our concerns. I am clearly a late-comer to this discussion, having arrived from a wholly different starting point, and have only recently learned of the role being played by the high-speed rail project in the research and understanding of Richmond's Graveyard for Free People of Color and Slaves. I am particularly pleased to learn of the extensive consultation and community engagement already undertaken and yet envisioned by your project. Before receiving your letter, I was completely unaware of the number of consulting parties involved in this undertaking and of the breadth and scope of their engagement, especially as regards the additional research and interpretive efforts that will be addressed through implementation of the mentioned MOA. That said, I continue to have outstanding questions and concerns that were not wholly addressed in your letter that I have tried to better articulate through the following series of questions and comments.

Questions and Responses

1) Are you able to share the MOA mentioned in your letter? Can you provide names of the Consulting Parties to this project? Can you provide minutes of meetings and/or other discussions and events that touch on or make specific mention of the Graveyard for Free People of Color and Slaves (44HE1203)?
2) Apart from the VDOT-sponsored research conducted within that department's right-of-way below the I-64 bridge, what are the other research efforts have been "ongoing since 2015" near the Graveyard for Free People of Color and Slaves mentioned in your letter? (The V-CRIS site form lists only a single CRM event – Dovetail's February 4, 2018 pedestrian reconnaissance of the locale.)
3) Can you please elaborate/explain the process of geo-registration of the 1835 Bates map? Specifically, what ground-control points were used in this registration? And, why does the southwesternmost corner of the cemetery not align with the present-day northeastern corner of the intersection of Fifth and Hospital streets, which would appear to be how the site was depicted by Bates? Some consideration of the assumptions and potential inaccuracies common to geo-registration of historic maps is appropriate in this context.
4) Why does the 1877 Beers map of Richmond (sheets from the 1889 Baist Atlas), showing a much enlarged "Potters Field," not receive equal consideration in the delineation of the boundaries of the historic cemetery? The evaluation of the site's potential significance in Dovetail's Phase IB report (p.4-225) (and in the V-CRIS site form) acknowledges that the cemetery was established around 1816 and that it may have lasted as late as 1890. However, explicit discussion and consideration of the cemetery's use through the middle and into the late nineteenth century, its likely expansion, and ultimate abandonment seems to only repeat research sponsored by VDOT in 2013. In particular, the anecdotal claim reported in 2013 that burials at the cemetery may have been relocated around 1890 in association with construction of the Northside/Fifth Street viaduct, though repeated, is not pursued or further substantiated. Lenora McQueen's research demonstrates very

clearly that the public cemetery that began as the "Graveyard for Free People of Color and Slaves" remained in operation and continued to receive significant numbers of African American burials until June 1879, with 1,770 African American burials reported by the cemetery's keeper in the six-and-a-half years between January 1873 and June 1879 (an average rate of more than 20 burials per month).[1] This evidence clearly indicates that the cemetery remained active—indeed, very much so—for nearly a half-century after publication of the Bates map and that it was substantially expanded beyond the boundaries shown on that early document. Inclusion and explicit discussion of the cemetery's depiction on the 1877 Beers map (and 1889 Baist Atlas) combined with understanding of its use after the Civil War as can be gleaned from other documentary sources arguably yields a much larger and historically more complicated site than that portrayed in the Phase IB report.

5) That said (and following on from Item 3, above), delineation of the cemetery's boundaries solely based on its depiction at the *margins* of nineteenth-century maps *of uncertain and possibly variable cartographic accuracy* seems misguided and other efforts to more accurately determine its boundaries should be explored. For example, identification, through deed research, and platting of the boundaries of the parcel sold by the City to E. G. Rex in 1866 or 1867 for the construction of a new powder magazine may help better understand the late-nineteenth-century limits of the cemetery.[2] Research into other deeds for neighboring properties and platting of their boundaries onto existing conditions and parcel maps, such as the tract purchased in the Bacon's Quarter Branch valley immediately north of the cemetery by Tanner & Delaney Engine Co. around 1881 (and later acquired by Richmond Locomotive & Machine Works c.1887), might also aid in more accurately establishing the boundaries of the City-owned cemetery. Similarly, exploring deeds and other documents associated with land acquisition and construction around 1900 of the Sea Board Airline Railroad may help to clarify the nineteenth-century boundary between publicly-owned (that may have received human burials) and privately held land to the north and east.

6) The physical evidence of the present-day landscape, as well as that collected by the VDOT-sponsored field research in 2013, abundantly supports the conclusion that the Graveyard for Free People of Color and Slaves/Potters Field has been heavily disturbed and that, at least in certain portions of the historic cemetery, the survival of intact burials seems highly unlikely. The Phase IB report and your letter highlight the depth of the cuts along the north side of Hospital Street and the west side of the I-64 right-of-way as good illustrations of this conclusion. However, using your registration of the 1834 Bates map

---

[1] "Note – The hill-side adjoining the Hebrew Cemetery, used for many years as a burial-place for colored persons, was abandoned in June last. These people are now interred in Oakwood Cemetery" (*Richmond Dispatch*, 1 January 1880). Counts of "colored" interments broken down between adults and children and often between men and women, as reported by the Superintendent of Shockhoe Hill Cemetery were reported, typically, in January, in the Richmond Dispatch. Colored interments were noted as being made "in ground adjacent" to the white Shockoe Hill cemetery.

[2] Richmond's powder magazine, apparently located east of Fifth Street and south of the present Hospital Street, was deliberately destroyed The recommendation by the City's Committee on Public Grounds and Buildings to sell "the ground north of that formerly occupied by the powder magazine" to E. G. Rex "for the re-erection of a powder magazine" was reported in the October 8, 1866 edition of the *Daily Dispatch*. The subsequent discovery of approximately 100 human skeletons during construction of the new magazine the following year was reported by the *Richmond Whig* (April 9, 1867) and *Daily Dispatch* (April 9, 1867).

how confident can we be that intact graves do not survive, possibly below fill, within the current LOD on the south side of Hospital Street? Are there other areas within the LOD, particularly north of the Hebrew Cemetery and Talley Service Center parcel that might also contain intact graves? Relying solely on visual examination of current conditions to assess whether intact burials are present seems inadequate and, at the very least, hypotheses about site and landscape modification should be tested through additional field investigation. While intact graves may not be present, what is the potential that disinterred and scattered human remains survive in disturbed surface soils within the LOD in the vicinity of the historic cemetery? Is more complete documentation, through a combination of archival research and archaeological/geo-archaeological field investigation, necessary to develop a more complete understanding of this site and its developmental history?

7) The Phase IB report limits discussion of the potential significance of the Graveyard for Free People of Color and Slaves/Potters Field to the possibility that intact graves belonging to the cemetery survive. In essence, the perspective articulated in the report is that if there is no evidence of graves, the property (by definition) lacks integrity and therefore cannot possess historical significance. However, suppose we think about the cemetery less in terms of its early – mid-nineteenth-century function and setting and more in terms of later nineteenth-century Jim Crow era historical themes? Although much research remains to be conducted, evidence currently available suggests that, following the impacts associated with the 1867 powder magazine construction, serious disturbances to (and perhaps, ultimately, destruction of) large parts of the historic cemetery were associated with the extension and widening of the Fifth Street corridor in the mid to late 1880s, itself part of the process of Richmond's demographic, and economic expansion and the opening of peripheral lands for new, predominately white, suburban development north of Bacon's Quarter Branch. Already in 1883, the Daily Dispatch was reporting that "improvements at the extreme north end of Fifth Street" were impinging upon "bodies buried in that locality," though whether these were Jewish, African American, or indigent bodies was not specified.[3] A pair of historic photographs held by the Valentine Museum and dating between approximately 1887 and 1891 and bracketing construction of the Fifth Street viaduct reveal very graphically the enormous extent of alterations to this location.[4]

   While the possibility that graves may have been relocated cannot be dismissed without further research, whatever happened to the cemetery must be considered in light of the comments of the editor of the *Richmond Planet*, the city (and state's) highly important African American newspaper, in 1896 that the city's expansion north entailed "the desecration of the burial ground on Poor-house Hill, North 5th Street" during which "graves were dug into, bones scattered, coffins exposed, and the hearts of the surviving families made to bleed by the desecration of the remains of their loved ones."[5] Not considering this later history of the Graveyard for Free People of Color and Slaves/Potters Field and confining consideration of its potential historical significance to the presence of intact graves and/or other surviving physical evidence of a former memorial or commemorative landscape, runs the very real risk of implying that the late-nineteenth-century destruction and desecration of sites integral to the formation and maintenance of African American cultural and community identity somehow lacks historical significance. The re-creation /re-birth of Richmond after the Civil War included a range of acts *both commemorative and destructive* that left their enduring marks on the City's landscape and these marks continue to influence and shape the way Richmond's residents and visitors alike understand its history.

[5] "The Colored Cemeteries," *Richmond Planet*, March 21, 1896, p.2

8) Phase II level research, both archaeological and documentary, is warranted at 44HE1203
    a. to more fully define the historic aerial limits of the Graveyard for Free People of Color and Slaves/Potters Field,
    b. to develop a clearer and more detailed understanding of the site's history of use and demise, and
    c. to provide a fuller consideration of the site's potential historical significance, especially in light of themes relevant to current understandings of Richmond's Reconstruction and Jim Crow era history and that expands consideration to include NR Criterion A (that the site is associated with events that have made a significant contribution to the broad patterns of our history).

This last item is undeniably challenging given that our accepted methods for discussing and evaluating the historical significance of cultural properties typically requires the presence of tangible, physical qualities. The current situation provides us all with an opportunity to consider how we might acknowledge and commemorate sites whose significance lies, at least in part, in their deliberate erasure/removal. Such sites necessarily lack integrity, but surely they remain imbued with historical significance.

Thank you for considering these thoughts and I look forward to our continued discussion,

Steve Thompson, PhD, RPA

Dear Roger and Kerri:

My 4th great-grandmother Kitty would have been buried in the slave burial ground at 5th and Hospital Street. She died a little over 160 years ago in the City of Richmond, in the home of her owner who lived on the south-side of Franklin between 6th and 7th. That place today is a parking garage. The daughter of her owner Elizabeth wrote a heartfelt letter to her sister in Philadelphia the very same morning that Kitty died, lovingly, but very sadly informing her sister of the death of their beloved Kitty. The letter brought tears to my eyes as I read of her long illness, and painful death. I was touched by how much love was expressed for her in that letter by Elizabeth. Kitty's daughters who were present were devastated. The other children and grandchildren unknowing of what had occurred - as they had been sold after the death of their owner a few years prior, splitting up the family. The deceased owner was Elizabeth's father. Elizabeth told of how she had Kitty's body neatly prepared for the grave, "it is what she would have done for me" she said. Kitty was dressed in the garment that she herself had requested for that purpose. Her last words she spoke to her children in an attempt to comfort them as she herself lay dying, seeing them weeping - "Don't cry children, don't cry for me, I am going home" - she breathed her last breath and died.

Elizabeth and her sister who also lived in Richmond intended to follow Kitty's body to the grave the next day. She indicated that their intention was that no respect would be spared for Kitty. My intention also is that no respect should be spared for Kitty, other family members buried there at the burial ground, or for the other many thousands that were interred at the cemetery at 5th and Hospital Street. In my eyes Kitty holds a place of high honor. And all of those people buried there were probably loved by someone. They were someone's child, someone's mother, someone's father, brother, sister, aunt, uncle, grandparent, grandchild, cousin, friend…… They were someone's someone. They are still someone's someone. They deserve to be honored. They deserve to be remembered. They deserve to have their story told, and no longer hidden. And they deserve to be allowed to rest in peace.

I came to Richmond last year to find Kitty (also others in the family). I had only known of the intention of her owner to keep her, the owner being the mother of Elizabeth. I had no idea of what had actually happened. So I came to Richmond, and I found Kitty. The excitement I felt when I realized that I could go to the place that she would have been buried. I remember the confusion, and the disappointment upon reaching my destination. I didn't understand the place at all, and I kept thinking that I must be in the wrong place, it can't possibly be this place... And I had hoped that I was in the wrong place. And I left there not knowing, until sometime later that it was actually the right place. How sad… That desolate hillside with an abandoned gas station on it and a billboard - It is so disrespectful. But with all that has happened there, it does not make that place not important. With all that has happened it does not make the people interred there not important. It deserves something better. They deserve something better. Even those whose skeletal remains were obviously moved, they deserve something better, as even today their essence remains.

I have been deeply involved in research trying to uncover the history of the place where my Kitty was laid to rest by those who loved her. It has been a horribly sad and disturbing journey seeing the degradation, the disrespect, and the destruction associated with this burial ground. I have no idea if she rests there in peace or if she fell victim to one of the many atrocities that befell that graveyard. Though even if she herself were untouched, how could she rest in peace? The history of the burial ground is tragic. It's story is also incomplete.

The very day after I read that letter for the first time telling of Kitty's death and while attending the symposium on the President's Commission on Slavery at the University of Virginia, I learned the first tragic piece of history directly connected to the graveyard. It was a main topic at the symposium - grave robbing for the medical colleges, and this graveyard was one of the targets. I was absolutely horrified. I later learned of the well at VCU where human remains were thrown away as if they were trash. The medical waste well at VCU that was accidentally uncovered dates to the time of this graveyard. That was only the first of several horrifying pieces of news regarding the burial ground that I received. Following was the news of the explosion of the gunpowder magazine on evacuation day in 1865. Then it appears that Hospital Street was moved, its course driven through the burial ground, and also the selling of a piece of the graveyard land for the construction of a new gunpowder magazine (more than 100 skeletons being uncovered when the foundation was dug in 1867). Perhaps the street was moved to accommodate the two new magazines that were built.

The archaeological testing and excavations that are mentioned in the 2013 VDOT report appears to have taken place in the same spot where the new Gun Powder Magazines were built. This is the land sold by the City in 1866 expressly for the erection of the new Gun Powder Magazines, there were two sales, and two magazines. The Powder Magazines appear clearly on the 1877 map which was mentioned but not imaged in the report. My opinion is that the search here was not extensive enough and the conclusions were drawn prematurely; I say this in light of the evidence. I also learned that Fifth Street was run through the burial ground, and the Northside / 5th Street Viaduct as well. Additionally a walkway leading to Richmond Locomotive was run through it, and later railroad tracks were built on it. There is the gas station that was placed upon it, and the billboard, etc. Each one of those very deliberate actions destroyed the graves of someone's loved ones. I think about how hurt and devastated Kitty's family would have been and also the many others who were affected by those actions taken for another's monetary gain. It truly breaks my heart.

This burial ground is supposed to be a place of eternal rest - a place of honor and memorial, just like at the two burial grounds next to it. The disparity between them is shocking, and quite beyond words. On any given day a descendant of those buried at the Shockoe Hill Cemetery or the Hebrew Cemetery can go and visit the grave of their ancestor which is still to this day lovingly cared for and attended to. That is not true of the African American Community who had enslaved ancestors who died before 1879 in the City of Richmond. The descendants exist not only in Richmond, but all over the country. We the descendant community of that burial ground can only wonder what happened, and what is going to happen next? Would you do what you are proposing to do for the sake of high-speed rail to the Hebrew Cemetery or to Shockoe Hill Cemetery? I assume that the answer would be no. So I have to ask, when is enough, enough? When will our ancestors who were laid to rest at that corner be honored, and left in peace? Have you considered how many true descendants of those who were buried in that burial ground exist? It was the slave burial ground for the city for 49 years and a very active one. And it continued as a very active burial ground for 13 additional years. Not to mention those who were free people of color who would have been buried there as well prior to 1865. There were many thousands of people buried there. That could mean that there are millions of people who descended from those who were buried in that graveyard. But most of them have been robbed of their history. And they have been robbed of that place in which they can pay their respects to the ones that came before them. But that part can be changed, at least on some level.

The burial ground appears to have never been called Potter’s Field, not officially prior to its inclusion on the 1877 Bates Map. Reports of interments for both black persons and white were made by the Superintendent of the Shockoe Hill Burial Ground who kept registers and who made regular reports to the City Council and to the standing committee of the City Council which was called the Shockoe Hill Burying Ground Committee, and much later the Committee on Cemeteries. Occasional references to the Poor House Cemetery or Poor House Hill were not references to a Potter’s Field. The 1869 City Directory refers to the burial ground for colored people as the African Burial Ground and the Shockoe Hill Cemetery as the Poor House Cemetery. This same publication lists John Pearce as the Superintendent of both burying grounds in addition to the Jewish Cemetery. Later reporting in the 1870s appears to be made under the name Shockoe Hill Cemetery with the black cemetery being more specifically referred to as the adjoining ground. On February 21, 1878 The Daily Dispatch reported under the heading “ADDITIONAL BURYING-GROUND NEEDED” 304 colored interments had been made that year. Also mentioned was that it was impossible to make any new interments without disturbing some previous burial due to the overcrowded conditions.

I can not say whether or not any burials were removed to the prison graveyard, though it would seem from the description made that the majority of those burials were prison inmates. I can say that the number of interments made for colored people at the burial ground at 5th and Hospital between 1873 and June of 1879 was 1,808 which I believe exceeded the number of burials at the prison graveyard about 5 times over, not to mention the thousands buried in prior years.

I ask please for a direct response to the letters written by Steve Thompson, Phd of Rivanna Archaeological Services, and history professor Ryan Smith, Phd. The opinions they have expressed, and the concerns and questions which have been raised in their letters mirror my own. I too would like to know the answers.

I continue to have deep concerns for the burial ground at 5th and Hospital Street (1816 Graveyard for Free People of Colour and For Slaves / 1877 Potter’s Field). The reports made indicate that the burial ground is being minimized in terms of its size and its history. I appreciate the response I received from you Kerri and the invitation to visit the site. I don’t believe however that the letter you so kindly sent to me answered my questions or addressed my concerns. I feel it important that these things be specifically addressed in writing. Though at some point I would certainly welcome the opportunity to talk to you. At this time I would not be able to pay the site a visit in person, at least not in the near future as far as I know, as I live too far away. Traveling that distance and enduring the expense, as well as lost time from work - unfortunately it is something that I can not do. If something changes, I hope the invitation will remain open. I thank you for the offer.

I ask that this burial ground be recognized and studied to its fullest extent, its dimensions and history fully explored. I ask please that DHR change its position in regards to the matter of the burial ground and request further testing and exploration.

My goal is not to completely derail and halt your project. I seek only to ensure that the site be treated with dignity and respect. This is an opportunity for all parties to come together to collaborate, increase understanding and formulate a mutually acceptable solution, a better solution to this tragedy. Among other things, I myself have done extensive research in relationship to the burial ground which I believe would be quite helpful. This research is also ongoing.

Your consideration of this matter is deeply appreciated. Thank you.

Yours truly,

Lenora

Lenora McQueen

Circa 1816 “Graveyard for Free People of Color and Slaves” (archaeological site 44HE1203)

1 message

Ellen Chapman <ellen.chapman@gmail.com> Mon, Feb 4, 2019 at 12:16 PM
To: kbarile@dovetailcrg.com, info@dc2rvarail.com
Cc: LENORA MCQUEEN <lenora.m@prodigy.net>, Steve Thompson <sthompson@rivarch.com>, Ana Edwards <ourrosewood@gmail.com>, Derek Miller <miller.derek.r@gmail.com>, "Kirchen, Roger (DHR)" <roger.kirchen@dhr.virginia.gov>

Dear Dr. Barile and Ms. Stock,

I write regarding the potential impacts of the high speed rail project to Richmond’s Graveyard for Free People of Color and Slaves (44HE1209), after communications with Lenora McQueen and Steve Thompson. I conducted my dissertation on Richmond’s archaeology and also coordinate a community organization, RVA Archaeology, focused on archaeological education and advocacy in the city. I am currently engaged in research on the Virginia State Penitentiary project referenced in Calhoun's 2013 VDOT report, and our research has also failed to identify confirmation that Viaduct burials were relocated in the Penitentiary. Regardless of potential burial relocation and the presence of modern utilities, I hope that there is archaeological monitoring planned for the portion of the project along this cemetery.

I offer the following comments on the project:

1) I echo Steve Thompson’s recommendations for additional Phase II before moving forward with construction on the south side of Hospital Street, especially given Richmond’s egregious history of moving black burials for public works projects. If there is a way of becoming more educated regarding the site integrity and the potential for human remains before moving ahead, I think it’s morally important that we do so.

2) As far as any of us are aware, Lenora McQueen is the only person who has identified their status as a descendant of someone buried in Richmond’s Graveyard for Free People of Color and Slaves. Given this, I believe it is appropriate for her to be invited to be listed as a consulting party in the MOA and as a person to contact in the Unanticipated Discoveries Plan in the event that human remains are identified during the project. It might also be helpful to discuss the treatment plans for this site and any plans for archaeological monitoring and avoidance measures.

3) I welcome the offer of a site visit to discuss the question of the burial ground’s integrity and potential exposure by the project, although Ms. McQueen lives in Texas and might prefer responses in writing and over the phone. The RVA Archaeology group would also be interested in setting up a public event in Richmond to discuss the archaeology and history being uncovered as part of the DC-Richmond high speed rail project.

4) I echo Steve’s request for more details regarding the MOA and ask that the document and the list of consulting groups and individuals be released to Lenora if at all possible as a way of continuing this conversation.

Thanks very much, we are interested in the collaborative history research that this project may entail, and look forward to your thoughts.

Best,
Ellen

Hello Steve, Ms. McQueen, and Mr. Smith,

We deeply appreciate your continued comments regarding the circa 1816 cemetery near Hospital Street! Over the past few weeks, the DRPT, project team, and DHR have gone over your materials and your requests to assure that we fully understand your concerns and can address all questions, ensuing a robust dialogue on this area. Additional information on the Section 106 process and all meetings will be coming your way by the close of business today, as requested.

In the meantime, we would like to schedule the on-site meeting so that we can go over DC2RVA project plans directly at the site to facilitate our dialogue. In discussing potential times and dates with the involved parties, we would like to recommend that we meet on site on **Wednesday, February 13 at 3pm**. Alternative dates would be Tuesday, February 12 at 3pm or Thursday, February 14 at 3pm. Please let us know your availability, and I can send a formal calendar invite once a date is confirmed. If these dates and times do not work, we can look at availability during the following week.

Thank you again for all of your information, and we're looking forward to talking to you more on site.
Best,
Kerri

Good morning,

Thank you again for your patience as materials related to the DC2RVA project were culled together. I've created a Dropbox file that addresses the first two questions/requests in Steve Thompson's letter dated January 24, 2019. The files can be found here (https://www.dropbox.com/sh/pfiq48t6hlr6t91/AAAPS3IhuAAxCaO__vJs6xrma?dl=0) and they include:

1) Appendix U from the Draft EIS published in September 2017. This contains all Section 106 coordination documents between commencing the project in November 2014 and August 2017. It is 740 pages.
2) Appendix E from the upcoming Final EIS (in draft form as the document has not been published yet). This contains all Section 106 coordination between August 2017 and January 2019. It is 543 pages.
3) Draft MOA that has been through one round of reviews by FRA, DHR, and DRPT and is now in a second round of edits with these agencies as well as the ACHP and consulting parties. It is 71 pages.

These documents contain all 106 correspondence. Please know that I didn't overload you with materials to lead you on a wild goose chase! :) But the 106 outreach on this project has been long and robust so I wanted to send you what has been done. All of the coordination blends to include the entire corridor and we discussed all areas, including Richmond and the historic properties, in all dialogues with the agencies and vested groups for over four years, so it is a bit hard to tease out materials that only pertain to this cemetery. Hopefully the summary tables in the beginning can narrow down the topic of the correspondence and I am, of course, always available to highlight certain pieces. I've been living and breathing this project for over four years now!

One document that is NOT within this batch is the roster of commitments that is being made in association with the National Environmental Policy Act process. In addition to 106 mitigation, the project has NEPA commitments, some of which revolve around this portion of Richmond. The roster is currently being developed, and your input at our onsite meeting and through your letters is helping to refine this list. I mention this to keep in mind as you review the MOA- there are multiple legislative requirements that will include cultural resource commitments. We're looking forward to discussing these with you.

Beyond your request for these three categories of documents, we are also working on the other points in all letters and emails received on this project. We will have additional overlays, geo data, and descriptions of project impacts when we meet. I think a lot of your questions will be answered at that time, and we are really looking forward to our dialogue!

Again, I am absolutely here to discuss these materials between now and next Wednesday, and much more will be shared on site.

Thanks so much!
Kerri

I look forward to seeing you tomorrow at 3PM for the site visit.

Please note that we do not have permission to enter the privately-owned sections of the site. We do have permission to park on a City of Richmond-owned parcel to the southeast of the site.

Parking Location: SE corner of 7th Street and Hospital Street. Address: 703 Hospital Street See maps below.

Please plan to meet in this parking area a few minutes before 3PM. We can review maps and handouts from that vantage point, and then head out as a group to the Hospital Street sidewalk (east side of street) up to 5th Street.

Our head count is around 20. **Since we will be walking across a busy street and the railroad tracks, I would like to keep the group together as much as possible for safety.** To aid in discussion and to help orient us at the site, we've prepared a timeline with historical and current maps. DRPT will provide hard copies of the timeline at the site tomorrow. We will also have large-scale project plans to review together in the parking area before we start our walk.

Please carpool with colleagues to the extent possible - and call me if you have any last minute questions or change of plans. Thank you! Emily Stock (tel. 804-971-1381)

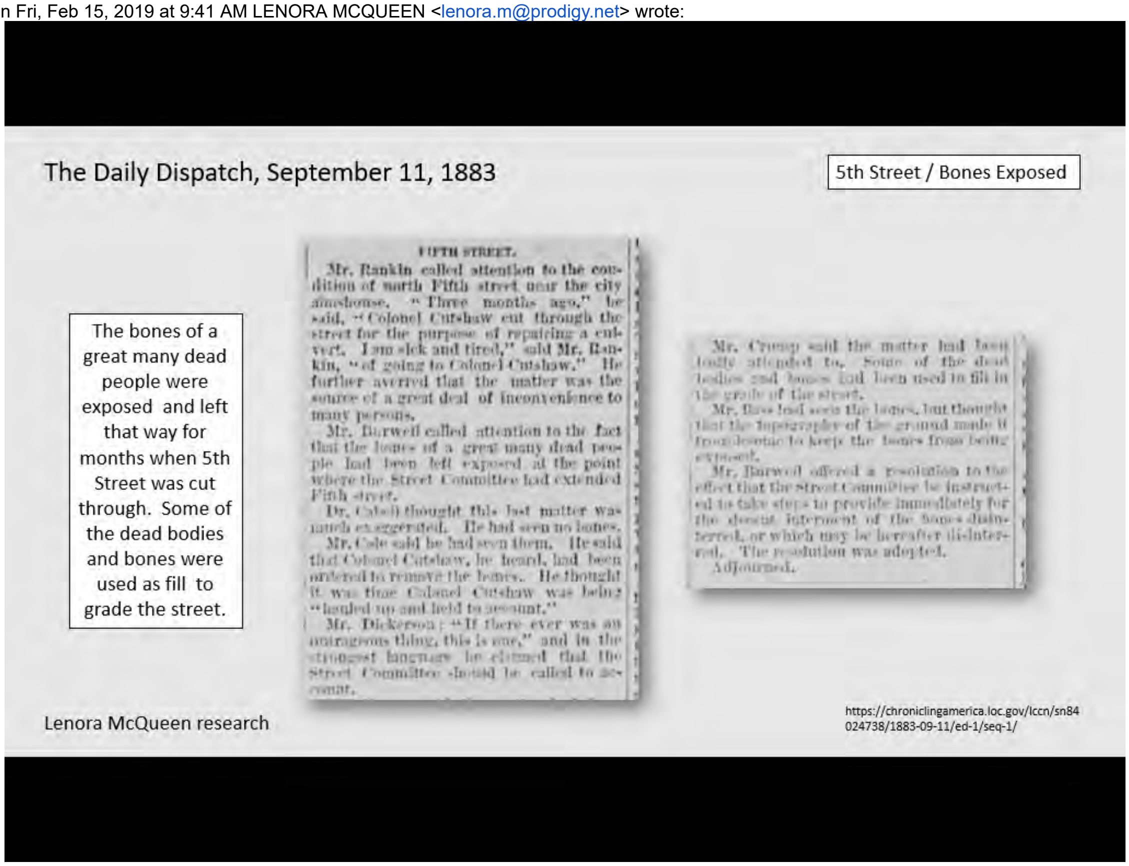
I'm so, so sorry Lenora.

It strikes me that since several of these events were happening prior to 50 years ago, if there is evidence of how the site was damaged, that is itself archaeological information worthy of being recorded so it can be used to explore the actions of the city regarding this cemetery. I would like more information regarding why a no adverse effect determination is being made when the designs are at 10% and in light of more archaeological testing and monitoring being planned at the site. It looks like there is a possibility that these sidewalks and road improvements are going to get constructed or modified on top of bodies and disarticulated human remains, also. That to me seems like an adverse effect.

On Fri, Feb 15, 2019 at 9:41 AM LENORA MCQUEEN <lenora.m@prodigy.net> wrote:



The Daily Dispatch, September 11, 1883

5th Street / Bones Exposed

The bones of a great many dead people were exposed and left that way for months when 5th Street was cut through. Some of the dead bodies and bones were used as fill to grade the street.

FIFTH STREET.

Mr. Rankin called attention to the condition of north Fifth street near the city almshouse. "Three months ago," he said, "Colonel Cutshaw cut through the street for the purpose of repairing a culvert. I am sick and tired," said Mr. Rankin, "of going to Colonel Cutshaw." He further averred that the matter was the source of a great deal of inconvenience to many persons.

Mr. Burwell called attention to the fact that the bones of a great many dead people had been left exposed at the point where the Street Committee had extended Fifth street.

Dr. Cabell thought this last matter was much exaggerated. He had seen no bones.

Mr. Cole said he had seen them. He said that Colonel Cutshaw, he heard, had been ordered to remove the bones. He thought it was time Colonel Cutshaw was being "hauled up and held to account."

Mr. Dickerson: "If there ever was an outrageous thing, this is one," and in the strongest language he claimed that the Street Committee should be called to account.

Mr. Crump said the matter had been badly attended to. Some of the dead bodies and bones had been used to fill in the grade of the street.

Mr. Bass had seen the bones, but thought that the topography of the ground made it troublesome to keep the bones from being exposed.

Mr. Burwell offered a resolution to the effect that the street Committee be instructed to take steps to provide immediately for the decent interment of the bones disinterred, or which may be hereafter disinterred. The resolution was adopted.

Adjourned.

Steve may have something additional to say or add to this. At the moment - I just can't.....

Lenora

On Thursday, February 14, 2019, 4:18:16 PM CST, Stock, Emily <emily.stock@drpt.virginia.gov> wrote:

Thank you for participating in the site visit yesterday. Please see blue text below in response to your questions.

1. The Federal Railroad Administration's (FRA) and the Virginia Department of Historic Resources's (DHR) determination (January 4, 2019) that the project will have no adverse effect upon the Grave Yard site (44HE1203) remains in effect? Yes. After extensive dialogues, review of project plans, and evaluation of comments received from consulting parties and other vested groups, the FRA and DHR have agreed with DRPT's determination that there is no adverse effect to site 44HE1203 associated with the DC2RVA project under Section 106 of the National Historic Preservation Act.
2. How will the commitments outlined in the Recommendations section of the Draft Timeline of Events distributed yesterday be incorporated formally into project planning and the National Environmental Policy Act (NEPA) compliance process?
    1. Will these commitments be included as part of the MOA now being drafted for inclusion in the project's Final Environmental Impact Statement, or as some other component of the FEIS? The commitments will be incorporated into the Final EIS and later the Record of Decision (ROD) as part of the DC2RVA project.

> FRA's signature on the ROD will formally and definitively make the commitments an enforceable part of the DC2RVA project. The commitments are not included in the MOA as the MOA only addresses historic properties that are adversely effected by the undertaking as related to Section 106.
>
>   2. Will there be an opportunity to review the text of these commitments before finalized? The draft text of the commitments were shared with you and other stakeholders on February 12th prior to our site meeting. The commitments will be revised based on data obtained during our on-site meeting and redistributed shortly; we welcome any comments you may have on these refined commitments or other aspects of the DC2RVA project. Once finalized, the commitments will be published with the Final EIS and can be reviewed at that time as well.
>
> 3. Can you provide current understanding of the DC2RVA project schedule?
>   1. When is the Final EIS due to be completed? The Final EIS is currently scheduled to be completed later this Spring or early Summer, pending final review and acceptance by FRA.
>   2. When does the project anticipate entering the "final design and construction phase" (when the site commitments will be implemented), and what are the variables that determine this? DRPT envisions building the overall 123-mile DC2RVA project in increments as funding becomes available. The Commonwealth of Virginia has assigned priority to project segments in Northern Virginia as well as the Long Bridge project across the Potomac River. The improvements in the Richmond area would likely follow completion of the DC2RVA improvements north of Fredericksburg. The schedule for all of these improvements is dependent on funding availability, which is difficult to predict—however, any final design and construction for the Richmond area improvements as part of DC2RVA is likely 10 to 15 years in the future.
>   3. When does the Team anticipate project designs reaching "90 percent completion," and what are the variables that will determine this? Current plans provided in the Final EIS are at a 10 percent (conceptual) stage. Following release of the Final EIS, DRPT will be advancing plans for the Preferred Alternative to a 30 percent level to provide additional clarity on project components and to advance work in the higher priority segments in Northern Virginia. Additional site-specific data would be required to advance the plans beyond 30 percent, including topographic and property surveys, utility surveys, and geotechnical investigations. Richmond area plans will not be advanced into further phases of design until funds become available for final design and construction.

All:

Thanks to all who participated with DRPT at the Graveyard for Free People of Color and Slaves site visit on Feb. 13th. Attached are meeting notes, meeting attendance roster, and revised project commitments as discussed at the site visit. (See project commitment revisions highlighted in yellow.)

Lenora - I hope that these additional materials help to address your concerns. Please note that in addition to archaeological testing, DRPT is committing to develop a landscape analysis of the site, and will concurrently reevaluate its resource boundaries and National Register of Historic Places eligibility through consultation with the DHR using any newly acquired data. DRPT would move forward with these commitments during the final design and construction of the rail improvements in the Richmond area. I would like to discuss these commitments with you and will try to reach you by phone.

Best regards,
Emily Stock

>> Hello Kerri and Emily,
>>
>> Would you please provide the detailed minutes from the February 13th site visit and the proposed commitments to the site? Additionally would you please provide the current definition of site #44HE1203 "The Grave Yard For Free People of Colour and For Slaves" as it is much larger as it was previously being defined in the 2018 report? It seems important to know specifically how the site is currently being viewed. A previous request was made to examine the chain of title histories of adjoining properties as the Grave Yard probably or possibly extended into those properties. Has that been done? If not - is it one of the proposed commitments? Is the site's historical significance in terms of the acts of destruction or partial destruction being considered? These acts are very much an important part of the history of the burial ground and should be a part of its told story especially considering the many thousands of people that were buried there.
>>
>> At this point has there been any reconsideration of the position regarding adverse effect? It seems to me that no matter where construction would be done in the area, the potential to disturb remains exists - whether the remains are intact or scattered.
>>
>> I look forward to hearing from you.

Site 44HE1203/Grave Yard for Free People of Color and Slaves

Cultural Resource Commitments for DC2RVA Rail Project

The following commitments will be included in the Final Environmental Impact Statement (Final EIS) for the Washington, D.C. to Richmond segment of the Southeast High Speed Rail project (the Project) in association with the Grave Yard for Free People of Color and Slaves (archaeological site 44HE1203). The commitments are made to address stipulations set forth in the National Environmental Policy Act of 1969. Each commitment has been agreed to by the Virginia Department of Rail and Public Transportation (DRPT), and will be implemented, as appropriate, in the Project's design and construction phases. The Project will be designed and constructed in increments as funding becomes available; as each Project increment is funded and moves forward through design and construction, the commitments appropriate to that specific Project increment will also be implemented. In the event that the Project is turned over to another sponsor during construction, DRPT will continue to coordinate the following commitments with that sponsor and the appropriate federal, state, and local regulatory and managing agencies.

1) A landscape analysis of site 44HE1203 and surrounding area will be completed to understand the chronology of area development. This landscape analysis will include, among other tasks, archival research, oral histories with local historians and descendants, georeferenced overlays, a cut and fill analysis, and potentially 3D modeling of the data. Data to be gathered includes information on the history and development of the cemetery, post-interment impacts, and comments on the memorialization and interpretation of the site. The landscape analysis will be documented in a report and presented to the Virginia Department of Historic Resources (DHR), DRPT, Virginia Department of Transportation, City of Richmond, Historic Richmond Foundation, Preservation Virginia, and other vested groups interested in the history of this area for their use in future planning. Concurrently, the resource boundaries and National Register of Historic Places eligibility of site 44HE1203 will be reevaluated through consultation with the DHR using the newly acquired data.

2) Once DC2RVA project designs in this area have reached 90 percent completion, archaeological testing will be completed in the revised limits of disturbance in the area of site 44HE1203 to examine the subsurface integrity and composition of these areas and ascertain the potential for intact burials. Should intact shafts or soils be noted, archaeological stripping of overburden may occur to delineate potential interments. If internments are identified, the project design will be re-evaluated and additional measures taken to avoid or minimize potential impacts to the internment area.

3) A Secretary of the Interior (SOI)-qualified archaeologist will be on site during all DC2RVA construction-related ground disturbing activities in this area to assure that no unanticipated/undiscovered archaeological or burial remains are encountered during ground-disturbing construction. In the event that remains are encountered, construction would stop and the DHR will be contacted to evaluate next steps.

APPENDIX E6

CONSULTING PARTY AND PUBLIC MEETING SUMMARIES

D.C. TO RICHMOND SOUTHEAST HIGH SPEED RAIL

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update- NPS Fredericksburg CP Meeting
June 8, 2017; 10:00am

AGENDA & MEETING NOTES

Attendees:

Emily Stock- DRPT
Carey Burch- HDR/Project Team
Kerri Barile- Dovetail/Project Team
Kirsten Talken-Spaulding- NPS Fredericksburg
John Hennessy- NPS Fredericksburg
Eric Mink- NPS Fredericksburg
Greg Mertz- NPS Fredericksburg

1) Introductions (all)

2) General Project Overview (Emily S. and Carey B.)

- Discussion of project goals
- Publication of DEIS
- What is high-speed rail

3) Cultural Resource Studies to Date (Kerri B.)

- Initiation and APE
- Technical studies to date (including different methodologies for bypass and main line)
- Coordination with the DHR to date
- List of historic properties to date

4) Questions and Answers on Resources and Project (all)

- Kirsten Talken-Spaulding asked where grade separations are planned, as the team heard that several may be installed. Carey B. showed them one location where a separation is planned, at Lansdowne Road. There will not be a grade separation at their other areas of concern- Benchmark/Mine Road and Guinea Station. Details of the Lansdowne overpass were discussed.

- Kirsten asked if any bridges in Fredericksburg are closing. Team discussed replacement of Naomi Road bridge and construction of additional bridge across the Rappahannock.

- John Hennessy inquired about the noise and vibration analysis and the potential impacts from increased quantity of train traffic. Areas of concern were Mead's Pyramid, Slaughter Pen Farm, and several buildings in downtown Fredericksburg including the Purina Tower. Carey B. addressed the concerns and said that noise and vibration studies had been conducted and the team will note the areas of concern and follow up on those, especially Mead's Pyramid.

- Related to this, John H. stated that his concerns that increased frequency may have operational impacts on the park and interpretation (noise, people getting to the park, etc.). This includes both passenger trains and CSX trains. Carey B. said that increased freight traffic is discussed in the DEIS under the No Build alternative, which shows that the increase will occur with or without the current project.

- Kirsten and John reiterated their concerns that this project will lead to growth in this area and thus have potential impacts on the park and both Civil War-era and commemorative resources. Emily S. and Carey B. both discussed that there will be additional trains but that the improvements would mean a more fluid system, less backups, quieter trains because of use of sidings, and more. They understood the parks concerns and would continue to monitor the analysis in this area.

- Returning to the topic of Mead's Pyramid, NPS discussed its location on the non-public side of the tracks. The group then discussed potential ways to have the public safely get over the tracks to see the pyramid including a pedestrian bridge or underpass.

- Plans near Slaughter Pen were discussed, and Carey B. went over the design in this area, noting that very minimal changes to the existing track may be required in the existing ROW to lessen a curve.

- Beyond Fredericksburg, NPS had concerns with potential impacts to the Jackson Shrine in Guinea Station. In viewing the plans, Carey B. highlighted that the third rail/track improvements would be made to the opposite side of the tracks from the historic property. The rail would maintain its same grade and actually will use remnant of an old third track in this area to minimize impacts. Kerri B. also noted that the resource had not been recorded with the DHR and that through the DC2RVA efforts, it is now listed as an eligible property.

- One remaining issue that was discussed is the accessibility to this resource if the track modifications required any changes to the roadway. The team said they would follow up on this issue and talk to the roadway engineers to note any changes in this area.

- The final topic revolved around schedule. Kirsten T. asked for a general timeframe for the process and construction. Emily S. stated that the project will go to the DEIS at the end of the year with preliminary engineering occurring next year and the FEIS being published at the end of 2018. Construction is at least two years out from that and is completely contingent on funding.

The meeting ended at 11:00am

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update- National Park Service Richmond CP Meeting
August 14, 2017; 11:00am

AGENDA & MEETING NOTES

Attendees:

Randy Selleck- DRPT
John Morton- HDR/Project Team
Steve Walter- Parsons/Project Team
Kerri Barile- Dovetail/Project Team
Dave Ruth- NPS Richmond
Bob Krick- NPS Richmond

1) Introductions (all)

2) General Project Overview (Randy S. and John M.)
  - Project Goals
  - Location

3) Cultural Resource Studies to Date (Kerri B.)

4) Draft Environmental Impact Statement (Steve W.)
  - Results of Analysis
  - Current Status

5) Next Steps (Randy S. and John M.)
  - Release of DEIS
  - Future Cultural Resource Studies
  - FEIS
  - Public Meetings

6) General Comments and Questions
  - Dave R. asked if Buckingham Branch is still being considered as an option as part of the project. John M. said that it was part of the original alternatives analysis but was not brought forth to the DEIS because of numerous issues.

- Dave R. then asked if station locations had been selected. John M. and Randy S. both described the selection process for stations and where the DEIS alternatives analysis is suggesting stations be located to date.

- Regarding Richmond, Bob K. asked if any notable road changes would be required as part of this work in Richmond. Randy S. and Kerri B. described the differences in the philosophies behind this project and Richmond-to-Raleigh wherein all at-grade crossings were proposed for removal and replaced with overpasses or underpasses. This caused several additional impacts to historic properties. Here, many fewer at-grade crossings are being eliminated thus reducing impacts to historic areas.

- Dave R. asked when the public hearings will be. John M. stated that they would likely be the week of October 14th. Kerri B. said that all consulting parties would get notification of the hearing dates as well as the publication of the DEIS.

- Dave R. and Bob K. said they had no additional comments and that their questions had been answered. They had no notable concerns with the project as planned at this time.

The meeting ended at 11:45am.

DC TO RICHMOND
SOUTHEAST HIGH SPEED RAIL

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update- National Park Service/Northern Virginia and DC
August 29, 2017; 11:00am

AGENDA & MEETING NOTES

Attendees:

Randy Selleck- DRPT
Carey Wilson- HDR/Project Team
Becky Wilk- HDR/Project Team (phone)
Wayne Hyatt- Moffatt Nichol/Project Team
Steve Walter- Parsons/Project Team
Rachael Mangum- Parsons/Project Team
Michelle Fall- Parsons/Project Team (phone)
Kerri Barile- Dovetail/Project Team
Laurel Hammig- NPS National Capital Region
Tammy Stidham- NPS National Capital Region (phone)
Simone Monteleone - NPS GW Parkway (phone)
Brenda Wasler- NPS GW Parkway (phone)
Rick Nau- Kimley Horn
Paul Elman- Kimley Horn (phone)

1) Introductions (all)

2) General Project Overview (Randy)
- Project Goals
- Location

3) Cultural Resource Studies to Date (Kerri)
- Initiation & APE
- Phase I/Reconnaissance Studies
- Preliminary Effects
- DEIS (106 and 4(f))
- Consulting Party Communication

4) Draft Environmental Impact Statement (Steve)

- Results of Analysis
- Current Status

5) Next Steps (Randy and Steve)

- Release of DEIS
- Future Cultural Resource Studies
- FEIS
- Public Meetings

6) Questions and Answers on Resources and Project (all)

- Simone Monteleone asked if the project studies included both the permanent and temporary construction limits. Randy said that they included both.

- Simone then asked if the NPS is a cooperating agency. Randy said they are a participating agency . Kerri also confirmed that multiple branches of the NPS are Section 106 consulting parties.

- Simone asked for a clarification on the publication date of the DEIS. Steve said they believe it will go public on September 8, 2017.

- Laurel Hammig asked for a general description of the temporary impacts. Randy and Wayne described some of the construction access that would need to be required. They clarified that if any utility needed to be moved, this would be a permanent impact.

- Several members asked if the maps could be pulled out and there could be a walk through of the project corridor in Northern Virginia.

- Simone asked if temporary impact areas would be revegetated, if appropriate. The team confirmed they would.

- Simone asked if CSX had been consulted and, if so, if they have any issues with the plans in Northern Virginia. Randy said that yes, the team has been in repeated contact with CSX and, to date, they have no immediate concerns on the plans in this area.

- Laurel brought up the VRE Crystal City station and asked if the team is working with VRE on interconnectivity. Randy, Wayne, and other team members described the continual communication with VRE to assure that all concerns are addressed. Communication includes biweekly meetings, calls, etc.

- Laurel asked about the general timing of this project (construction), as well as how this project fits within the Atlantic Gateway study. Randy and Wayne provided data on both topics, including a potential build year of 2025 (pending funding). Long Bridge was also discussed in this answer to described the two projects and how they are working together at the intersection point. DDOT is doing the environmental study for Long Bridge, and Virginia will be funding final design.

- Rick Nau asked if train traffic will be maintained during construction. Wayne stated that yes it will.

- The participants asked if the DEIS will be available electronically. Steve said yes and that it will all be posted on the project webpage. Kerri said she would let all consulting parties know when it is posted so they can download the document.

The meeting ended at 12:00pm.

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update- Ashland Area Consulting Parties
October 11, 2017; 1:00pm

AGENDA & MEETING NOTES

Attendees:

Randy Selleck- DRPT
John Morton- HDR/Project Team
Stephen Walter- Parsons/Project Team
Kerri Barile- Dovetail/Project Team
Claudia Cheely- Hanover Conty
Josh Farrar- Town of Ashland
Garett Pryor- Town of Ashland
Rosanne Shalf- Ashland Museum
Betsy Hodges- Ashland Museum
John Hodges- Ashland Museum

1) Introductions (all)

2) General Project Overview (Randy S.)

- Discussion of project goals
- Publication of DEIS
- Update on public hearings
- Discussion of FEIS briefly

3) Cultural Resource Studies to Date (Kerri B.)

- Initiation and APE
- Technical studies to date (including different methodologies for bypass and main line)
- Coordination with the DHR to date
- Comparison of DC2RVA project to recent DHR cost share study results (conducted by Commonwealth)
- Information presented in DEIS
- General contents of the upcoming FEIS cultural section (recomm pref alt)

4) Questions and Answers on Resources and Project (all)

- John Morton with the team clarified that the DEIS does not include the tunnel option through Ashland so all documents and materials presented here are absent that alternative as it was developed by the Citizens Advisory Committee (CAC), brought together to discuss Ashland. It was not one of the team's original alternatives.

- Garet Pryor with Ashland commented on the parallel findings of the Commonwealth cost share survey and the DC2RVA project results. He also had a question on how secondary impacts were evaluated. Team discussed the APE and how it encompasses roads, etc. to assure that secondary impacts and visual impacts are taken into consideration.

- Rosie Shalf presented historical data on several resources described in the technical reports. She believes 706 S. Center Street is eligible for the NRHP (both DC2RVA and Commonwealth cost share recommended it was not eligible and DHR concurred). Similar resources included 1014 Early Street (corner of Early and Center), 407 Myrtle (corner of Myrtle and Railroad Ave), and 904 S. Center Street. She believes all three are eligible. DC2RVA/Commonwealth/DHR disagree. Discussed reasonings for findings and team collected information on all resources.

- John Farrar asked if all alternatives under consideration (including the tunnel) would be in the FEIS in some fashion. Team said yes, as well as all comments on the DEIS.

- Garet Pryor asked how effect is determined. Team quoted language from Section 106 and described examples. They also discussed the difference between a resource that is individually eligible and one that is not individually eligible but contributes to an eligible historic district.

- Rosie Shalf asked for clarification on the western bypass option. Data on the design was presented by the team. She then asked if fences would be required downtown along the rail line. John Morton clarified that a fence could be needed near the station but it all depending on the selected alternative and design. As such, the need for a fence is unknown right now.

- Josh Farrar asked if noise and vibration were taken into consideration when determining effect. The team stated that yes, they were, as well as both permanent and temporary impacts.

- Betsy Hodges inquired on the installation of a third rail in Ashland if this alternative is selected. Would this constitute an adverse effect? The team replied that it could be an adverse effect depending on final design. For example, if secondary changes were made (alternations to historic road patters, moving sidewalks, notable vegetation changes), those could be an adverse effect depending on the eligibility criteria of the resource.

- Rosie Shalf asked about property values and if there is a history that values decrease in these situations. The team, as well as Garet Pryor, said no.

- The team suggested looking at a few cross-roads towns along the Richmond to Raleigh segment as comparisons, including La Cross, McKinney, and Alberta.

- The team wrapped up with a brief discussion of the next steps including future technical studies, effect determination, MOA, and additional consulting party meetings.

The meeting ended at 2:30pm

DC TO RICHMOND
SOUTHEAST HIGH SPEED RAIL

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update- Northern Virginia/DC Area Consulting Parties
October 20, 2017; 1:00pm

AGENDA & MEETING NOTES

Attendees:

Randy Selleck- DRPT
Stephen Walter- Parsons/Project Team
Kerri Barile- Dovetail/Project Team
Eleanor Breen- City of Alexandria/Alexandria Archaeology
Al Cox- City of Alexandria/Alexandria Archaeology
Catherine Miliaris- - City of Alexandria/Dept of Planning
Ben Scolack- City of Alexandria/Dept of Planning
Rebeccah Ballo- Arlington County Dept of Planning
Sharee Williamson- National Trust for Historic Preservation

1) Introductions (all)

2) General Project Overview (Randy S.)
- Project Goals
- Location
- DEIS to FEIS process

3) Draft Environmental Impact Statement (Steve W.)
- Results of Analysis
- Comment Deadline

4) Cultural Resource Studies to Date (Kerri B.)
- Agency coordination
- Phase I survey to date
- Commencing Phase II architectural studies
- Info as presented in the DEIS
- Preliminary effect dialogues
- Consulting party meetings

5) Next Steps (Randy S., Steve W., and Kerri B.)

- Future Cultural Resource Studies
- FEIS

6) Questions and Answers (all)

- Sharee W. asked for the defined APE. Kerri B. presented this data as approved by the DHR. She also discussed that the original survey was conducted on the APE based on the centerline of the alternatives as presented in the DEIS and additional studies are ongoing in areas where the LOD now extends beyond the original study area and in places where additional data was needed in areas where the APE was expanded due to cultural resource concerns. Steve W. reiterated this fact.

- Catherine M. asked if the team had decided where the new rail would be in relation to the existing tracks. Randy S. walked the attendees through a set of maps showing the alignment from Long Bridge to Fairfax County.

- Eleanor B. asked if any areas requiring modifications, such as new walls, would be the subject of filling or removal of soils. Steve W. stated that any areas of modifications in Northern Virginia would be raising the ground level to meet the raised rail, thus filling would occur as needed but there were no plans to remove any intact soils.

- Catherine M. asked how tall retaining walls would be. She inquired whether or not they would resemble sound walls. Randy S. and Steve W. confirmed that they would be short, knee-tall retaining walls for ballast but no taller.

- Rebeccah B. asked if the National Park Service had been contacted. Kerri B. discussed the eight branches of the NPS that are consulting parties to the project and ongoing dialogues with each group, including a basic summary of comments received to date.

- Rebeccah B. then asked if the project would have a Programmatic Agreement or a Memorandum of Agreement? Randy S. and Kerri B. described the PA that was created for the whole Southeast High Speed Rail corridor for cultural resources and that this is one of three segments that falls under the PA. As such, an MOA will be produced for this segment rather than a PA.

- Rebeccah B. mentioned that National Airport is planning to do several projects that require environmental compliance. She asked about the recordation of buildings along the tracks and in the APE to not "double up" on efforts. Kerri B. said she would look into the studies in this location and coordinate with Rebeccah on this issue.

- Al C. asked if any of the bridges in the Alexandria/Arlington area would be rebuilt as part of the project. Randy S. and Steve W. said that only the bridge over Backlick Road needed to be rebuilt. The rest can use existing structures.

- Catherine M. asked for a clarification on work conducted in the Rosemont Historic District. Kerri B. will follow up with her on this.

- Sharee W. asked what resources would be adversely effected by the project based on the preliminary analysis. Kerri B. and Steve W. provided data that is presented in the DEIS. They also stated that studies are ongoing and final effect determinations will be presented in the FEIS based on extensive coordination with the Virginia SHPO and consulting parties, among others.

- Sharee W. then asked if we could examine the Shockoe area of Richmond, and a map inspection was completed by the attendees. In addition, Kerri B. presented overlays of several historic Richmond maps and plans for Memorial Park in Shockoe. A discussion on project plans in this area ensued, including potential noise impacts from the trains.

- Sharee W. then asked if a 4(f) analysis is part of the DEIS. Steve W. said it was.

The meeting concluded at 2:00pm.

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update- ABPP/CWT Consulting Party Meeting (w ACHP)
October 24, 2017; 10:00am

AGENDA & MEETING NOTES

Attendees:

John Winkle- FRA
Randy Selleck- DRPT
Kerri Barile- Dovetail/Project Team
Sarah Stokely- Advisory Council on Historic Preservation
Kristen McMasters- American Battlefield Protection Program (ABPP)
Meredith Gorres- ABPP
Eleanor Cox- ABPP
Mark Coombs- Civil War Trust (CWT)
Adam Gillenwater- CWT

1) Introductions (all)

2) General Project Overview (John and Randy)
- Larger SEHSR Project Overview
- DC2RVA Project Goals
- Current Status of DEIS
- Update on public hearings
- Discussion of FEIS briefly

3) Cultural Resource Studies to Date (Kerri)
- Initiation & APE
- Phase I/Reconnaissance Studies
- Preliminary Effects
- DEIS (106 and 4(f))
- Consulting Party Communication

4) Summary of Next Steps (Randy and Kerri)
- Continue Cultural Resource Studies
- Acquire Final Effect Determination

- ACHP Notification of Adverse Effect
- MOA Production
- FEIS
- Continued Consulting Party Communication

5) Questions and Answers on Resources and Project (all)

- Kristen McMasters asked if the ABPP was involved in the Richmond to Raleigh segment of the SEHSR project. John and Kerri confirmed that they were and offered to send documentation of their participation.

- Kristen asked for a definition of "high speed", and Randy and John provided this to the group.

- Kristen stated that KOKOA analysis (Key Terrain, Observation and Fields of Fire, Cover and Concealment, Obstacles, Avenues of Approach) is often fruitful when examining battlefields as it reveals information on not only fighting but also areas used for visual observation, preparation, travel, etc. She stated that KOKOA analysis along the rail is a must for this project.

- Kristen also asked what boundaries we were using for battlefields. Kerri replied that the DHR has adopted the ABPP recommended boundaries (versus the older core and study area model), and those are being used in the project.

- Eleanor Cox asked what an APE is. Kerri first provided info using details from Section 106 of the National Historic Preservation Act of 1966 on the general definition of APE and following with additional information on the DC2RVA APE.

- Kristen asked if the impacts of additional train traffic as well as associated noise and vibration were being taken into consideration both on cultural resources and along the corridor in general. Randy discussed the environmental studies that had been conducted, including noise and vibration, along the route. Kerri mentioned dialogues that the team had with the Fredericksburg NPS to hear their concerns on this same issue.

- Kristen asked if there would be any new maintenance facilities along the line? Randy said no.

- The ABPP requested that they receive updated shapefiles showing the recommended preferred alternative so they can compare them to their records on battlefields in the project area. The other participants requested the same data. The team committed to disseminating this material.

- Meredith Gorres asked about Cockpit Point Battlefield, stating that it is not on our list of historic properties and wondering why. Kerri explained that the battlefield is in what was originally called Area 5 and now part of Area 2—the segment between Arkendale and Powell's Creek that was part of a different project several years ago. The work was coordinated with the DHR at that time. The current project will not involve any modifications in this segment and thus the APE does not extend over this area. For this reason, Cockpit Point Battlefield is not listed as a historic property in the APE. Kerri said she would triple check this, though, and let the group know of the findings. (Note: After examining this again after the meeting, this info proved correct.)

- Mark Coombs asked what the goal is in terms of train schedule. Randy said the goal is to increase the Amtrak round trips in this corridor to nine. The exact time of these trips has not yet been determined. A discussion ensued on speed restrictions and station stops. Information was also shared regarding the difference between passenger and freight schedules.

- Kristen asked about plans in Ashland. Randy discussed the alternatives under consideration in the DEIS as well as the Citizens Advisory Commission (CAC) and their recommendation of the "3-2-3" where a third track would not be built in downtown Ashalnd. Sarah Stokes asked which alternative is being supported, and Randy and John discussed the outcome of the DEIS and CAC and where the decision may go. They reiterated that they were waiting on the Commonwealth Transportation Board to give their recommendations before moving forward.

- Sarah also asked about plans at Main Street Station. Randy described proposed service in this area, and Kerri followed with a discussion of recorded resources. Information on avoidance to historic properties was discussed.

The meeting ended at 12:15pm.

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update- Prince William to Caroline Area Consulting Party Meeting

October 27, 2017; 10:00am

AGENDA & MEETING NOTES

Attendees:

John Winkle- FRA
Randy Selleck- DRPT
Carey Burch- HDR/Project Team
Kerri Barile- Dovetail/Project Team
Justin Patton- Prince William County
Craig Pennington- Caroline County
Erik Nelson- City of Fredericksburg
Kate Schwartz- City of Fredericksburg
Peter Kolakowski – Central Virginia Battlefield Trust
Ed Santner- Historic Fredericksburg Foundation, Inc.

1) Introductions

2) General Project Overview (Randy, John, and Carey)

- Summary of Larger SEHSR Project
- Project Goals
- Publication of DEIS
- Update on Public Hearings
- Discussion of FEIS briefly

3) Cultural Resource Studies to Date (Kerri and Carey)

- Initiation & APE
- Phase I/Reconnaissance Studies
- Preliminary Effects
- DEIS (106 and 4(f))
- Consulting Party Communication
- Detailed Review of Maps Showing Plans in Fredericksburg

4) Next Steps (Randy and John)

- Continue Cultural Resource Studies
- Acquire Final Effect Determination
- ACHP Notification of Adverse Effect (if applicable)
- MOA Production
- FEIS
- Continued Consulting Party Communication

5) Questions and Answers on Resources and Project (all)

- Erik Nelson asked if 106 must be completed before the Record of Decision (ROD) was issued. John replied yes. It is ok to not have 106 completed prior to the FEIS, though.

- Erik then asked about the proposed parking deck and whether or not the team has discussed it with the VRE, as VRE is planning their own parking deck in Fredericksburg. Carey said that yes, discussions with VRE are ongoing and they are aware of the plans.

- Erik asked if placing the station on the south side of the tracks (near the Janney Marshall building) is an option. Randy and Carey said they looked in several places as part of the DEIS and alternatives considerations but that the preferred location that would aid in operations is North of the tracks between Caroline and Princess Anne.

- Ed Santner asked who will control the design of the parking deck. Carey discussed the purpose and need of the deck and that the size/arrangement would be worked out with multiple groups including FRA, DRPT, VRE, City of Fredericksburg, etc. Kerri mentioned that the deck is located in the historic district, so ARB review would also be part of the process. Also, as stated in the DEIS, the construction of the deck would be an adverse effect to the Fredericksburg Historic District, and a condition in the MOA to mitigate the adverse effects will likely include design review by the DHR.

- Justin Patton asked if the project's adverse effects would be stipulated in a PA or an MOA. John described the larger SEHSR process PA, and he and Kerri then described the MOA that will be part of the DC2RVA project.

- Craig Pennignton said there weren't too many concerns from a cultural resource standpoint in Caroline County. A discussion on the crossroads community of Milford ensued so he could confirm plans. There are some discussions for area improvements there.

- Justin mentioned that the County is working on a small area plan for a section located in North Woodbridge and the team may want to look at this. He also asked about connectivity between this project and the new VRE station that is being constructed. The team said that they are working with VRE to assure seamless connectivity.

- Justin then brought up the houses along Railroad Avenue. They are on the County's historical register. Kerri said that the DHR found them to be not individually eligible but that specific attention is being paid to these resources to assure that they are taken into consideration during design. Carey discussed specific concerns of area residents on accessibility for these houses and assured that this issue is being addressed in the design plans.

- Justin stated that the County does not have concerns regarding archaeological resources in the northern portion of the project area located in the county. He did ask if the project is evaluating noise and vibration in this area, though, as it is very residential. Carey and Randy confirmed that noise and vibration studies have been completed, and the results can be found in the DEIS.

- Justin then mentioned concerns about the viewshed looking from Rippon Lodge to the Neabsco Creek Bridge. This vista was sketched by Benjamin Latrobe in the early-nineteenth century and it is an important viewshed. He asked if improvements to the bridge would be on the west (side closest to Rippon Lodge) or east (side away from the Lodge). Carey confirmed that they will be done on the west. Justin stated his concerns with modifications to the viewshed. Kerri said she would assure that Rippon Lodge is included in the architectural APE and that the team would document the vista looking down Neabsco Creek to evaluate effect.

- Lastly Justin asked about Cockpit Point Battlefield. He first wanted to know why it wasn't on the list of historic properties in the APE. Kerri explained that the battlefield is in what was originally called Area 5 and now part of Area 2—the segment between Arkendale and Powell's Creek that was part of a different project several years ago. The work was coordinated with the DHR at that time. The current project will not involve any modifications in this segment and thus the APE does not extend over this area. For this reason, Cockpit Point Battlefield is not listed as a historic property in the APE. Kerri said she would triple check this, though, and let the group know of the findings. (Note: After examining this again after the meeting, this info proved correct.) As a follow up, Justin asked about access to the east side of the rail leading to a small County park. Carey and Randy stated that no modifications to the existing pedestrian access are planned as part of this project.

- Erik stated that future plans include making Lansdowne Road a four-lane corridor. He wanted to make sure the team is aware of this and asked if an overpass is scheduled for this spot. The team confirmed that it is.

- Kate Schwartz asked if she could examine a zoomed-in view of the plans in the downtown Fredericksburg historic district. Maps were shown and inspected.

- Ed inquired on the existing superstructure in downtown Fredericksburg, noting that it has evidence of either structural failure or cosmetic decomposition. He asked if the superstructure will be replaced as part of this project. Randy and Carey stated that the majority of the superstructure will be retained and repaired. John W. pointed out that it is really up to CSX to provide data on the condition of the superstructure since it is their property, and CSX has stated that this area is in good repair. John said he will inquire on the current status with CSX.

- Related to this, Pete Kolakowski asked how often structures are inspected. John said that all safety is handled by the owner of the rail tracks, in this case CSX. They submit plans to FRA for review. They are also required to submit bridge safety data.

The meeting concluded at 11:30am.

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update- Richmond Area Consulting Party Meeting
October 30, 2017; 10:00am

AGENDA & MEETING NOTES

Attendees:

Emily Stock- DRPT
Randy Selleck- DRPT
John Morton- HDR/Project Team
Carey Burch- HDR/Project Team
Karen Harrington- HDR/Project Team
Kerri Barile- Dovetail/Project Team
Kimberly Chen- City of Richmond
Cyane Crump- Historic Richmond
Danielle Worthing- Historic Richmond

1) Introductions (all)

2) General Project Overview (Emily and Randy)
- Project Goals
- Environmental Process
- Current Status of DEIS

3) Cultural Resource Studies to Date (Kerri)
- Initiation & APE
- Phase I/Reconnaissance Studies
- Preliminary Effects
- DEIS (106 and 4(f))
- Consulting Party Communication

4) Next Steps (Emily and Kerri)
- Continue Cultural Resource Studies
- Acquire Final Effect Determination
- ACHP Notification of Adverse Effect (if applicable)

- MOA Production
- FEIS
- Continued Consulting Party Communication

5) Questions and Answers on Resources and Project (all)

- Cyane Crump asked about the interconnection between this project and Long Bridge. She confirmed that, now, all trains that o on to Newport News/Hampton go through Main Street Station. Even with the current train schedule, would improvements to the S-line be needed regardless? Emily answered that yes, improvements are needed regardless of the DC2RVA project. Emily and Carey then described a similar issue (to Long Bridge) that is located across the James River near the I-95 crossing.

- Daniel Worthing asked for a description of the new time table for travel between Richmond (Main Street Station) and Staples Mill. Emily stated that the time right now is between 20 and 40 minutes depending on time of day, traffic, and conditions. The DC2RVA project will reduce this to 10 to 15 minutes with increased reliability.

- Cyane said she has read the DEIS and information presented in the paper. Based on her review, she said that it appears that if only one station is used, Boulevard is the best option. Emily said that her analysis of the data is generally correct, but that improvements would be needed regardless of the selection of one or two stations. Kerri brought up the quantity of impacts if Boulevard was chosen from a historic properties standpoint to put the design in a 106 context.

- The group asked to pull out the big maps and go over the corridor from Staples Mill to the south.

- Cyane and Danielle brought up the historic warehouse complex near the proposed Hospital Wye (DHR #111-6658). A cornerstone dates the original portion of the building to 1908. They asked that we take another look at this area from both an archaeological (potential rail roundhouse) and architectural (historic building) perspective. They said that the overpass proposed here would have an adverse effect on this property. Kerri said that the resource was examined during the original architectural reconnaissance in 2016 but that she would assure that it is revisited to look for both above- and below-ground resources given the new plans and potential impacts.

- Related to this, Cyane asked if there is another option for a turn around nearby. Carey and Randy said there isn't one close by but that the team would take a look at the general area for other options.

- Danielle asked if the alternatives described in our meeting were in the DEIS and available for viewing on the webpage. Karen said yes, they are in Appendix H.

- Danielle mentioned that the area south of the James only has one track and asked if this would remain the case. Carey explained that the project will include putting back a second track that was there historically.

- Danielle and Cyane asked about potential impacts to Virginia Union Industrial Hall. Kerri said she believes it is outside of the project APE but will confirm.

- Danielle asked who would pay for a new station if one is needed. Similarly, who would approve the design. Emily stated that the funds would be a combination of local, state, and federal and the design would be determined based on a number of involved parties. It depends on the location and purpose of the new station.

- Cyane questioned if the A-line would be used for freight. Emily and Carey replied in the affirmative and added that the autotrain would also use that line.

- In an examination of changes at Main Street Station, Cyane, said she had concerns of the construction of a new parking deck on the Loving Building. Carey stated that the location shown on the plans is just an estimate and the team and agency will be working closely with the City and all other concerned parties on the details once the time arrives. Emily reiterated that what is shown on the plans at Main Street Station is a maximum square footage needed, and the size will likely be reduced in general as well. Kerri brought up that the Loving Building is a contributing element to the Shockoe Valley and Tobacco Row Historic District so the team is aware of its historical significance as well.

- The overlays created by the team showing the project plans and the proposed Memorial Park in this area were then shown to the group and discussed. Cyane commented on the channelization of Shockoe Creek and the impacts of the original rail construction on this area.

- Kim Chen mentioned that the City is planning interchange modifications at 18th and Broad. She asked if the team had been in contact with the City about these plans. The team stated they are aware of the concept and would follow up to get additional details.

- Cyane asked about potential impacts to the canals along the James. Carey stated that the new rail would be placed on existing viaducts from Main Street Station to the area south of the James on the south side of the flood wall. As such, no new structures or supports are needed.

- Plans south of the James were examined in detail, and it was discussed that the current DC2RVA plans are narrower than the previous Richmond to Raleigh plans as there are no planned new overpasses in this area. This minimizes the footprint.

- Kim asked if cultural resource studies are ongoing. Kerri said they are and include intensive-level architectural studies and additional Phase I-level architectural and archaeological surveys in areas that have not yet been studied. She said that another round of consulting party meetings will occur in the summer of 2018 once these studies have been completed.

- Cyane asked when a preferred alternative would be determined. Emily presented details on timing of the next steps.

- Cyane then asked what happens if the CTB and/or FRA do not agree with the preferred alternative. Emily discussed the potential scenarios, including making piecemeal improvements.

The meeting ended at 11:30am.

Thank you for the consultation invitation. At this point in time the Pamunkey Indian Tribe is not aware of any site of cultural or religious significance that would be affected by the project. We do ask to be notified in the event of inadvertent discovery.

Subject: DC2RVA Project Consulting Parties Meeting Invitation Letter

Chief Gray –

Attached is a copy of a letter from the Federal Railroad Administration inviting the Pamunkey Tribe to participate in a Section 106 Consulting Party meeting for the DC to Richmond Southeast High Speed Rail Tier II Environmental Impact Statement. A hard copy will follow.

If you have any questions, please let me know. You can reach me at 202-493-6067 or John.Winkle@dot.gov.

Thank you,
John Winkle

Federal Railroad Administration

Project Update Call- Town of Ashland and Ashland Museum
June 18, 2018; 11:00am

MEETING NOTES

Attendees (all via telephone):

Carey Burch- HDR/Project Team
Stephen Walter- Parsons/Project Team
Kerri Barile- Dovetail/Project Team
Nora Amos- Town of Ashland
Rosanne Shalf- Ashland Museum
Betsy Hodges- Ashland Museum

The Town of Ashland and Ashland Museum, both consulting parties for the DC2RVA project, requested a conference call prior to the three FEIS consulting party meetings to help address preliminary questions on process and resource eligibility.

Rosie Shalf stated that she had reviewed the technical reports that were submitted to the consulting parties on May 15. She noted that Berkleytown Historic District was in one of the intensive reports but she asked if resources that were NOT included in the five technical reports had been dropped from the consideration list.

- Kerri Barile replied that the five technical reports that were sent in May are in addition to the 17 reports sent to the consulting parties in the summer of 2017. Slight modifications were made to the limits of disturbance due to the selection of a preferred alternative, so the new five reports present the results of studies on newly added areas.

Betsy Hodges confirmed that the properties downtown are still on the list of resources that are being considered during the project.

- Kerri confirmed that they are. She did clarify that one Ashland area resource- Montevideo- had been removed as it was along the bypass which is not part of the preferred alternative.
- Steve Walter discussed the preferred alternative in this area, including the 3-2-3 concept and reiterate that the resources downtown are still along the preferred alternative so they stayed in.
- Betsy and Rosie asked for clarification- if no work is required downtown (staying two tracks), why is it part of the preferred alternative?

- Steve and Carey Burch discussed the current plans. While a third rail is not being added, small safety improvements such as new bars or crosslights may be needed. There also may be additional trains through this area so it is still part of the preferred alternative.

- Rosie asked how streetscapes and vegetation can be included as character-defining features for the historic district in the future.
    - Kerri stated that she would augment the district description in the FEIS but that the main place to make this change at the larger level is to include it in the NRHP nomination amendment that the town is already planning to do. This would assure that the concept is in future coordination.
    - Rosie asked if there are examples to follow
    - Kerri suggested talking to Marc Wagner at the DHR, their rep, to get his thoughts on examples as he knows them quite well and will be helping them on language anyway.

- Rosie commented on the Museum's reply letter on the technical reports from 2017. She asked for a follow-up on their comments stating that several additional resources should be eligible.
    - Kerri noted that this was discussed during the October 11, 2017 consulting party meeting. The team compared the Museum's list to the DC2RVA study and the Commonwealth Heritage Group's survey of the district done last summer at the behest of the Town. Both the DC2RVA team and Commonwealth agreed that the resources on the Museum's list were not individually eligible. The results of the Museum's concern and the comparative data was brought to the DHR for their re-evaluation. The DHR confirmed that none of the resources are individually eligible.
    - Rosie would still like a reply from Commonwealth.
    - Kerri provided the name of the individual at the DHR who is the liaison on the Commonwealth/Town project and suggested calling him.

- Rosie and Nora asked if the 106 process would be revisited if any additional properties were determined to be eligible (such as those she mentions above).
    - Steve said it would be reopened if the project changes or if the local context is modified to require reevalation.
    - Carey also mentioned that the process can be reopened if extensive time passes. This would be a revisit to historic properties but it may not result in a revised environmental document.
    - Rosie confirmed that properties that are determined eligible after this current study can still be taken into consideration.
    - Steve and Carey said yes. A note goes in the file that something has been determined to be eligible and project effects are revisited prior to construction, among other tasks.

The call ended at 11:30am

Richmond, VA 23219

Project Update & Effect Discussion with Consulting Parties

Thursday, June 21, 1:00pm-3:00pm

DC2RVA project office. 801 E. Main Street, Suite 1000, Richmond

AGENDA & MEETING NOTES

Attendees:

Emily Stock- DRPT
Randy Selleck- DRPT
John Winkle- FRA
Mike Estes- Project Team
Carey Burch- Project Team
Karen Harrington- Project Team
Wayne Hyatt- Project Team
Kerri Barile- Project Team
Nora Amos- Town of Ashland
Betsy Hodges- Ashland Museum
Mark Coombs- Civil War Trust
Cyane Crump- Historic Richmond Foundation
Danielle Worthing- Historic Richmond Foundation
Lisa Bergstrom- Preservation Virginia
Claudia Cheely- Hanover County

1) Introductions (all)

2) General Project Overview and Current Status (Emily/Randy S.)

3) Cultural Resource Studies (Kerri B.)
- Pre-2018 Work
- 2018 Technical Studies
- DHR Replies on Eligibility

4) Project Effect (Kerri B.)
- List of Historic Properties
- DHR Effect Determinations
- MOA

5) Summary of FEIS and Remaining NEPA Process (Steve W. and Carey B.)

6) Questions and Answers (all)

- Danielle Worthing asked about the Ranks Biotech building and if it is in the Limits of Disturbance and eligible. Kerri Barile said it is in the LOD and was just recorded in the spring. The team reevaluted the resource for the third time (once prior to this project and twice during DC2RVA) and the DHR stated that the resource continues to be not eligible for the National Register of Historic Places (NRHP).

- Danielle Worthing asked about two additional resources- Mason's Hall and a Cemetery for Free Blacks and Slaves. Kerri Barile stated that Mason's Hall has been added to the list of historic properties based on Historic Richmond's request. The cemetery was recorded by the team in the spring of 2018 and the DHR stated that the portion of the resource in the LOD does not contribute to its eligibility. Regardless, the team has worked carefully to avoid the cemetery, and Kerri shared an overlay showing the original plans and modified plans with the smaller footprint in this area. Wayne Hyatt shared details on how the impacts were avoided from an engineering standpoint.

- Danielle Worthing then asked about other resources in Shockoe, particularly those related to the slave trade. Kerri Barile shared historic overlays of the area showing the evolution of the development and project plans, including details on minimization efforts to limit project effects. Emily Stock described the ongoing consultation regarding the proposed Memorial Park. Wayne Hyatt followed up with additional data on engineering minimization as well as details that the parking deck will likely go away (as shown in the DEIS).

- Cyane Crump asked if changes would extend south of Main Street Station and Wayne Hyatt stated that, yes, changes would be made but everything is on an existing viaduct. There will be no new visual elements.

- Cyane Crump asked a follow-up question regarding the parking deck's removal. Where will parking go? And has the City chimed in on this? Carey Burch described the existing deck to the west and ongoing conversations with the City on this issue.

- Danielle Worthing asked about the Barton Heights area north of Shockoe. Specifically, she wanted data on a proposed road in this area. Wayne Hyatt stated that the existing roads are remaining and there wouldn't be a new overpass but that safety improvements are being made such as new cross gates. He also described an extension of James Street that the City requested and an associated pedestrian path. The latter may need to be elevated over the tracks but have not made a decision on this yet. Cyane Crump confirmed it would just be pedestrians and not cars. Wayne said yes.

- Cyane Crump asked for a synthesis of what has been changed since last time (fall 2017). Wayne Hyatt said the proposed yard and wye near Hospital Street has been removed and moved to the south, the number of tracks is being maintained. Cyane asked if this would cost more in the long run, and Wayne stated it was an offset cost.

- Mark Coombs first commended the openness of the communication and thanked the project team for their transparency and excellent communication all around. He followed up by asking for the project's definitions of Adverse, No Adverse, and No Effect. Kerri Barile replied with the definitions. He also asked if there are any changes in the quantity of battle-related resources or changes to impacts. Kerri described the changes at Jackson's Earthworks and how the LOD has expanded so the resource was resurveyed. There is now an adverse effect. No other changes have been made.

- Mark Coombs asked if impacts at Slaughter Pen will still be away from the resource, and Wayne Hyatt confirmed that this is still the case.

- Mark Coombs asked about consultation with the National Park Service. Kerri Barile described all of the meetings and calls.

- Nora Amos asked about impacts to Berkleytown HD and what mitigation would be performed. Kerri Barile gave a few examples and said they were looking to consulting parties for input. Kerri said she will send around the Richmond to Raleigh MOA as inspiration for ideas.

- Cyane Crump asked about additional impacts to Ashland. Carey Burch described the latest plans related to the preferred alternative.

- Nora Amos asked how long the studies are good for. Kerri Barile stated that eligibility is good for five years. Emily Stock followed up that the FEIS will be reviewed every few years to see if there are substantial changes to the environment.

- Betsy Hodges asked if there would be modifications to the trees in Ashland. The team said no.

- Lisa Bergstrom arrived a bit late and asked for a general update on the preferred alternative in Ashland and Shockoe. The team provided the data.

- Claudia Cheely asked about changes in Doswell. Wayne Hyatt described the plans including efforts to minimize impacts (weighing new track to west or east). Moving the tower is the least impacts. Kerri Barile described the dialogues with the DHR on this issue and effects. Claudia then asked how far the tower will be moved, and Wayne stated 140-150 feet.

- As a follow up to the dialogue on Shockoe, Emily Stock then described the efforts to reach out to various interested parties in the fall of 2017 and into 2018. She also discussed the ULI project and ongoing consultation efforts.

- Cyane Crump asked if noise and vibration studies have occurred with a specific concern regarding Mason Hall. Carey Burch provided data on the study and that ther will be no changes. Wayne Hyatt followed up with comments on the driving of pilings at Main Street Station and that the impacts are minimal.

- Mark Coombs asked when the construction would occur. Emily Stock said it is unknown but would start in DC then go to Fredericksburg then Richmond and Ashland last.

The meeting concluded at 12:00pm.

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update & Effect Discussion with Consulting Parties

Tuesday, June 26, 10:00am-12:00pm
Dovetail office, 11905 Bowman Drive, Suite 502, Fredericksburg

AGENDA AND MEETING NOTES

Attendees:

John Winkle- FRA
Randy Selleck- DRPT
Carey Burch- Project Team
Wayne Hyatt- Project Team
Karen Harrington- Project Team
Kerri Barile- Project Team
Heather Staton- Project Team
Emily Calhoun- Project Team
Adriana Moss- Project Team
Erik Nelson- City of Fredericksburg
Eric Mink- NPS Fredericksburg
Emily Kambic- ABPP
Angelina Jones- ABPP

1) Introductions (all)

2) General Project Overview and Current Status (Emily/Randy S.)

3) Cultural Resource Studies (Kerri B.)
- Pre-2018 Work
- 2018 Technical Studies
- DHR Replies on Eligibility

4) Project Effect (Kerri B.)
- List of Historic Properties
- DHR Effect Determinations
- MOA

5) Summary of FEIS and Remaining NEPA Process (Steve W. and Carey B.)

6) Questions and Answers (all)

- Eric Mink asked about Jackson's Earthworks. Kerri Barile described the additional survey to this resource in the spring of 2018 due to expansion of limits of disturbance. The boundaries of the earthworks were increased, and the project will now have an adverse effect. Wayne Hyatt described additional engineering efforts at the rail curve to minimize impacts.

- Eric Mink asked if we confirmed the boundaries of the battlefields to assure we have the latest. Kerri Barile stated that the boundaries were reconfirmed.

- Eric Mink asked about the latest designs at Jackson's Shrine. Wayne Hyatt stated that the only changes have been near the entrance where a few small safety upgrades were needed.

- Erik Nelson asked about resources with an adverse effect in downtown Fredericksburg. Kerri Barile described each resource and stated that changes occurred since the DEIS due to the inclusion of the parking deck.

- Erik Nelson asked about the rail tracks at Lansdowne Road. Wayne Hyatt and Carey Burch shared details on the proposed overpass.

- Emily Kambic asked about battlefield boundaries. She is concerned about use of Potential NRHP boundaries due to archaeological resources and suggested using the Study Area boundaries instead. Kerri Barile described the archaeological survey process, and that the entire corridor was examined and not just within resource boundaries. As such, the whole corridor including Study Areas has been surveyed for archaeological resources.

- Emily Kambic asked for the definition of no adverse effect and to confirm why all battlefields received this designation. Kerri Barile provided the definition and described the effect analysis completed and DHR consultation. John Winkle stated that additional information on the definitions of effect should be included in the FEIS for all.

- Emily Kambic requested data on three battlefields not included in the list. Kerri Barile replied that they are not in the project area as they are in areas where no changes are being made, such as in Prince William County where construction is already completed.

- Eric Mink asked if there will be any changes in the queuing of trains and if there will be any queuing in the battlefields. Wayne Hyatt and Carey Burch said no queuing will occur in the battlefields.

- Eric Mink pointed out some discrepancies with the team GIS data and boundaries of ownership near the railroad. Karen Harrington stated that we have data as of a year ago or so, and that all ownership info will be cleaned up well in advance of the right of way stage.

The meeting ended at 11:15am.

SOUTHEAST HIGH SPEED RAIL

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update & Effect Discussion with Consulting Parties

Thursday, June 28, 10:00am-12:00pm

Parsons office, 100 M Street, SE, Suite 1200, Washington, DC

AGENDA & MEETING NOTES

Attendees:

John Winkle- FRA
Emily Stock- DRPT
Carey Burch- Project Team
Steve Walter- Project Team
Wayne Hyatt- Project Team
Kerri Barile- Project Team
Emily Calhoun- Project Team
Heather Staton- Project Team
Jennifer Kleinman- Project Team
Sarah Stokley- ACHP
Matt Virta- NPS GW Parkway
Garrett Fesler- Alexandria Archaeology
Tatiana Niculescu- Alexandria Archaeology
Rob Niewig- NTHP
Sharee Williamson- NTHP
Sarah- NTHP

1) Introductions (all)

2) General Project Overview and Current Status (Emily/Carey B.)

3) Cultural Resource Studies (Kerri B.)
- Pre-2018 Work
- 2018 Technical Studies
- DHR Replies on Eligibility

4) Project Effect (Kerri B.)

- List of Historic Properties
- DHR Effect Determinations
- MOA

5) Summary of FEIS and Remaining NEPA Process (Steve W. and Carey B.)

6) Questions and Answers (all)

- Matt Virta asked how this project is coordinating with the Long Bridge study? Emily Stock described the partnership and ongoing meetings and consultations. Matt followed up by asking if the team is specifically working with the Long Bridge project team on effects and mitigation, and Emily said that all data is being shared and coordinated.

- Sarah Stokley asked about 23 adverse effects and if they are direct/indirect and for more details. Kerri Barile went through the list of historic properties and described impacts as well as DHR feedback on effects to date. Specific conversations were held regarding Doswell (moving of the rail tower) and Ashland (avoiding downtown but adverse effect on Berkleytown HD). Sarah asked if Ashland and involved parties were pleased with the project resolution in Ashland. Emily Stock and Carey Burch described the ongoing communication and said yes, they are pleased.

- Rob Niewig asked about train speeds in Ashland and for additional discussions regarding area involvement. Carey Burch stated that the train speeds will not change. Emily Stock described the numerous meetings with special advisory committees regarding Ashland. Rob followed up to ask if the College has been involved, and Emily said yes. Kerri Barile followed up with a summary of effects with the change in Ashland.

- Rob Niewig said the NTHP is particular concerned with Shockoe Bottom. Wayne Hyatt gave an update on the engineering and efforts to minimize plans in the area, including reducing the platform length and width, using existing viaducts, etc. He also discussed removing the parking deck. Rob followed up with additional questions regarding Main Street Station, as it is a National Historic Landmark. He particularly wanted additional details on impacts to the station and its design. Details were provided by Wayne and Carey Burch.

- Rob Niewig stated that there are additional concerns beyond architecture, notably regarding the archaeological resources in the area. Kerri Barile described the APE, surveys conducted to date, and presence of recorded sites in the area, as well as preliminary thoughts on project effect. She disseminated historic overlay maps. She also discussed the newly recorded African-American cemetery off of Hospital Street and avoidance plans there. Emily Stock followed up with dialogues with the City of Richmond and other vested groups to assure that all voices were taken into account and projects by others were involved in plans.

- Building on this, Rob Nieweg said he was concerned with consultation and that it has not been as robust as it should be with people not on the list of consulting parties. Emily Stock requested that the NTHP help to orchestrate a broader consultation group. Rob then followed up with additional information on the importance of this area both as a historical site but also as a modern place of remembrance and consciousness. Good consultation is imperative. He also brought up the difference between direct and indirect use as a result of the project and cumulative impacts that may come due to increased train traffic. John Winkle asked for the status of the park and the plans mentioned by the NTHP. Rob stated that they are in the works but there is no funding at this time.

- Rob Niewig asked if the Dutton & Associates report has been consulted. Kerri Barile said yes, all previous studies in this area have been thoroughly investigated. Steve Walter confirmed that a chapter specifically discussing previous efforts will be in the FEIS.

- Sharee Williamson asked for a synthesis of reviews on induced development impacts. Steve Walter said the DEIS had a chapter on this and presented a summary. Rob Niewig and Sharee both stated that additional consultation and evaluation of all levels of impacts was needed. They stated that they believed that the archaeological studies conducted to date were inadequate. They also said some sites may be eligible under Criterion A as well as D. Kerri Barile said additional consultation is definitely in the works on all of these areas and asked the NTHP to provide this feedback in their formal response on information received to date. John Winkle followed this up with a review of FRA’s criteria for impacts, that a project has to be “planned and funded.”

- Sharee Williamson asked if there been visual, noise, and vibration studies. Carey Burch stated that there have. John Winkle also described the impacts from freight v. passenger trains and stated that freight is outside the scope of the current project.

- Emily Stock stated that dialogues with the City are ongoing and part of this is on their shoulders as they are the property owners and arbiters of zoning. The team fully understands the sensitivity of the area and will continue to work on this issue.

- Sarah Stokley asked for additional context on the planning of Memorial Park. Rob Nieweg and Carey Burch had a dialogue on the plans, induced development, City plans, and other issues.

- Sharee Williamson asked for the status of the 4(f) review and FEIS. Steve Walter provided an update on both issues.

- Sarah Stokley asked if any other issues besides those brought up during this meeting had been discussed during the other consulting party meetings. Kerri Barile provided a brief summary of the Richmond and Fredericksburg meetings as well as calls with other consulting parties.

- Garrett Fesler asked if there had been any discussion on calling the Shockoe area a Traditional Cultural Property (TCP). Rob Nieweg backed this analysis. Kerri Barile said they would take a look at this concept. She also said that connections between the railroad and the slave trade would be an interesting topic for mitigation. Sarah Stokely asked if any other slave-related sites are TCPs. Kerri said she would follow up on this too.

The meeting ended at 11:55am.

City of Richmond Update
July 19, 2018; 1:00pm

Meeting Notes

Attendees:

Emily Stock- DRPT
Carey Burch- Project Team
Kerri Barile- Project Team
Amy Inman- City of Richmond
Kim Chen- City of Richmond

1) Project Update- Emily Stock provided a general overview of the project as well as the preferred alternative in Richmond. She also described the public outreach to date.

2) Cultural Resource Update- Kerri Barile described the LOD studies in the spring of 2018, eligibility recommendations, and commencing project effect. She also described the consulting party meetings and overall feedback.

- Kim Chen asked if the team was aware of the later-dating African-American cemetery north of Shockoe. Kerri said they were and had actually recorded it as part of DC2RVA. She then shared the overlays showing the boundaries of the cemetery and how the project had been changed to minimize impacts. The City was appreciative of these efforts.

- Amy Inman asked about Shockoe, and Kerri shared additional overlays showing this area. Kerri and Carey Burch discussed ways the project had been changed to minimize impacts here. Amy asked if we were coordinating with other groups, and Kerri listed the consulting parties and other vested groups involved in the dialogue.

- The City representatives said they have no concerns with the project at this time.

The meeting ended at 1:30pm.

City of Richmond Update
August 29, 2018; 9:00am

Meeting Notes

Attendees:

Douglas Dunlap- City of Richmond
Kim Chen- City of Richmond
Jeannie Welliver- City of Richmond
Julie Langan- DHR
Emily Stock- DRPT
Carey Burch- Project Team
Kerri Barile- Project Team

1) Introductions (all)

2) DC2RVA Overview/Recommended Alternative for Main Street Station Area

Emily Stock and Carey Burch provided an overview of the corridor in general and specifically plans for Main Street Station.

Jeanne Welliver asked about project timeline, and Emily presented data, including a potential ROD in April 2019.

3 & 4) Section 106 Process Overview and Consulting Party Comments

Kerri Barile provided a general overview of the 106 process, followed by a synthesis of the results of the project with a focus on Richmond. The group also discussed the National Trust for Historic Preservation (NTHP) letter and their specific questions.

Jeanne Welliver said that she has 18 months of collaborative notes from the City's Shockoe history initiative. She will disseminate this data to the team. She also described numerous projects that they City has done or will be doing in this area, including archaeology and creating overlay districts to protect resources from future development.

The topic of Shockoe as a Traditional Cultural Property (TCP) was addressed. Julie Langan restated the DHR's opinion that the area does not meet the definition of a TCP but was looking for FRA to formally make a recommendation one way or another on this. All agree that there is a district here and it may best be considered part of the existing Shockoe Valley and Tobacco Row HD or it may be a new district in the future, but information to date suggests the former. This is how it is being treated in the DC2RVA project to date.

Jeanne Welliver stated that the City is considering defining a slave trade district as a future initiative. Kerri Barile said that perhaps a joint venture could be included as a mitigation in the MOA. Jeanne said this would work well with the City's existing overlay district.

Julie Langan brought up Lumpkins and the Burial Ground as individual resources, and Kerri Barile confirmed the previous dialogues with all parties and that the current trajectory is to assume eligibility for Lumpkins under A and D but that the Burial Ground is outside of the APE. All parties agreed with this statement, including the City of Richmond.

5) Development in Shockoe

To assure that all parties are on the same page, the meeting turned to a discussion of reasonably foreseeable development and induced development in the Shockoe area. Specifically, scopes, potential impacts, timeframe, funding and preservation efforts were described for a dozen projects including the small area plan for Shockoe Bottom, additional archaeology at Lumpkins, Rose Fellowship recommendations, I-95 improvements, Shockoe Street study, Farmer's Market project, the Memorial Park, and others.

The City assured that it is on top of all of these projects and is making sure that preservation is a component of all work, including memorialization and preservation in place as appropriate.

The City stated that they would put together a letter outlining all of their initiatives.

6) Next Steps

The meeting ended with a synopsis of next steps. There is a meeting September 5th between the Mayor, DRPT, and Secretary of Transportation, among others, to assure commitments.

The group also discussed on-site meeting at Shockoe with all consulting parties.

Lastly, preliminary dialogues on the MOA for DC2RVA were shared.

The meeting ended at 11:00am.

Preparation for Shockoe Meeting/NTHP and Others Update
September 10, 2018; 11:30am

Meeting Notes

Attendees:

Emily Stock- DRPT
Sarah Stokely- ACHP
Marc Holma- DHR
Roger Kirchen- DHR
Rob Nieweg- National Trust for Historic Preservation (NTHP)
Sharee Williamson- National Trust for Historic Preservation (NTHP)
Lisa Bergstrom- Preservation Virginia
Elizabeth Kosteney- Preservation Virginia
Anna Edwards- Sacred Ground Project
Carey Burch- Project Team
Kerri Barile- Projet Team

- Held call to discuss upcoming in-person meeting in Shockoe/Richmond to discuss project. Included dialogue on meeting content and invitees.

- Emily Stock discussed the purpose of the call as several groups brought up invitee lists for the upcoming on-site Richmond meeting, including NTHP, Preservation Virginia, City of Richmond, and Historic Richmond Foundation. Kerri Barile discussed how this meeting fits within previous and future meetings on this area and the whole corridor.

- Emily Stock discussed DRPT's thoughts on some of the upcoming meeting components, including the use of visuals on site to show the platform modifications, boards to discuss plans, and how the goal is to answer any questions folks may have and solicit feedback on all aspects of the project.

- Sharee and Rob stated that their goal is to assure input from local stakeholders and to make sure they are included in the meeting and other dialogues; this is especially important for Shockoe. Anna Edwards followed up to echo this point, to assure that local voices are heard as the process moves forward. Emily Stock replied to say that they want local voices to be heard as well and completely concur with these thoughts. She followed up by asking both groups to provide a contact list for invitees.

- Rob Nieweg said they will provide a list of names. Rob Nieweg followed up to assure that these folks would be invited, and Emily Stock said yes. He also made sure that we're really talking about key representatives to speak for a group and not whole groups. Both Emily Stock and Marc Holma said yes.

- Anna Edwards also said she will provide a list of participants.

- Kerri Barile said that the whole list of consulting parties will also be invited, as well as the names received based on this meeting.

- As a follow up to Rob Nieweg's question on key representatives v. whole groups, Kerri Barile offered for the team to meet with any group who may want information disseminated to a larger body than just key representatives.

- Sarah Stokely asked if an agenda can be circulated in advance and if a post-meeting summary would be distributed. Emily Stock said yes to both.

- The conversation turned to setting an actual date for the meeting. All agreed that it would be best to have it within the next month. Emily Stock was going to send a list of blackout dates to this group to start refining potential dates. She and Kerri Barile were going to work on an agenda and circulate it to the group.

The meeting ended at 12:15pm.

801 E. Main St., Suite 1000
Richmond, VA 23219

City of Alexandria Update
October 2, 2018; 10:00am

Meeting Notes

Attendees:

Catherine Miliaris- City of Alexandria
Wayne Hyatt- Project Team
Karen Harrington- Project Team
Kerri Barile- Project Team

Catherine asked for a summary of work conducted since June. Kerri provided an overview. Of particular note in Alexandria, Kerri described the process of completing an evaluation-level analysis of the East Rosemont HD and the finding of not eligible for this resource. Kerri told Catherine she would get her the exact page numbers in the corresponding cultural resource report and also the DHR's reply on this topic.

Catherine asked if there had been any changes to the design in this area and, if so, if the team could provide details. Wayne replied that there are no sound walls or retaining walls in the city that would be visible as barriers. The only retaining wall is at Station and Buchanan. All temporary construction access is in the center of the tracks to minimize impacts.

Catherine asked about the GW High School, and Wayne stated that the new track would be to the east of/away from the school.

Regarding the Parker-Gray HD, Catherine asked if residents would be made aware of any road closures associated with construction, and Wayne stated that they would.

Wayne then went on to describe changes south of Parker-Gray and said that all changes are in the existing ROW. Construction would be between the tracks, including near Phoenix Mill. Catherine was very pleased to hear this data. Kerri suggested looking at the interactive map on the webpage if she wants to take a tour of the corridor to see exactly where construction would occur.

Catherine stated that she appreciated the accommodation for a separate call since she couldn't attend any of the consulting party meetings and she was grateful for the overall responsiveness of the team.

The meeting ended at 10:30am.

801 E. Main St., Suite 1000
Richmond, VA 23219

Project Update & Mitigation Discussion with Consulting Parties

Thursday, October 4, 2018; 1:30pm-3:00pm
Dovetail office, 11905 Bowman Drive, Suite 502, Fredericksburg

AGENDA & MEETING NOTES

Attendees:

Emily Stock- DRPT
John Winkle- FRA
Carey Burch- Project Team
Karen Harrington- Project Team
Wayne Hyatt- Project Team
Kerri Barile- Project Team
Heather Staton- Project Team
Emily Calhoun- Project Team
Erik Nelson- City of Fredericksburg
Kate Schwartz- City of Fredericksburg
Justin Patton- Prince William County
Betsy Hodges- Ashland Museum
Tatiana Niculescu- Alexandria Archaeology

1) Introductions and Safety Briefing (all and Kerri Barile)

2) General Project Overview and Current Status (Emily Stock and Carey Burch)

3) Summary of FEIS Status and Remaining NEPA Process (Carey Burch)

4) Cultural Resource Update (Kerri Barile)
- Summary of Eligibility/List of Historic Properties
- Project Effect
- MOA Mitigation Stipulations

5) Questions and Answers (all)

- Justin Patton asked if the original bridge at the Occoquan is being maintained. Wayne Hyatt said yes, and a new bridge would be built to the east. He said he thought the MOA mitigation suggestions looked good.

- Justin Patton also stated that the mitigation for Rippon Lodge as suggested looked appropriate. He did state that there is an existing sign related to the viewshed on the Rippon property and suggested that a better location for the recommended sign may be along Blackburn Road. Kerri Barile said she would alter the MOA to state that a sign location would be determined in consultation with Prince William County.

- Justin also said that a good mitigation item for the whole corridor (RF&P perhaps) would be an online project map/storyboard to highlight the historic resources. He provided an example. The team will look into working this into the mitigation.

- Kate Schwartz asked about project plans in Fredericksburg near the existing train station. Wayne Hyatt and Carey Burch described project plans. Kerri Barile followed up that the work will have no adverse effect on the resource per the DHR.

- Erik Nelson asked about the proposed new station and its location. Emily Stock and Carey Burch described ideas and committed to staying in touch with City on all station development plans.

- Regarding mitigation, Kate Schwartz suggested creating a display of artifacts in the new train station for remains found during the data recovery of the three archaeological sites in town. The team said they would add this to the mitigation roster. Kate and Erik Nelson thought the remaining mitigation ideas looked good.

- Kerri Barile asked Betsy Hodges if she had any questions or concerns. Betsy mentioned that the Town is looking to get funds to do a National Register nomination of the Berkleytown HD next year so she thought an alternative mitigation may be a better idea. Kerri mentioned for her to talk to colleagues and she would get back in touch for additional ideas.

- Tatiana Niculescu had no questions or comments.

The meeting ended at 2:15pm.

Richmond, VA 23219

Project Update & Mitigation Discussion with Consulting Parties

Friday, October 5, 2018; 10:00am-11:30am

Parsons office, 100 M Street SE, Suite 1200, Washington, DC

AGENDA & MEETING NOTES

Attendees:

Randy Selleck- DRPT
Carey Burch- Project Team
Wayne Hyatt- Project Team
Karen Harrington- Project Team
Kerri Barile- Project Team
Emily Calhoun- Project Team
Jennifer Kleinman- Project Team
Mark Coombs- American Battlefield Trust
Adam Gillenwater- American Battlefield Trust
Emily Kambic- ABPP
Bradley Krueger- NPS GW Parkway
Lauren Hammig- NPS National Capital Region

1) Introductions and Safety Briefing (all and Jenny Kleinman)

2) General Project Overview and Current Status (Randy Selleck and Carey Burch)

3) Summary of FEIS Status and Remaining NEPA Process (Carey Burch and Jenny Kleinman)

4) Cultural Resource Update (Kerri Barile and Wayne Hyatt)

- Summary of Eligibility/List of Historic Properties
- Project Effect
- MOA Mitigation Stipulations

5) Questions and Answers (all)

- Laurel Hammig asked for an overview of changes near the GW Parkway. Wayne Hyatt provided an overview. As a follow up, she asked if determinations have been made regarding vegetation along the parkway. Wayne said no details have been worked out yet but they are working with Arlington and the staff with the Long Bridge project to come up with details.

- Laurel Hammig asked for details on project access and vegetation for areas south of the parkway. Wayne stated that all access is from outside of the parkway and none will be from the parkway itself. Also, there is no vegetation removal except for some within the CSX ROW. Randy Selleck confirmed that vegetative removal would be part of final design. Laurel asked if there are any communication upgrades in this area, and Randy stated that most will be buried. If there are new signals, they will discuss these with the NPS.

- Brad Krueger had no additional questions on the GW Parkway.

- Mark Coombs asked if there were any changes to battle-related resources since the June 2018 meetings. Kerri Barile showed some maps and stated that no, there were no project design changes in these areas. Mark confirmed that this also applied to Slaughter Penn and that all changes will be in the existing ROW. Wayne Hyatt confirmed this and said that even utility improvements are restricted to the existing ROW here.

- Kerri Barile clarified the point made in June that there had been a change at that time regarding Jackson's earthworks. There is now an adverse effect due to design changes. Mark suggested that the team talk to NPS-Fredericksburg regarding signage for both Civil War sites near Fredericksburg. The team committed to doing this. She also shared the idea of a project corridor-wide online story board, as suggested during the Fredericksburg CP meeting. The group concurred this was a terrific idea.

- Emily Kambic had no additional questions on this topic.

- Laurel Hammig asked for a general schedule. Kerri Barile provided a schedule for cultural resources, and Jenny Kleinman provided one for the FEIS.

- Mark Coombs asked what the future plans are for communicating with the public during construction. Randy Sellick confirmed that extensive coordination would occur and it would be staged per segment to make sure the data is fresh. Carey Burch also said the public will be involved in a context sensitive design.

- Kerri Barile ended the meeting with a summary of next steps.

The meeting ended at 11:30am.

Project Update & Mitigation Discussion with Consulting Parties and Other Vested Parties

Friday, October 12, 2018; 10:00am-12:00pm
Main Street Station, Richmond, Virginia

AGENDA & MEETING NOTES

Attendees:

John Winkle- FRA
Sarah Stokely- ACHP
Jaime Loichinger- ACHP
Marc Holma- DHR
Roger Kirchen- DHR
Jennifer Mitchell- DRPT
Michael McLoughlin- DRPT
Emily Stock- DRPT
Randy Selleck- DRPT
Nick Ruiz- DRPT
Carey Burch- Project Team
Karen Harrington- Project Team
Wayne Hyatt- Project Team
Kerri Barile- Project Team
Heather Staton- Project Team
Delegate Dolores McQuinn- Chair, Slave Trade Commission
Sharee Williamson- NTHP
Justin Sarafin- Preservation Virginia
Elizabeth S. Kostelny- Preservation Virginia
Jessica Russo- Historic Richmond Foundation
Kim Chen- City of Richmond
Jeannie Welliver- City of Richmond
Doug Dunlap- City of Richmond
Robert Steidel- City of Richmond
Selena Cuffee-Glen- City of Richmond
Free Egunfemi- UntoldRVA

Rasheeda Creighton- Shockoe Partnership
Brian White- Shockoe Partnership
Chris Johnson- Shockoe Partnership
Lynetta Thompson- Community Unity in Action, Richmond Branch NAACP

Agenda:

1. **Introductions/safety moment (Jennifer Mitchell and Carey Burch)**
2. **Agenda/Purpose of Meeting (Emily Stock)**
    - Inform participants on status of DC2RVA
    - Advance the Section 106 process specific to DC2RVA
    - Listen to other issues/concerns related to Shockoe Bottom and/or Main Street Station area that could have an effect on or be affected by DC2RVA
3. **DC2RVA Project Overview (Emily Stock and Carey Burch)**
4. **Preferred Alternative at Main Street Station (minimal footprint) (Carey Burch and Wayne Hyatt)**
    - New track on existing viaduct structure
    - Station facilities (inside Main Street Station)
    - New platforms added inside/outside of existing viaduct structure
    - Parking (note parking deck eliminated to reduce impacts to property and cultural resources)
5. **DC2RVA Section 106 Process (Kerri Barile)**
    - Brief overview of 106 requirements
    - Summarize history of area development, including rail history *(Show historic maps, etc in handouts and on boards) – simple facts, but making the point there are many layers of history in the area to be considered.*
    - Summarize steps by City of Richmond and others to preserve/protect the area (give Trust and other groups recognition for their preservation efforts)
6. **Walking Tour showing area of Proposed Platforms (all)**
    - Traffic cones placed at approximate edge of west side platform showing extent of potential area of disturbance
7. **Historic Properties and DC2RVA compliance with Section 106 process in Shockoe Bottom area**

- Review 106 findings to date on potential/eligible resources in APE
- Effects determination to date
- Proposed changes to potential/eligible resources and effects
- Mitigation suggestions to be applied in Draft Memorandum of Agreement

8. Next Steps (Emily Stock and Kerri Barile)

Summary of Questions and Answers:

- Sharee Williamson asked what the timing is of the project. Emily Stock stated that we hope to have the 106 process wrapped up by the time we publish the FEIS this winter and the ROD this spring.

- Jeanne Welliver asked what would happen with freight traffic. Would it be routed to the A-line? Or more freight in Richmond? Carey Burch stated that they do not know the freight schedule and routing as freight/CSX traffic is only marginally part of the study (only providing base information; building freight capacity is not part of the study though).

- Jeanne then asked if Environmental Justice studies had been done as part of the FEIS and, if so, is that why the downtown alternative was selected? Carey Burch stated that selection of downtown was the result of multiple pieces of information, including environmental justice studies done as part of the FEIS but also through the City's initiative to make Main Street Station a transportation hub and a host of other studies that have suggested the success of this route. He also reiterated the results of the DEIS and alternatives studies if the line was put elsewhere in the city.

- Following up on this, Delegate McQuinn asked how this project blends with the City's initiatives to bring people downtown? Also, were noise studies conducted as part of the environmental work? Emily Stock said that this area as a connection to all other points in town is based in history and this project aims to continue that. It will also bring visibility to some really important historical sites and preservation actions in this area. Delegate McQuinn followed by asking for clarification on noise and stated that this area has immense historical significance and the project needs to be sensitive to the concept of memorialization. Emily Stock and Carey Burch presented data on the noise study done as part of the project.

- Sharee Williamson asked if there are any considerations to dampen the noise? Emily Stock said no sound walls or other barriers would be erected but they have done other mitigation to keep trains where they are and sound levels at the current (or lower) decibels. This is why other options were removed- because of impacts to infrastructure and potential for increased noise. John Winkle followed up by reminding folks that freight noise and freight impacts are not part of the project. The lines are owned by CSX and they completely control that aspect.

- Sharee Williamson asked why the parking deck has been removed from the study. Carey Burch stated that it was not needed and explained the presence of the City-owned deck to the west. Jennifer Mitchell followed up that this is an urban station and mentioned several other ways folks can get to the station including bus rapid transit, Uber, taxi, etc. Jeanne Welliver followed up that there are several extant City facilities nearby that can accommodate cars in addition to the parking deck mentioned by Carey.

- Moving into cultural resource studies, Sharee Williamson asked about the archaeological APE and if sites were being considered for their above-ground significance too (i.e., under Criterion A). Kerri Barile provided a synoposis of the dialogues conducted on this topic since June and the current direction of the analysis.

- Regarding the concept of Traditional Cultural Property (TCP), Sharee Williamson asked if the area is being considered a TCP? Kerri Barile provided a definition for the group of a TCP and then presented a synthesis of meetings that have been held on this topic. Roger Kirchen and Marc Holma then presented their thoughts as the DHR, Sarah Stokely and Jaime Lochinger presented their thoughts as the ACHP, and John Winkle stated the FRA's position. In sum, the area is not being considered a TCP.

- Roger Kirchen followed up with additional data on Lumpkins Jail/Devil's Half Acre site. It has not been evaluated as a resource. He reiterated that the project is considering the site eligible under A and D due to consulting party feedback.

- Lynetta Thompson said that the area is very important but that the tangible elements are gone and they would have to build elements for memorialization. This project will be an impetus for this building.

- Delegate McQuinn reiterated the significance of this area and its high level of significance. Kerri Barile agreed with both Delegate McQuinn and Lynetta Thompson and said that the project is the opportunity to provide something back to the community associated with its important history as mitigation.

- Sharee Williamson said that boundaries for a slave trade district are needed and once they are established, can present a case for significance of the district at the local, state, and national levels. This includes significance under several criteria.

- To address Sharee's comment, Jeanne Welliver presented the City's map showing the locations of known slave trade-related sites and said that a lot of research has been done and the boundaries can be established by encircling these resources. She has been working closely with the Slave Trail Commission to tie these sites together through a unity walk. In fact, the City has done 19 projects in this area to record and memorialize the history here, including plans for the slave trail, a museum, archaeology at Lumpkins Jail site, etc. Delegate McQuinn followed this by stating that the City is working closely with the Virginia Commission on Reconciliation to be part of that project as well.

- Related to the archaeological sites in the area, Jeanne Welliver presented more data on the digs at Lumpkins Jail and stated the reasons that no archaeology has been done by the City at the nearby Burial Ground- several studies done by VDOT and others, no evidence found, etc.

- Free Egunfemi, Delegate McQuinn, and several others had a dialogue on striking a balance between commemorating the area and assuring that the project moves forward, as the city needs the transit option and it is good for the community. They stated that they are at the table to support the project and look forward to continuing a dialogue on finding the balance between progress and history.

- Sharee Williamson asked if there would be any additional meetings on this topic. Kerri Barile said that she is following up with every single consulting party to talk more and would circulate results of this meeting. There would also be several conference calls and perhaps one additional meeting. The goal is to continue to solicit feedback on historic properties and mitigation while allowing everyone a voice in the process.

- Jeanne Welliver stated that the City has quarterly meetings to discuss the Shockoe area and that everyone in the room would be invited to the next meeting to keep the dialogue going that way, as well.

The meeting ended at 12:00pm.

801 E. Main St., Suite 1000
Richmond, VA 23219

Historic Richmond Foundation Update

October 15, 2018; 11:00am

Meeting Notes

Attendees:

Emily Stock- DRPT
Randy Selleck- DRPT
Carey Burch- Project Team
Karen Harrington- Project Team
Wayne Hyatt- Project Team
Kerri Barile- Project Team
Emily Calhoun- Project Team
Cyane Crump- Historic Richmond Foundation
Jessica Russo- Historic Richmond Foundation

- Held conference call since Cyane Crump, Executive Director of HRF, could not attend Shockoe meeting. Kerri Barile started the call by providing a summary of the meeting. Jessica Russo with HRF, who was in attendance, said she thought the meeting was very informative and she enjoyed the dialogue.

- Emily Stock discussed changes to the project plans since the last group meeting in June, including minimizing the footprint where possible, reducing the platform at Main Street Station to 950 feet so it doesn't cross Broad Street, removing the parking deck in Shockoe, etc. She also provided a brief timeline of the process and the environmental document.

- Cyane Crump asked if the changed mentioned by Emily Stock change the cultural resource APE. Kerri Barile explained the changes and how it impacted the list of historic properties, as well as additional studies.

- Cyane Crump asked if Lumpkins Jail and the Burial Ground are now included in the APE. Kerri Barile provided data that has been presented at other meetings based on extensive dialogues with the DHR, ACHP, and FRA- Lumpkins is being assumed eligible for the NRHP under Criteria A and C and is in the APE. There is no physical evidence of the Burial Ground despite numerous attempts to locate it, thus it is not included in the APE. She also said that both are being considered contributing elements to the surrounding Shockoe Valley and Tobacco Row HD even though this designation has not been made (it is being assumed for the project to assure that the sites are included in multiple ways.)

- Cyane Crump asked if the team has an awareness of other projects going on in this area. Kerri Barile, Emily Stock, and Carey Burch all presented info on known other projects in the vicinity and the efforts to communicate with representatives of all so that the team is aware of it all.

- Returning to historic properties, Cyane Crump asked if the area would be considered a Traditional Cultural Property (TCP). Kerri Barile recounted data presented at previous meetings based on DHR, ACHP, and FRA feedback- the area is not being considered a TCP as it does not meet the definition.

- The group then looked at the preliminary mitigation stipulations sent to HRF for consideration. Cyane Crump said she would look at it more thoroughly and provide comments.

- Cyane Crump asked about the burial ground to the north, located along Hospital Street. She asked if this resource meets the same criteria as Lumpkins and should be considered eligible under A and D and thus included? Kerri Barile went over the overlays in this area to show minimized avoidance but said she would talk to the team, FRA, and DHR about its potential eligibility under A and D and inclusion as a historic property. She would follow back with HRF on this issue.

- Cyane Crump asked if design review will be included in all modifications? Kerri Barile and Emily Stock said definitely. The conversation turned to purview of design and if there is a way to include changes to the local design code as a mitigation. Emily Stock said that this isn’t possible but that she would express this concern to the City during a future meeting.

- Lastly, Cyane Crump asked about noise impacts. Carey Burch described the process the team went through to discuss noise and vibrations, including taking measurements throughout this area. There is no increase as a result of this project.

- Kerri Barile then discussed next steps, including getting maps to Cyane showing additional overlays in the Shockoe area and comments deadline from consulting parties on mitigation.

The meeting ended at 11:45am.

Town of Ashland/Ashland Museum Update
October 23, 2018; 2:00pm

Meeting Notes

Attendees:

Carey Burch- Project Team
Kerri Barile- Project Team
Nora Amos- Town of Ashland
Betsy Hodges- Ashland Museum
Will- Ashland Museum

- Held call to provide a summary on the consulting party meetings held in October as Town of Ashland could not attend.

- Carey Burch started with an update on the environmental process and preferred alternative, as well as providing some information on schedule.

- Kerri Barile then provided a 106 update including summary of studies, list of historic properties, and details on Ashland. She specifically mentioned that due to the 3:2:3 concept in Ashland, there is only one adversely effected property now, the Berkleytown HD.

- Nora Amos said that the Town is going for a cost share grant through the DHR next year to get a nomination done for the district. She asked if this could marry with the MOA and possibly still be a stipulation so that the DHR pays their half of the grant. Kerri Barile said that there are two options- one is to get the whole nomination paid for by DRPT as a mitigation but it wouldn't occur until there is funding for the construction in several years or that the town goes ahead and does their nomination as a cost share and the DRPT isn't involved at all. Nora Amos confirmed that they have to choose now and that the DRPT can't pay for it in advance, and Kerri Barile said no, no funding can be released at this time.

- The group went over the preliminary mitigations suggested for the district, and all concurred that three of the four were great (design review, oral history and signage). A dialogue ensued about what to do for a fourth mitigation. It was determined that the DRPT would help fund the development of a walking tour of the district in consultation with the Ashland Museum. They also said that they should leave the NRHP nomination in the MOA on the off chance that it is not done in advance of the mitigation.

- Nora Amos asked if anything is needed from the Town or Museum at this time? Kerri Barile said that a letter confirming the mitigation as discussed would be great.

- Betsy Hodges asked for a clarification on the difference between a local marker and a state marker, and Kerri Barile provided the data and why she suggested a state marker for this district (more visibility and recognition). Betsy said this sounded good and she concurred.

The meeting ended at 2:30pm.

801 E. Main St., Suite 1000
Richmond, VA 23219

Preservation Virginia Update
November 1, 2018; 10:00am

Meeting Notes

Attendees:

Randy Selleck- DRPT
Carey Burch- Project Team
Wayne Hyatt- Project Team
Kerri Barile- Project Team
Justin Sarafin- Preservation Virginia
Elizabeth Kostelny- Preservation Virginia

- Held call to provide a summary on the consulting party meetings held in October and additional dialogues on Shockoe area since that time. Kerri Barile provided an update on the status of resources in Shockoe, mainly that Lumpkins Jail and Graveyard for Free People and Slaves are being added as historic properties and assumed eligible under A and D but that the Burial Ground for Negros is not being added as there is no physical evidence of its existence and it is not visible from the limits of disturbance.

- Justin Sarafin said that this issue was raised at the on-site meeting and that the approach makes sense to him.

- Kerri Barile then mentioned that Masons Hall was added at the request of the Historic Richmond Foundation. Although the APE has shrunk in that area as the parking deck was removed, this resource is still on the roster of historic properties due to its significance. Justin Sarafin asked for the recommended effect, and Kerri said no adverse.

- On a broader level, Justin Sarafin asked if there has been any follow up with representatives from the City and, if so, what have transpired from those conversations? Carey Burch said that several levels of dialogues have been ongoing with the City, both as a property owner and as a consulting party. They have had positive comments on the project from the start. It was actually at the City's request that a proposed parking deck east of the Main Street Station has been removed. Justin said the removal of this deck was a definite improvement.

- Related to this, Randy Selleck said that the City is crafting a letter showing their commitment to historic preservation and this will be appended to a letter reply going to the National Trust. This data will be shared with Preservation Virginia once collected. Elizabeth Kostelny asked who is penning the letter for the City, and Kerri Barile said it is a combination of Jeanne Welliver, Doug Dunlap and Mayor Stony. The letter will be robust and detailed.

- Justin Sarafin brought up the Shockoe Alliance, which is discussing current and future development. They are talking with the mayor on upcoming projects and will make a joint announcement soon.

- Justin Sarafin brought the slave trade area back up and asked how the project and associated mitigation can advance the larger goals of preservation in Shockoe. Kerri Barile and Wayne Hyatt described efforts to avoid and minimize impacts to the greatest degree possible and shared overlays with the group. Kerri also outlined how the team is assuming eligibility for a host of resources and also assuming that they contribute to the surrounding historic district. Mitigation efforts will provide historical studies to the area. Justin said he understands the complexity of the issues at hand, especially as the City is concurrently discussing putting g a museum/cultural center in the area as a parallel project. Like others, he said the crux of the issue is to find a balance between recognizing significance and preservation initiatives but also allowing for development (including both rail and memorialization construction). The group discussed timing challenges of all involved projects and the 106 process.

- Lastly, Justin Sarafin asked for ideas on mitigation and Kerri Barile said she would email them a few rough ideas to get them started. Justin said this sounded like a good process.

The meeting ended at 10:45am.

Elgeba Folklore Society Update
November 2, 2018; 4pm

Meeting Notes

Attendees:

Emily Stock- DRPT
Carey Burch- Project Team
Karen Harrington- Project Team
Kerri Barile- Project Team
Janine Bell- Elgeba Folklore Society

- Janine Bell asked for an update as she was unable to attend the Shockoe meeting on October 12. Emily Stock provided an update on the project in general.

- Janine Bell then asked for a summary of the 106 process, and Kerri Barile described both the process and what has been done to date on this project related to this compliance. Emily Stock also stated that the significance of this area is well known so the team wanted to bring in other voices besides consulting parties to solicit input. Both Kerri and Emily provided a synopsis of comments received to date including those presented at the October 12 meeting.

- Carey Burch followed this with specific information on what is being done at Main Street Station in terms of design and modifications. Janine Bell said she understands that what is now an events center used to be the passenger shed and she asked if a new passenger area is being constructed as part of the process? Carey said yes but they’re using platforms with no superstructure. He described the minimal impacts due to the construction of the platforms and their parameters.

- Carey Burch brought up the parking deck and how it has been removed from the project. There was a dialogue on the City’s plans for parking in this area.

- Janine Bell said that this project is important as it creating a foundation to make Richmond a transportation hub in the 21st century. On its surface, she said the project doesn’t seem to impact cultural resources but she does have questions on visual impacts and, more importantly, noise and bustle associated with increased activity. Kerri Barile followed this with a discussion on cultural resource studies and how the team is looking at viewshed, setting, and feeling as important components to each resource. She discussed efforts to minimize impacts in the area, including the Lumpkins Jail/Devil’s Half Acre site and two burial grounds.

- Janine Bell brought up the area as a possible site for a future museum. She wanted to know how the pieces merge together. Kerri Barile mentioned that the team created overlays of the proposed Memorial Park and museum plans with DC2RVA project plans to assure that proposed development wouldn't overlap but would be complimentary.

- Regarding significance and mitigation, Janine Bell reiterated the importance of the history in this area and that any efforts need to acknowledge this history. How will history be involved in the plans? Kerri Barile mentioned several ongoing ideas on mitigation, including the context of the rail and slave trade. Janine said it is very important to convey the feeling of the place and to assure that this story is put out to a wider audience.

- Emily Stock thanked Janine Bell for her insightful comments and taking time to talk to the group. She said that Janine would be involved in any mitigation that takes place. We all have a responsibility to tell this story and this project can help increase area education on these significant events.

- Janine Bell said she would love to particulate and that we should make the city more accessible to everyone. This project not only brings in transportation options but also draws the eye to this important place and its history. This helps all aspects. She thanked the group for the dialogue.

The meeting ended at 4:45pm.

Historic Richmond Foundation Update
November 20, 2018; 11:00am

Meeting Notes

Attendees:

Kerri Barile- Project Team
Jessica Russo- Historic Richmond Foundation

- Kerri Barile sent Historic Richmond Foundation (HRF) a copy of the DC2RVA/FRA reply to the National Trust for Historic Preservation, letter dated November 13, 2018. HRF has raised similar concerns to the National Trust in the past.

- Emails were exchanged between HRF (Cyane Crump and Jessica Russo) and Kerri Barile regarding the letter, historic properties, project effect, and mitigation.

- Jessica Russo with HRF called Kerri Barile to discuss the National Trust letter. Specifically, she clarified which resources would be adversely effected and asked questions on the process. Kerri Barile replied and provided data.

- Regarding mitigation, Jessica Russo stated that HRF comments sent to DRPT on July 20, 2018 regarding mitigation remain accurate and they request that the data in this letter be evaluated when determining effect. Kerri Barile said the letter is in hand and she would re-read it and assure that their comments were included in the dialogue.

- Kerri Barile asked if HRF has any additional comments to add to the process or any other questions she could answer, and Jessica Russo said no. She was pleased with the process to date and appreciated the opportunity to solicit additional feedback.

The meeting ended at 11:30am.

801 E. Main St., Suite 2100
Richmond, VA 23219

National Trust for Historic Preservation and Preservation Virginia Update

December 3, 2018; 11:00am

Meeting Notes

Attendees:

Sharee Williamson- National Trust for Historic Preservation
Rob Nieweg- National Trust for Historic Preservation
Elizabeth Kostelny- Preservation Virginia
Justin Sarafin- Preservation Virginia
Sarah Stokely- Advisory Council on Historic Preservation
Marc Holma- Virginia Department of Historic Resources
Roger Kirchen- Virginia Department of Historic Resources
John Winkle- Federal Railroad Administration
Randy Selleck- DRPT
Carey Burch- Project Team
Kerri Barile- Project Team
Emily Calhoun- Project Team

- Call to discuss meetings and letters concerning the DC2RVA project and historic resources in Shockoe Bottom, Richmond. Topics included the area as a Traditional Cultural Property (TCP), effects on Lumpkins Jail/Devil's Half Acre site, the project Memorandum of Agreement (MOA), and next steps.

TCP

- Sharee Williamson stated that the National Trust had received FRA's reply letter regarding their concerns on Shockoe Bottom on November 13. They are writing a response to this letter. She asked for a clarification of the numbers discussed in the document. Kerri Barile confirmed the number of historic properties, resources involved, research that has gone into this area, etc. Specifically, she mentioned that there have been 18 meetings and calls with vested groups and agencies and extensive background research (39 reports and two dozen DHR resource files) to craft a 13 page synthesis that will be in the upcoming FEIS. The team also did extensive research on other TCPs, particularly those that do not have an affiliation with a Native American tribe including the African Burial Ground in New York City. The team also talked to the DHR and ACHP, who have also done research. Together, this resulted in the determination that the area does not meet the TCP definition as currently defined.

- Marc Holma and Roger Kirchen with the DHR followed confirming this data and stating that they have no additional comments.

- Sarah Stokely with the ACHP followed confirming this data and stating that she has no additional comments.

- Steve Walter offered to provide copies of the 39 reports and summary to the National Trust and Preservation Virginia. Roger Kirchen asked to review a list of the documents in advance due to concerns with the Archeological Resources Protection Act of 1979. Kerri Barile said she would craft this list and send it to Roger. Upon approval, copies of all documents would be sent to both the Trust and Preservation Virginia.

- Sharee asked for a clarification on what non-consulting party groups were involved in the discussions. Kerri Barile presented a list. Marc Holma asked if Kim Chen with the City of Richmond has been involved. Kerri Barile said yes, the City is a consulting party and Kim and others have received all info and been to numerous meetings.

Lumpkins Jail/Devil's Half Acre and Project Effect

- Sharee Williamson restated data presented in the FRA's letter- the site is eligible under Criteria A and is within the project APE, correct? Kerri Barile explained the decision to assume eligibility for the site (which has not been formally evaluated) under both Criteria A and D and described the process to determine effects. Specifically, she noted that consulting party feedback led to this decision. FRA has determined that the project will have no adverse effect on the Lumpkins site as the resource has integrity of location, design, materials, workmanship and association but not setting and feeling. The latter are the two aspects of integrity that could be impacted by the project as the site is outside of the archaeological APE. The site and surrounding area do not appear as they did during the resource's period of significance and donot convey a historic sense of place. This guidance comes from National Register Bulletin 36. Roger Kirchen concurred with the analysis as presented.

- Marc Holma followed up that their official decision on effect has not yet been rendered as they are waiting on all consulting party feedback prior to issuing their decision, including the current call and the National Trusts's follow up reply letter.

- Sharee Williamson brought up the site's contributing status to the surrounding Shockoe Valley and Tobacco Row Historic District. She asked how the site could be considered not individually eligible but could still be mitigated? Kerri Barile described the process. The site has not been evaluated as either an individual resource or a contributing element to the district but the FRA is assuming eligibility and that it is a contributing element. As the project will have an adverse effect on the district as a whole, will target some of the mitigation towards this site.

- Sharee Williamson asked for more information on why the “Burial Ground for Negros” was not included in the roster of historic properties. Roger Kirchen stated that the DHR finds it difficult to evaluate a site when there is no physical data. Despite several attempts to locate this resource, it is mapped based on conjecture and no physical evidence. Until more information is available, they cannot apply the criteria of eligibility. This does not diminish its importance, just how it is evaluated in a situation like this.

- Marc Holma followed by stating that the site cannot be seen from the project area either. Kerri Barile described the viewshed study that was done to see if the burial ground as mapped could be seen and it cannot due to Broad Street. Sharee Williamson asked for a copy of this study. Kerri Barile stated that she would provide it.

- Sarah Stokely asked for additional data on this issue, specifically regarding a potential adverse effect and if the National Trust thought there was one? Sharee Williamson stated that they have not done a viewshed analysis themselves and that they may concur with FRA, but they need to see the data. They just want to assure that the research has been completed.

- Following up on this, Sharee Williamson stated that their biggest concerns are regarding cumulative effects. What additional economic development could occur and what has the FRA/team done to learn about other activities? Kerri Barile stated that they have been in constant contact with the City to learn about current and future projects, including many meetings and calls. VDOT has also been contacted. Sharee Williamson asked if there are minutes from these meetings? Kerri Barile confirmed that there are, and she will get them to the group. She also said that the appended City of Richmond letter with the FRA’s reply from November 13th also summarized the dialogues.

- Regarding this issue, Rob Nieweg confirmed that the meetings/calls have included not just current projects but future projects? Kerri Barile stated in the affirmative. Data presented in the letter in hand and in the minutes to be sent would confirm this. Carey Burch followed that the City has had plans to make Main Street Station a multimodal hub for years. This is in their Land Use plan. John Winkle stated that changes to this area are coming with or without this project and use of Main Street Station was actually spurred by the City.

MOA

- Kerri Barile confirmed that all on the call had received the list of very preliminary mitigation ideas. The group responded in the affirmative and stated that they needed some time to peruse and analyze the list.

- Marc Holma asked for clarification if any buildings are being demolished because of the undertaking. The team stated that no, no buildings are being demolished. The tower in Doswell is being moved but no other physical impacts.

- Sharee Williamson asked for a clarification on the archaeological sites in Shockoe Bottom on the list of adversely effected resources. Kerri Barile stated that all three are related to the early-twentieth century railroad activity in the area.

- Sarah Stokely returned to the concept of building impacts and wanted to triple check that no buildings, especially those in Richmond's Shockoe area, will be demolished. Marc Holma said he spoke in error and no buildings will be demolished as part of this project. Randy Selleck said that plans associated with the creation of a museum in this area by an independent group (outside the scope of the current project) include the demolition of the Seaboard Building, so that may be where confusion lies. Kerri Barile said that the Seaboard building dates to around 1910 and was found to be not individually eligible during the Richmond to Raleigh study.

- Rob Nieweg asked for a clarification on the Shockoe Valley and Tobacco Row Historic District. This is the district that was determined to be eligible in the 1980s and not the slave trade industry proposed district from the 2000s, right? Kerri Barile confirmed this data. Rob Nieweg asked to assure that consulting party and city interest groups are involved in any mitigation in this area.

Next Steps

- Sharee Williamson asked when the requested data would be received. Kerri Barile said she would start gathering the information as soon as the call was complete and would have it to the group within a few days. Sharee Williamson said they would craft their reply immediately upon receipt of the data.

- Marc Holma reiterated that the DHR will not issue a reply to the second effects addendum until National Trust and Preservation Virginia comments are in hand. Rob Nieweg said he appreciated their consideration.

The meeting ended at 12:00pm.

AGENDA & MEETING NOTES

Attendees:

See attached attendance roster

Agenda:

1. Safety briefing (Carey Burch)
2. Purpose of visit (Emily Stock)
    - Review DC2RVA rail project including purpose and need and history
    - Review DC2RVA rail project's preliminary plans for the area around the Graveyard For Free People of Color and Slaves (Site 44HE1203), located at the northeast corner of 5th and Hospital Street in Richmond, VA
    - Review DC2RVA rail project's preliminary engineering and cultural resource studies to date, and project commitments
    - Obtain feedback and discuss next steps
3. Map review with Preliminary Plans (Carey Burch and Wayne Hyatt)
    - Using large map sheets, discussed original and revised project limits of disturbance
    - Described location of additional track, grade-separation of Hospital Street and pedestrian sidewalk over the tracks; re-alignment of 7th Street, use of retaining walls to keep Hospital Street within existing right-of-way
    - Discussed parameters of 30 percent design (preliminary) and next steps in the design process
4. Site visit (Kerri Barile and Tony Opperman)
    - Discussed cultural resource studies undertaken by the DC2RVA rail project to date, including coordination with DHR, the City of Richmond, and other stakeholders

- Using the Timeline handout, discussed area history including past changes to the Graveyard For Free People of Color and Slaves (Site 44HE1203)
- Discussed road improvements (separate from DC2RVA road improvements) proposed in the area by VDOT and the City
- Walking tour along public sidewalk adjacent to the Graveyard For Free People of Color and Slaves (Site 44HE1203); reviewed DC2RVA project preliminary design elements
- Discussed recommended project commitments

5. Next steps (Kerri Barile and Emily Stock)

- Discussed timeline for DC2RVA rail project implementation and project commitments, which could be ten plus years into the future, depending on funding availability and the progress of higher-priority sections of the corridor in Northern Virginia

Summary of Questions and Answers:

- Steve Thompson asked for a clarification to the known modifications to Hospital Street, including those that have occurred in the past, those originally proposed as part of the DC2RVA project, and those that are part of the modified plans currently represented in the 30 percent designs. Wayne Hyatt discussed the DC2RVA project with Kerri Barile and Carey Burch adding additional data on the area's history.

- Cyane Crump asked for more information on the third track to be installed in this area, specifically asking on which side of the current tracks work will be performed. Carey Burch stated that the modifications in this area will be on the east side of the existing tracks and away from the mapped cemetery.

- During a discussion of the proposed project commitments, Cyane Crump asked for more information on 3D modeling as referenced in the proposed landscape study. She also asked for a definition of "archaeological testing." Kerri Barile provided a clarification on both of these items to describe the documentation and archaeological process.

- Related to the commitments, Steve Thompson asked if archival research would also be a commitment; Kerri Barile confirmed it would, as well as oral histories, if possible, with descendants and those with knowledge of past activities in this area.

- Steve Thompson asked if the field studies would not be done until the 90 percent plans were completed. Kerri Barile and Wayne Hyatt confirmed this, and explained that archaeology is destructive so work will not be done until exact limits of disturbance have been determined, at advanced design stages after construction funding is secured. Steve followed up by asking if testing would occur in areas where fill is needed (versus excavation). Kerri confirmed that this will occur as the goal is to identify any possible interments or archaeological features in any areas touched by the project to avoid construction on top of graves or other sensitive archaeological features. If human remains are encountered, the DHR will be contacted and a plan will be derived. Wayne stated that construction plans may need to be reexamined if that is the case to assure that things are done properly.

- Ana Edwards asked for a definition of "grade separation." Wayne Hyatt provided the data.

- Emily Stock stated that DRPT is coordinating with the community, VDOT and the City of Richmond to keep in touch on DRPT's work in this area and to assure that the DC2RVA rail project commitments remain valid and appropriate.

- Ryan Smith asked about the cemetery lot and if there are any plans for lot development and what may happen to the extant gas station on the parcel. Kim Chen with the City of Richmond said that the future of the lot is up in the air, as the taxes are delinquent so the property is in a bit of limbo. She said the city cannot legally just "take" the property but they are considering acquiring it.

- Following up on the current land use question, Kim Chen said she is working with other City departments to get the land use designation changed from general business to cemetery use. This would assure that the area is included as a cemetery in all future dialogues on the parcel.

- Cyane Crump asked if the billboard currently on the lot will remain- Kim Chen was unaware of details regarding the billboard.

- Ana Edwards stated that she knows there have been attempts to communicate with the property owners in the past and asked if the City is continuing this effort. Kim Chen confirmed that the City is continuing to attempt contact, but that the owner remains unresponsive.

- Steve Thompson wanted to ensure that the whole story is told about this cemetery including not only its use as an interment area but also its post-burial history, such as the construction impacts, explaining how this activity adds up to tell the tale of the African-American experience in this area. He asked that the boundaries of the cemetery and its significance be reevaluated as part of the project commitments. Emily Stock and Kerri Barile said they will add these elements to the revised commitment document.

The meeting ended at 4:30pm.

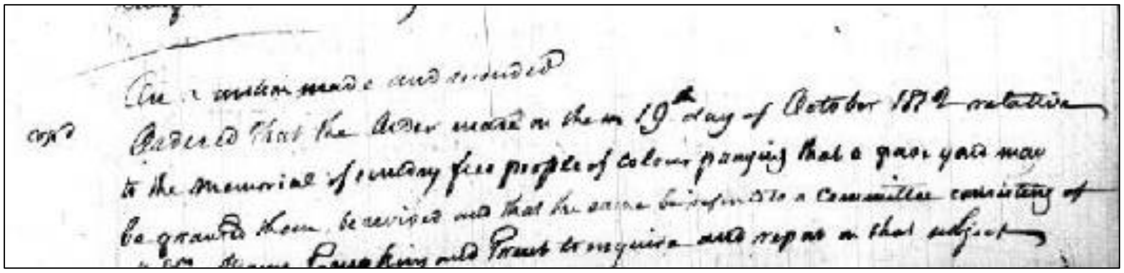
DRAFT TIMELINE OF EVENTS: SITE 44HE1203*

1799, City of Richmond Purchases Land

City of Richmond purchased the property that is currently referred to as site 44HE1203 from Nathanial Wilkerson and others, “being a portion of the same property known as ‘Poor House Tract’” (Calhoun 2013).

1816, Burial Ground Establishment

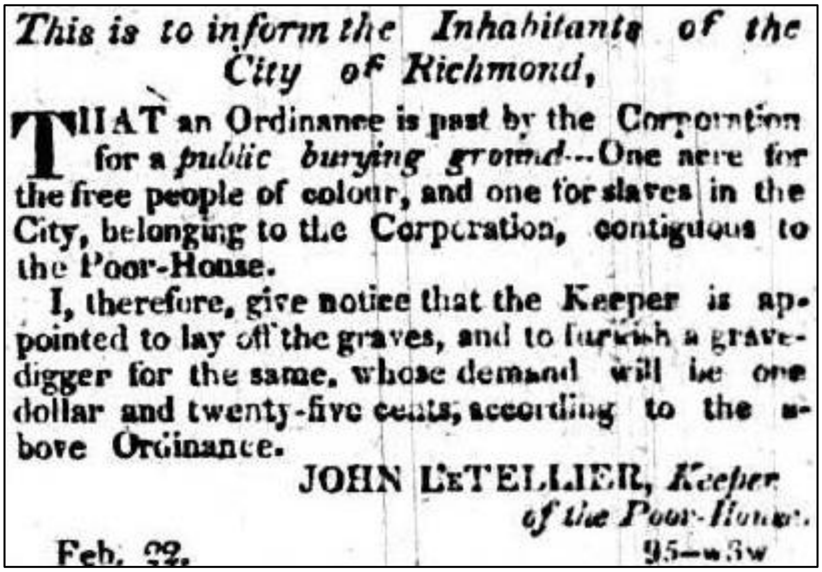
Richmond City Council Minutes address an 1812 proposal/call for establishment of a cemetery for slaves and free people of color.



On a motion made and seconded
Ordered that the order made on the 19th day of October 1812 relative
to the memorial of sundry free people of colour praying that a grave yard may
be granted them, be revived and that the same be referred to a Committee consisting of
[illegible] and Prout to enquire and report on that subject

Figure 1: Richmond City Council Minutes, 1816, Volume 5, page 23 (Calhoun 2013:Figure 5).

1816 *Richmond Enquirer* article announces establishment of burial ground.



This is to inform the Inhabitants of the City of Richmond,

THAT an Ordinance is past by the Corporation for a *public burying ground*---One acre for the free people of colour, and one for slaves in the City, belonging to the Corporation, contiguous to the Poor-House.

I, therefore, give notice that the Keeper is appointed to lay off the graves, and to furnish a grave-digger for the same, whose demand will be one dollar and twenty-five cents, according to the above Ordinance.

JOHN LeTELLIER, *Keeper of the Poor-House.*

Feb. 22. 95—w3w

Figure 2: *Richmond Enquirer* 22 February 1816 (Calhoun 2013:Figure 6).

**Timeline compiled from research presented in Calhoun 2013, research conducted as part of the DC2RVA project, and research presented by Lenora McQueen and Steve Thompson. For the ease of discussion, the area will be referred to as “site 44HE1203” as it changed names numerous times historically.*

DRAFT TIMELINE OF EVENTS: SITE 44HE1203

1835, Bates Map

Micajah Bates' 1835 *Plan of the City of Richmond Drawn From Actual Survey and Regional Plans* locates the "Grave Yard for Free People of Color and Slaves"(in red), divided into two sections. Other prominent area landmarks include the Poor House/Alms House, Jewish Cemetery, and Shockoe Hill Cemetery.

Figure 3: Site 44HE1203 on the 1835 Bates Map as it Relates to DC2RVA Project.

DRAFT TIMELINE OF EVENTS: SITE 44HE1203

1856, Ellyson Map

M. Ellyson’s 1856 *Map of Richmond* locates the Poor House/Alms House, Jewish Cemetery, Shockoe Hill Cemetery, and powder magazine, but not the Grave Yard for Free People of Color and Slaves.

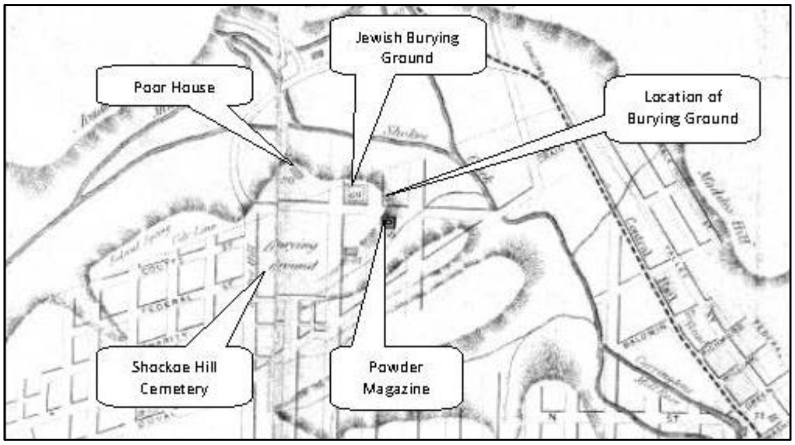

Figure 4: M. Ellyson’s 1856 *Map of Richmond* (Calhoun 2013:Figure 9).

1866, Powder Magazine Construction

E.G Rex acquires land from the City of Richmond to construct a new powder magazine (S. Thompson to K. Barile and E. Stock, letter, 29 January 2019).

1867, Human Remains Discovered During Powder Magazine Construction

The discovery of approximately 100 human skeletons during construction of the new magazine was reported by the *Richmond Whig* (April 9, 1867) and *Daily Dispatch* (April 9, 1867) (S. Thompson to K. Barile and E. Stock, letter, 29 January 2019).

1867, Michler Map

Gen. N. Michler’s 1867 *Richmond [1862–1865]* locates the Poor House/Alms House, Jewish Cemetery, Shockoe Hill Cemetery, and powder magazine, but not the Grave Yard for Free People of Color and Slaves. It appears that the Hospital Street alignment is altered from the 1853 Bates map. Prior to 1867, Hospital Street, east of 5th Street, is shown to be oriented in a southeast-northwest direction, a linear extension of the orientation west of 5th Street. On this map it takes a more east-west orientation, creating an angle east of 5th Street. Additionally, this map seems to indicate topography of the approximate site area, showing a steep slope down to Bacon’s Quarter Branch.

DRAFT TIMELINE OF EVENTS: SITE 44HE1203

1877, Beers Map

F.W Beers' 1877 *Map of the City of Richmond* locates the Poor House/Alms House, Jewish Cemetery, Shockoe Hill Cemetery, the Colored Alms House, and the Grave Yard for Free People of Color and Slaves (noted as Potters Field, see Figure 6). Also, locates two powder magazines, one north of Hospital Street within Potters Field "Laflin & Rand Powder Co's Mag" and one south of Hospital Street "E.J. Dupont & Cos Powder Mag".

1879, Cemetery Records

Last reported burial activity recorded at 44HE1203 in June 1879, as published on January 1, 1880 in the *Richmond Dispatch* (S. Thompson to K. Barile and E. Stock, letter, 29 January 2019).

1883, 5th Street Improvements

On October 9, 1883 the *Daily Dispatch* reports “improvements at the extreme north end of Fifth Street” were unearthing “bodies buried in that locality” (S. Thompson to K. Barile and E. Stock, letter, 29 January 2019).

Note slope wash creating deep rills (drainage due to erosion of loose sediment) and excavated/cut notch already present in hillslope (blue arrow). Hospital Street location is obscured by the hillslope.

1889, Baist Atlas of Richmond

G. Wm. Baist's 1889 *Atlas of the city of Richmond Virginia. and vicinity; from actual surveys* locates Potters Field, Shockoe Hill Cemetery, both Alms Houses, and the Richmond Locomotive and Machine Works.

1890, 5th Street Viaduct

In 1890 the City Council passed an ordinance that would allow for the construction of a viaduct over Bacon's Branch, the ordinance stated "to erect a viaduct or bridge upon so much of the land belonging to the said City as would like in the extension of 5th Street, should the same be graded from its present northern termination." The ordinance suggests the grading evident in subsequent 1891 image of the area (Calhoun 2013).

1930s, 5th Street Viaduct Replacement

The 5th Street Viaduct was replaced with the Stonewall Jackson Bridge in the early 1930s (Calhoun 2013). An examination of historic topographic maps from this era suggested that Hospital Street was straightened/realigned again between 1895 and 1923.

1960, Property Ownership Transfer

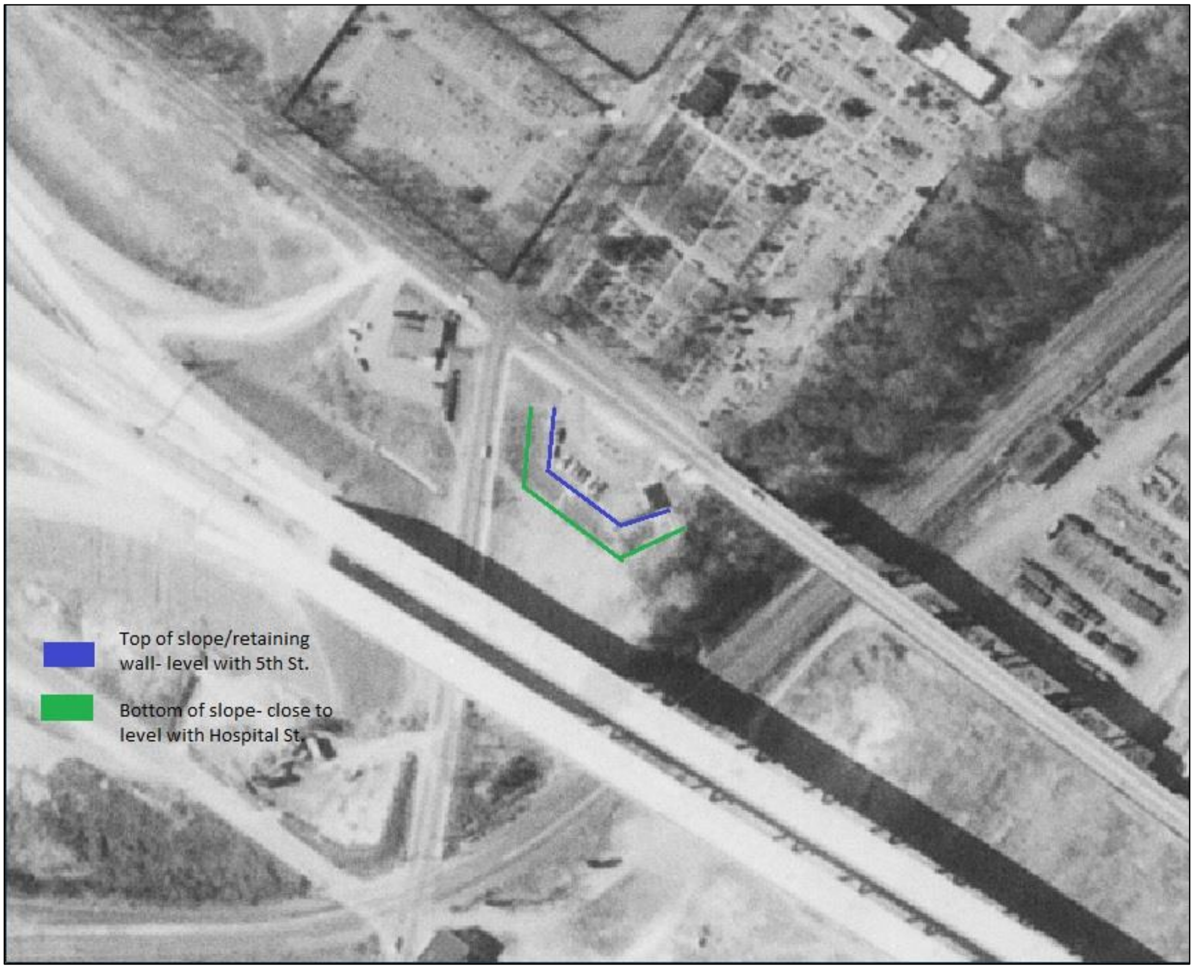
On March 29, 1960, the City of Richmond sold the parcel containing site 44HE1203 to the Sun Oil Company. Following this transfer a commercial building (service station) was constructed on the property (circa 1960), addressed at 1305 N. 5th Street (Calhoun 2013).

1960s, Interstate 64 Construction

Construction of the portion of Interstate 64 in the vicinity of site 44HE1203 was begun circa 1966 and was completed by 1968.

1968, Imagery

An examination of 1968 imagery indicates the area immediately surrounding the service station at 1305 N. 5th Street was filled during construction.



Top of slope/retaining wall- level with 5th St.
Bottom of slope- close to level with Hospital St.

Figure 17: 1968 Aerial Imagery of the Newly Constructed Service Station at 1305 N. 5th Street.

1981, Tallys Auto Shop Ownership

Walter L. and Leontyne Tally acquired the property at 1305 N. 5th Street (Calhoun 2013).

1990s, Stonewall Jackson Bridge Replacement

In the early 1990s the Stonewall Jackson Bridge was replaced with the current structure that carries 5th Street (Calhoun 2013).

2013, VDOT/CRA Study

Archaeological survey and geomorphological studies (detailed soil analysis) were conducted within VDOT's right-of-way (ROW), under the I-64 overpass. Perpendicular backhoe trenches across the ROW yielded no human remains or evidence of cultural features. The geomorphology analysis indicated near surface relic marine truncated subsoils (pre-human occupation) overlain by modern fill (Calhoun 2013). This indicates that existing soils in the area were stripped and removed from the area, exposing pre-human geologic layers, and modern fill was deposited over these sterile deposits.

Summary/Interpretations

The “Grave Yard for Free People of Color and Slaves” was undoubtedly located north of the nineteenth century iteration of Hospital Street, and presently in the northeast quadrant of the intersection of 5th Street and Hospital Street. It appears to have been in use from 1816 through 1879. The 1835 Bates map clearly identifies two sections within the cemetery, indicating that at least pre-1865 free people of color were interred in the western portion of the burial ground and that enslaved individuals were interred in the eastern portion, closer to Bacon’s Quarter Branch. By 1877 the boundaries of the cemetery were expanded to the north and west. Given the abundant historic evidence documenting the presence of this cemetery, the DC2RVA team sought to elevate this site from speculation in unpublished citations, by formally recording it with the Virginia Department of Historic Resources (DHR) in 2018.

Discussions regarding the DC2RVA project and site 44HE1203 have been ongoing since the spring of 2018. In order to better understand the history of the site landscape following the apparent 1879 abandonment of the cemetery, a variety of historic maps and images were examined by the DC2RVA team as part of Phase IB survey efforts, site avoidance dialogues, consulting party coordination, and the current discussion. The first event that likely impacted the site was the realignment of Hospital Street. Based on the map inspection, this occurred between 1856 and 1867. Michler’s 1867 map appears to be the first depiction of Hospital Street oriented east-west, as compared to the previous southeast-northwest direction. The 1866 establishment of a powder magazine north of Hospital Street also impacted, and yielded evidence for, the site location, as newspaper accounts documented the inadvertent discovery of human remains during its construction. It appears as if the eastern two-thirds of the site (as currently mapped/recorded with DHR) was removed in advance of the 1890 construction of the 5th Street Viaduct. The removal of this hillslope is evident when comparing the 1888 and 1891 Cook images presented above, but was also confirmed on the ground via a geomorphology assessment of the eastern portion of the site area by VDOT (Calhoun 2013). It is reasonable to assume that this removal greatly disturbed the portion of the cemetery marked “for slaves” on the 1835 Bates map. Furthermore, it appears that the western third of the site, marked “for free people of color” and closest to present day 5th Street, may have been spared from extensive grading in the 1890s. The eastern portion of the site was likely once again subjected to significant earthmoving activities when the 5th Street Viaduct was replaced in the 1930s, which also included a realignment of the portion of Hospital Street as it intersected Bacon’s Quarter Branch (as evidenced via the analysis of period topographic maps). Analysis of imagery from the 1960s, bracketing the construction of Interstate 64, indicates that the western portion of the site may have been filled and leveled in the 1960s.

The differential grading and treatment of the site landscape discussed above is also evident on the ground surface today by the extreme and unnatural elevation difference between the western/hilltop (where Tallys Autoshop was located) portion of the site and the eastern/excavated hillslope portion of the site (within the VDOT right-of-way under Interstate 64).

Recommendations

Based on this analysis, it appears that the western portion of site 44HE1203 (along 5th Street) has the potential to contain intact remains. There would be no impact from the DC2RVA project on this area, as there are no project improvements in this portion of the site. The potential for other non-DC2RVA project development in the future is unknown. Given the known history of burials and the potential for intact remains, any ground disturbing activities in this area would likely need to comply with existing State legislation on cemeteries and unmarked graves. The City of Richmond has indicated its intent to augment land records to reflect the presence of a historic cemetery in this area, adding an additional layer of protection.

The eastern two-thirds of site 44HE1203 has been notably disturbed repeatedly over the past 150 years, including substantial removal of material from the site. While the potential for intact burials is low based on these historic disturbances of this portion of the site, there is a chance for out-of-context human remains to be located in this area. In addition, this area has a significant history associated with the nineteenth-century African-American experience in Richmond. As such, although the FRA and DHR have determined that the project will have no adverse effect on the cemetery from the perspective of Section 106 of the National Historic Preservation Act, the following DC2RVA Project commitments are recommended to be performed as part of the National Environmental Policy Act compliance process:

> 1) A landscape analysis of site 44HE1203 and surrounding area will be completed to understand the chronology of area development. This landscape analysis will include, among other tasks, archival research, georeferenced overlays, a cut and fill analysis, and potentially 3D modeling of the data. The information will be gathered in a report and presented to the DHR, DRPT, Virginia Department of Transportation, City of Richmond, Historic Richmond Foundation, Preservation Virginia, and other vested groups interested in the history of this area for their use in future planning.
>
> 2) Once DC2RVA project designs in this area have reached 90 percent completion, archaeological testing will be completed in the revised limits of disturbance in the area of site 44HE1203 to examine the subsurface integrity and composition of these areas and ascertain the potential for intact burials. Should intact shafts or soils be noted, archaeological stripping of overburden may occur to delineate potential interments. If internments are identified, the project design will be re-evaluated and additional measures taken to avoid or minimize potential impacts to the internment area.
>
> 3) A Secretary of the Interior (SOI)-qualified archaeologist will be on site during all DC2RVA construction-related ground disturbing activities in this area to assure that no unanticipated/undiscovered archaeological or burial remains are encountered during ground-disturbing construction.

These commitments would be implemented during the Project's final design and construction phase, but prior to any Project-related ground disturbing activities.

Site 44HE1203/Grave Yard for Free People of Color and Slaves

Cultural Resource Commitments for DC2RVA Rail Project

The following commitments will be included in the Final Environmental Impact Statement (Final EIS) for the Washington, D.C. to Richmond segment of the Southeast High Speed Rail project (the Project) in association with the Grave Yard for Free People of Color and Slaves (archaeological site 44HE1203). The commitments are made to address stipulations set forth in the National Environmental Policy Act of 1969. Each commitment has been agreed to by the Virginia Department of Rail and Public Transportation (DRPT), and will be implemented, as appropriate, in the Project's design and construction phases. The Project will be designed and constructed in increments as funding becomes available; as each Project increment is funded and moves forward through design and construction, the commitments appropriate to that specific Project increment will also be implemented. In the event that the Project is turned over to another sponsor during construction, DRPT will continue to coordinate the following commitments with that sponsor and the appropriate federal, state, and local regulatory and managing agencies.

1) A landscape analysis of site 44HE1203 and surrounding area will be completed to understand the chronology of area development. This landscape analysis will include, among other tasks, archival research, oral histories with local historians and descendants, georeferenced overlays, a cut and fill analysis, and potentially 3D modeling of the data. Data to be gathered includes information on the history and development of the cemetery, post-interment impacts, and comments on the memorialization and interpretation of the site. The landscape analysis will be documented in a report and presented to the Virginia Department of Historic Resources (DHR), DRPT, Virginia Department of Transportation, City of Richmond, Historic Richmond Foundation, Preservation Virginia, and other vested groups interested in the history of this area for their use in future planning. Concurrently, the resource boundaries and National Register of Historic Places eligibility of site 44HE1203 will be reevaluated through consultation with the DHR using the newly acquired data.

2) Once DC2RVA project designs in this area have reached 90 percent completion, archaeological testing will be completed in the revised limits of disturbance in the area of site 44HE1203 to examine the subsurface integrity and composition of these areas and ascertain the potential for intact burials. Should intact shafts or soils be noted, archaeological stripping of overburden may occur to delineate potential interments. If internments are identified, the project design will be re-evaluated and additional measures taken to avoid or minimize potential impacts to the internment area.

3) A Secretary of the Interior (SOI)-qualified archaeologist will be on site during all DC2RVA construction-related ground disturbing activities in this area to assure that no unanticipated/undiscovered archaeological or burial remains are encountered during ground-disturbing construction. In the event that remains are encountered, construction would stop and the DHR will be contacted to evaluate next steps.

CITY OF RICHMOND
DEPARTMENT OF PUBLIC WORKS

CONCURRENCE WITH FRA DETERMINATION OF SECTION 4(f) *DE MINIMIS* IMPACTS AND TEMPORARY OCCUPANCY OF DC2RVA PROJECT ON THE WALKER'S CREEK RETENTION BASIN PARK

The City of Richmond, Department of Public Works has reviewed the information for the Virginia Department of Rail and Public Transportation's (DRPT) proposed construction associated improvements on a portion of the City of Richmond's Walker's Creek Retention Basin Park. Additionally, the Department of Planning and Development Review has reviewed the project information in relation to planning efforts centered on Manchester Canal and Walker's Creek that are not yet realized opportunities for accessible water frontage, for the City. Adopted in 2012, the Richmond Riverfront Plan (pg. 44), has allowed for new projects in this area to come forward, creating an opportunity to enhance the Manchester Canal/Walker's Creek, as public open space. The proposed project does not appear to have any negative effect on the long-term prospects for the area. Based on the information, the City of Richmond, Department of Public Works, with input from the Department of Planning & Development Review, the Department of Public Utilities and the Department of Parks and Recreation, concur that the proposed use of park land by the project would not adversely affect activities, features, and attributes of the Walker's Creek Retention Basin Park. This concurrence does not constitute an endorsement of the project or conveyance of any temporary or permanent interests in or access to park lands. Further, this concurrence is provided with the understanding that DRPT will continue to coordinate with the City of Richmond, Department of Public Works during project development and that further consultation will be undertaken by DRPT to ensure prior to granting of any temporary or permanent property interests that harm to the Walker's Creek Retention Basin Park by the proposed project has been minimized and the conditions upon which this concurrence is based have not changed.

Dear Emily:

Re: Concurrence with FRA Determination of Temporary Occupancy of DC2RVA Project on the Mattaponi Wildlife Management Area

The Virginia Department of Game and Inland Fisheries (VADGIF) has reviewed the information for the Virginia Department of Rail and Public Transportation's (DRPT) proposed construction associated improvements on a portion of the Virginia Department of Game and Inland Fisheries' Mattaponi Wildlife Management Area. Additionally, since this property was purchased using dedicated federal trust funds via the Federal Aid in Wildlife Restoration Program (Pittman-Robertson Act), we have checked with the U.S. Fish and Wildlife Service to receive their concurrence that your proposed construction would not interfere with, or cause us to relinquish control of the property.

Based on our review of the information that you have provided and agreement from the Service, the Virginia Department of Game and Inland Fisheries concurs that the proposed temporary occupancy of this small parcel by the project would not adversely affect activities, features, and attributes of the Mattaponi Wildlife Management Area.

This concurrence does not constitute an endorsement of the project or conveyance of any temporary or permanent interests in or access to the Wildlife Management Area beyond the area specified in your request. Further, this concurrence is provided with the understanding that DRPT will continue to coordinate with our Department during project design and that we will have the opportunity to review final plans before granting temporary access to the proposed project area.

Sincerely,

David K. Whitehurst
Director, Bureau of Wildlife Resources

Based on the information, the Arlington County Department of Parks and Recreation concurs that the proposed temporary occupancy of park land by the project would not adversely affect activities, features, and attributes of Long Bridge Park. This concurrence does not constitute an endorsement of the project or conveyance of any temporary or permanent interests in or access to park lands. Further, this concurrence is provided with the understanding that DRPT will continue to coordinate with the Arlington County Department of Parks and Recreation during project development and that further consultation will be undertaken by DRPT to ensure prior to granting of any temporary or permanent property interests that harm to the Long Bridge Park by the proposed project has been minimized and the conditions upon which this concurrence is based have not changed.

APPENDIX F
REFINED OPERATIONS ANALYSIS MODELING TECHNICAL MEMOS

D.C. TO RICHMOND SOUTHEAST HIGH SPEED RAIL

MEMO

Date:	November 7, 2017
To:	Virginia Department of Rail and Public Transportation
From:	DC2RVA Project Team
Subject:	Results of DRPT's Refined Operations Analysis to Satisfy FRA Requests and Enable FRA Support for Issuance of the DC2RVA Project Tier II Draft Environmental Statement

1.0 SUMMARY

This report describes the approach, assumptions, and results of a refined operations analysis undertaken by the Virginia Department of Rail and Public Transportation (DRPT) for the Federal Railroad Administration (FRA) in support of the Washington, D.C. to Richmond Southeast High Speed Rail Tier II Environmental Impact Statement and Service Development Plan (the DC2RVA Project). Table 1 contains a summary of the modeling results from the refined operations analysis simulations undertaken by DRPT (see table on page 2).

2.0 BACKGROUND AND PURPOSE

The DCRVA Project proposes to increase track capacity between Arlington, Richmond, and Centralia, Virginia, to improve passenger rail service frequency, reliability, and travel time in a corridor shared by increasing volumes of passenger, commuter, and freight rail traffic. The DC2RVA Project is part of the larger Southeast High Speed Rail (SEHSR) corridor, which extends from Washington, D.C. through Richmond and continues east to Hampton Roads (Norfolk and Newport News), VA and south to Raleigh, NC, and Charlotte, NC, and then continues west to Atlanta and south to Florida. The DC2RVA Project connects to the National Railroad Passenger Corporation (Amtrak) Northeast Corridor (NEC) at Union Station in Washington, D.C.

Table 1: Summary of Modeling Results from the Refined Operations Analysis Simulation

Case	DC2RVA 2045 NO BUILD	DC2RVA 2045 BUILD	DC2RVA 2045 BUILD 2ASH	DC2RVA 2045 BUILD 2ASH + TOS	DC2RVA 2045 BUILD XR2

Freight Train Minutes of Delay per 100 Train-Miles					
All Freight Trains	30.8	24.8	28.4	31.2	42.2

The intent of this refined operations analysis was to use operations simulations (also known as operations modeling) to estimate the operational performance of passenger, freight, and commuter trains in the corridor under four different "build case" operations simulations identified by FRA and DRPT, as well as a No Build case to which the four build case simulations would be compared. The four build cases to be tested under this refined operations analysis include a three-track infrastructure alternative previously analyzed for the Tier II Draft Environmental Impact Statement (DEIS) for the DC2RVA Project, as well as three other infrastructure alternatives proposed by DRPT in a letter dated April 4, 2017, and agreed to by FRA in a letter dated April 7, 2017. This refined analysis builds upon operations simulation modeling work previously done by DRPT for the DC2RVA Project using the Rail Traffic Controller (RTC) model for the full length of the DC2RVA corridor from Washington, D.C. through Centralia, VA.

In a letter to DRPT dated March 27, 2017, FRA proposed the process for undertaking a refined operations analysis to support the forthcoming publication of the Tier II Draft Environmental Impact Statement for the DC2RVA Project. The March 27 letter from FRA identified four items for limited re-analysis:

- Revisions to the proposed DC2RVA corridor track infrastructure at specific locations identified by FRA. These revisions are detailed in Section 2.2 of this report.
- Development of a representative station platform (i.e., track) assignment plan for intercity passenger trains and commuter trains. The platform assignment plan is discussed in Section 2.3 of this report.
- Incorporation of the platform assignment plan into the operations simulation work undertaken in this analysis through adjustments to the RTC programming logic. The track assignment plan assessed in this refined operations analysis is discussed in Section 2.3 of this report.
- Inclusion of a constrained operating environment case that assesses the performance impact of track outages and maintenance windows. The representation of maintenance work developed for this refined operations analysis is discussed in Section 3 of this report.

In all operations simulation cases undertaken as part of this refined operations analysis, the infrastructure alternatives were tested for proposed operations in the year 2045, which represents the concluding year of a 20-year horizon for the Project, based on the Project's proposed implementation year of 2025.

The performance estimates produced by the operations simulation for each infrastructure alternative have been benchmarked against performance goals for freight and passenger trains that were established by FRA under the Passenger Rail Investment and Improvement Act (PRIIA), notably a passenger train on-time performance goal of 90% for both end-to-end and all-stations operations.

Operations simulation cases where performance estimates generated by the operations simulation software exceed the established goals will be considered confirmation that the infrastructure alternative assessed in that case will adequately support the level of passenger, commuter, and freight service presented in the forthcoming DC2RVA DEIS, and that the infrastructure alternative assessed is sufficient to deliver the DC2RVA Project's proposed 2045 full-build service plan with intercity passenger trains operating up to 90 mph with an "all stations" and "end-to-end" on-time performance goal of 90%, while sustaining planned growth in freight and commuter service through 2045.

This report describes the draft results of the refined operations analysis. The operations simulation portion of these results will require additional analysis.

3.0 ASSUMPTIONS AND PARAMETERS

The refined operations analysis work was conducted between April 17, 2017 and June 7, 2017. The work was conducted using a methodology, assumptions, and parameters outlined in "Change Order Request CR-0007 – Additional Operations Simulation Modeling (v2) to Satisfy FRA Requests," dated April 11, 2017. DRPT issued a Notice to Proceed with this work on April 17, 2017.

The most significant aspects of the operations simulation methodology, assumptions, and parameters outlined in the Change Order of April 11, 2017 are outlined below, some of which represent changes from the way previous DC2RVA Project operations simulation work was conducted under the DC2RVA Operations Modeling Methodology report dated January 2016.

3.1 Simulation Year

FRA-funded passenger rail projects require that operations analysis (and specifically operations simulation) demonstrate that the proposed project is sufficient to increase capacity to deliver the proposed passenger rail service and accommodate growth of freight rail service in an efficient and reliable multimodal rail corridor over a typical 20-year time horizon following the completion of the passenger project.

The operations simulations performed for all cases in this refined operations analysis were run for the simulation year of 2045. 2045 is the concluding year of the DC2RVA Project's 20-year planning horizon, based on the Project's proposed implementation year of 2025.

3.2 Infrastructure Assumptions

In FRA's letter to DRPT on March 27, 2017, FRA requested that specific modifications be made to the proposed DC2RVA track infrastructure and assessed as part of the refined operations analysis work. Subsequent calls and discussion between FRA and DRPT, specifically correspondence between FRA and DRPT dated April 26, 2017 and May 4, 2017, provided further clarification and revisions to the initial request made in the March 27, 2017.

The infrastructure modifications listed below represent all of the changes agreed to by FRA and DRPT, which were incorporated into the refined operations analysis work under DRPT's Change Order Request of April 11 and subsequent correspondence dated April 26, 2017 and May 4, 2017.

- The RO interlocking (milepost CFP 110.1) was modified from a full universal interlocking to a one-way interlocking providing access to all four mainline tracks only for northbound trains crossing from the westernmost track (Main Track 3) to the easternmost track (Main Track 0). Full universal access between main tracks 1, 2, and 3 was also provided at the RO interlocking.

- The Slaters Lane interlocking (milepost CFP 106.3) was modified from a full universal interlocking to a one-way interlocking providing access to all four mainline tracks only for southbound trains crossing from the westernmost track (Main Track 3) to the easternmost track (Main Track 0). Full universal access between main tracks 0 and 1 only, and full universal access between main tracks 2 and 3 only was also provided at the Slaters Lane interlocking.
- The Ravensworth interlocking (milepost CFP 97.3) was modified to provide full universal access to all tracks.
- The Crossroads interlocking (milepost CFP 53.2) was modified to provide full universal access to all tracks.
- A new 15,000-foot siding was added south of Fredericksburg to allow for the staging of freight trains mid-corridor during the VRE commuting period. This siding was added on the west side of the corridor, parallel to main track 3. The north end of the siding is accessed from main track 3 at a point just south of the Lansdowne Road grade crossing (approximately milepost CFP 57.44) and the south end of the siding is accessed from main track 3 just north of the Massaponax Creek bridge (approximately milepost CFP 54.47).
- The Elmont interlocking (milepost CFP 11.4) was modified to provide full universal access to all tracks.
- The Acca Yard East Bypass passenger tracks were extended farther north to milepost CFP 6.0 to accommodate the staging of full-length freight trains north of the North Acca interlocking (milepost CFP 3.4).
- The relocated Staples Mill Road passenger rail station (milepost CFP 4.6) was modified to reduce the number of platform tracks from four to three tracks.
- The track configuration of the Staples Mill Road Station was modified to allow for the platform tracks to be dedicated station tracks served by high-level platforms. This design prevents freight trains from use of the Staples Mill Road Station platform tracks. As a result, a new universal interlocking and connection between the Acca Yard East Bypass passenger tracks and an adjacent CSXT Acca Yard lead track was added south of the Staples Mill Road Station, at approximately milepost CFP 3.8, to allow for interoperability on the Acca Yard East Bypass passenger tracks.
- The Hermitage interlocking on the S-Line (milepost SRN 3.5) was modified to provide universal access to the two center main track and eastern main track of the three track S-Line, which become the East Acca Bypass passenger tracks, and also to provide access to and from Acca Yard for freight trains on the center main track and western main track of the three-track S-Line.
- Intermediate crossovers on the S-Line were removed in the vicinity of Lombardy Street (milepost SRN 2.9) and North Belvidere Street (milepost SRN 2.2).
- AM Junction interlocking in Richmond (milepost SRN 0.7) was modified to permit direct non-diverging moves by freight trains operating northward on the S-Line between Fulton and Acca Yards.

The track changes made in the RTC model also include subsequent modifications to the DC2RVA infrastructure requested by FRA during a June 9, 2017, meeting with DRPT.

3.3 Service Assumptions

3.3.1 DC2RVA Service Plan

The service plan tested in this refined operations analysis was the proposed DC2RVA Staples Mill/Main Street Station "Full Service" option, wherein Regional, Interstate Corridor, and Long Distance intercity passenger trains make station stops at both Richmond Staples Mill Road Station and Richmond Main Street Station. This service plan incorporates the nine additional roundtrip intercity passenger trains proposed by the DC2RVA Project, which will operate in addition to the ten existing roundtrip intercity passenger trains currently providing service in the corridor.

Access between the two Richmond stations is provided by the Project's proposed East Acca Bypass passenger tracks. The Amtrak Auto Train would continue to operate as a nonstop service that does not make stops at either station. The Auto Train was modeled using its current route along CSXT's A-Line between Richmond and Centralia.

In the operations simulations undertaken, Regional trains serving Richmond's Main Street Station bound to and from Newport News used the station's east side platform tracks, which provide the sole access to CSXT's Peninsula Subdivision linking Richmond and Newport News. Regional trains bound to and from Norfolk and all Interstate Corridor and Long Distance passenger trains used the station's west side platform tracks, which are part of the CSXT S-Line linking Richmond and Centralia, VA, the southern end of the DC2RVA Project limits and the junction with CSXT's A-Line. The one roundtrip Regional train that originates/terminates at Main Street Station and lays over at the Brown Street Yard also used the west side platform tracks.

3.3.2 Maximum Speed

The maximum authorized speed of intercity passenger trains was 90 mph, where feasible.

3.3.3 Freight and Commuter Operations Modeled

The refined operations analysis includes the operation of freight trains and VRE commuter trains. Freight growth was projected using the existing CSXT growth methodology to year 2045.

The 38 VRE commuter trains (19 round trips) taken into account by the DC2RVA Project also were modeled, using schedules provided by VRE for the DC2RVA Project operations simulation work.

To further ensure representational operation of VRE commuter trains in the refined operations analysis work, a station dwell time of 90 seconds for VRE station stops was programmed into the RTC software. The station dwell time used was provided by VRE.

3.3.4 Operations Plan: Platform Assignment Plan

For the refined operations analysis, a representative station platform assignment plan for intercity passenger trains and commuter trains was developed at FRA's request that assigned each commuter train and passenger train to a specific platform at station stops. This plan was developed to provide a consistent, predictable pattern of station platform usage for Amtrak intercity passenger trains and VRE commuter trains, to aid in passenger convenience when boarding trains.

Settings selected in the RTC software instructed the software to incorporate the platform assignment plan into each operations simulation case. The platform assignment plan defines the primary platform assignments for intercity passenger trains and VRE commuter trains during the morning and evening peak commuter periods, when corridor train volumes are predicted to be at their heaviest.

The platform assignment plan devised for this refined operations analysis encompasses the entire D2RVA corridor, from Washington through Spotsylvania and Richmond, to Centralia, for the morning and evening peak commuter periods. Figures 1 and 2 below show the platform assignment plan, which incorporates several minor modifications that were requested by FRA during a meeting with DRPT on June 9, 2017. Figure 1 shows the corridor's northern half, between Washington and Spotsylvania, and Figure 2 shows the corridor's southern half, between Spotsylvania and Centralia.

In the platform assignment plan used for the morning peak commuter period, VRE commuter trains used Main Track 1 (the easternmost track) between Crossroads and Dahlgren Junction and Main Track 3 (the westernmost track) between Dahlgren Junction and CP Virginia in Washington, D.C. Manassas Line VRE trains joining the corridor at AF interlocking in Alexandria also used Track 3 north to CP Virginia. Northbound intercity passenger trains and freight trains used Main Track 1 between Crossroads and CP Virginia, although Main Track 3 was utilized as an alternate track for northbound passenger trains, provided VRE trains were not delayed. Southbound intercity passenger trains and freight trains used Main Track 2 between CP Virginia and Spotsylvania.

In the platform assignment plan used for the evening peak commuter period, VRE commuter trains used Main Track 3 between CP Virginia and Dahlgren Junction and Main Track 1 between Dahlgren Junction and Crossroads. Manassas Line VRE trains also used Track 3 from CP Virginia to AF interlocking in Alexandria where they departed the corridor toward Manassas. Southbound intercity passenger trains also used Track 3 between CP Virginia and Crossroads, although Main Track 2 was utilized as an alternate track for southbound passenger trains when conflicts with freight trains could be minimized. Southbound freight trains used Main Track 2. Northbound intercity passenger trains and freight trains used Main Track 1 between CP Virginia and Spotsylvania.

In the Richmond area, the platform assignment plan for the two Richmond stations during both the morning and evening peak periods allows for passenger trains operating on the S-Line between Staples Mill Road and AM Junction (near Main Street Station) to operate on the two eastern tracks of the three-main-track S-Line, which provides a direct, non-diverging route for passenger trains between the S-Line and the Acca Yard East Bypass passenger tracks. Northbound freight trains from Fulton Yard operating on the S-Line to Acca Yard make a direct, non-diverging move through AM Junction to reach the westernmost of the S-Line's three main tracks, which provides a direct, non-diverging northward route to Acca Yard.

3.3.5 Operations Plan: Revised Operations Analysis Conceptual Schedule

Passenger train running times and recovery times between Washington Union Station and Petersburg Station in the refined operations analysis were modified from the initial DC2RVA conceptual schedule included in the DEIS to enable trains to achieve an all-stations and end-to-end on-time performance at a sufficient margin above 90%, such that the performance could be considered likely to be achieved in normal real-world operation of the DC2RVA corridor under the revised corridor infrastructure and platform assignment plan described above. It is important to note that an on-time performance of 90% represents a significant improvement over the existing realized passenger train on-time performance of 66% in the corridor.

Schedules were not modified uniformly, but rather adjusted on a train-by-train basis in consideration of the regularly expected operating conditions within the corridor at that time of day (i.e., peak commuter periods). Table 2 provides the range of travel times modeled in the refined operations analysis and the time savings achieved by intercity passenger trains in comparison with travel times in 2017.

In addition, the passenger train schedules in the refined operations analysis were further modified to incorporate an increase in station dwell times at Alexandria Station to 5 minutes for all northbound Amtrak long-distance trains to account for the possibility of a double stop at the short platform serving Main Tracks 2 and 1.

Table 2: Summary of Travel Time Adjustments made to DC2RVA Refined Operations Timetable, in comparison with DC2RVA DEIS Conceptual Schedule

Train	Long Distance	Long Distance	Interstate Corridor	Interstate Corridor	Regional	Regional
Direction	**South**	**North**	**South**	**North**	**South**	**North**
Washington to Richmond Staples Mill Road Station						
DC2RVA FRA Refined Operations Travel Times (hours:minutes)	1:59-2:04	2:15-2:34	1:55-2:05	2:05-2:12	2:05-2:21	2:06-2:25
Median Travel Time Savings Compared with June 2017 schedule (minutes)	5	4	14	8.5	11	9.5
Washington to Richmond Main Street Station						
DC2RVA FRA Refined Operations Travel Times (hours:minutes)	2:32-2:37	2:50-3:04	2:21-2:31	2:30-2:45	2:26-2:44	2:34-2:53
Median Travel Time Savings Compared with June 2017 schedule (minutes)	n/a	n/a	n/a	n/a	10	21

*Travel time reductions are the median of the reductions experienced by individual trains.

3.3.6 Performance Metrics and Thresholds

The performance of passenger trains and commuter trains in the refined operations analysis was measured against on-time performance standards for intercity passenger rail service developed by FRA and Amtrak in accordance with Section 207 of the Passenger Rail Investment and Improvement Act (PRIIA). In all cases, passenger trains tested in the operations simulation were assumed to arrive into the modeled territory not more than 15 minutes late, using a triangular distribution of late departure from Washington Union Station or late arrival at Petersburg.

On-time performance for passenger and commuter trains was measured as follows:

- End-to-end (endpoint) on-time performance was measured between Washington Union Station in Washington, D.C. and Petersburg Station, VA, for passenger trains operating between Washington and Norfolk, North Carolina, or Georgia/Florida. Endpoint on-time performance was measured between Washington Union Station and Richmond Main Street Station for passenger trains operating between Washington and Newport News or Richmond. Endpoint on-time performance was measured between Washington Union Station and Spotsylvania station for VRE commuter trains. Endpoint on-time performance was measured as the percentage of times a train arrived at its endpoint terminal more than 10 minutes after its scheduled arrival time. The endpoint on-time performance threshold for passenger trains and commuter trains in the model was 90%.
- All-Stations on-time performance was measured at all station stops for all passenger and commuter trains using the DC2RVA corridor between Washington Union Station and Petersburg Station. All-Stations on-time performance was measured as the percentage of times a train departed from its origin station or arrived at all other stations within 15 minutes of its scheduled time. The All-Stations on-time performance threshold for passenger trains and commuter trains in the model was 90%.

Endpoint and All-Stations on-time performance was measured for four different passenger train types:

- Amtrak Long Distance
- Amtrak Regional and Interstate Corridor
- All Amtrak Trains Aggregated
- Virginia Railway Express

The performance of freight trains in the refined operations analysis was measured as follows:

- Freight train performance was measured between CP Virginia in Washington, D.C., and Centralia, VA as minutes of freight train delay per 100 train-miles.

4.0 OPERATIONS SIMULATION CASES

Four operations simulation Build cases were tested utilizing the DRPT recommended corridor alternative that provides Full Service to both Richmond Staples Mill Road and Main Street Stations. The four cases were modeled for the Year 2045 Full-Build (Horizon Year) incorporating the additional infrastructure changes, service changes, assumptions, and parameters described in Section 3.

All of the operations simulation cases performed for the refined operations analysis were conducted in the same modeled territory, from CP Virginia in Washington, D.C. to Petersburg, VA. Changes in infrastructure tested in each case are described below. All cases had a common track configuration between Richmond Staples Mill Road Station and Petersburg, VA, including two main tracks along the S-Line across the James River. All cases were dispatched with the infrastructure modifications described in Section 3.2 and documented in the Version 9 track schematics included with this report. The only exceptions to the use of a common infrastructure in this operations analysis are described below, when a simulation case required a specific modification to the common infrastructure.

The following cases were developed and tested.

No Build 2045. This case measures performance on the DC2RVA corridor with the No Build infrastructure, as described in the DC2RVA DEIS, and does not include the new intercity passenger trains proposed by the DC2RVA Project.

Build 2045. This Build case measures performance on the DC2RVA corridor with three main tracks from Alexandria to Richmond Staples Mill Road Station. This case includes the new intercity passenger trains proposed by the DC2RVA Project.

Build 2045, 2 tracks Ashland. This Build case measures performance on the DC2RVA corridor with three main tracks from Alexandria to Richmond Staples Mill Road Station with the exception of a two-track segment through Ashland. The northern and southern limits of the two-main-track section through Ashland encompass a distance of approximately 2.01 miles, from a proposed interlocking north of Vaughan Road at milepost CFP 15.75 to a proposed interlocking south of Ashcake Road at milepost CFP 13.74. This case includes the new intercity passenger trains proposed by the DC2RVA Project. This case is programmatically a component of the Service Development Plan, but was brought forward to this refined operations analysis to satisfy FRA requests for operations simulation modeling that would support FRA’s issuance of the DEIS.

Build 2045, 2 tracks Ashland + MOW Outage. This Build case measures performance on the DC2RVA corridor with three main tracks from Alexandria to Richmond Staples Mill Road Station with the exception of a two-track segment through Ashland, plus a randomly selected additional two-track segment of approximately 10 miles in length between Alexandria and Crossroads, in order to test the response of the network to a simulated maintenance-of-way outage. In this case, the two-main-track section through Ashland was identical to the one used in Case 2. In addition, a track outage was added to the corridor on Main Track 2 between North Possum Point (CFP 81.3) and Arkendale (CFP 72.1), a distance of 9.2 miles. This outage restricted trains from using Main Track 2 for a period of 7 hours, from 9:00 a.m. to 4:00 p.m., for all of the days modeled. This case includes the new intercity passenger trains proposed by the DC2RVA Project. This case is programmatically a component of the Service Development Plan, but was brought forward to this refined operations analysis to satisfy FRA requests for operations simulation modeling that would support FRA’s issuance of the DEIS.

Build 2045, 2 tracks only Crossroads-Greendale. This Build case measures performance on the DC2RVA corridor with three main tracks from Alexandria to Crossroads, and two main tracks from Crossroads to Richmond Staples Mill Road Station. This case includes the new intercity passenger trains proposed by the DC2RVA Project. This case was not programmatically a component of the Service Development Plan, and has not been previously identified, but was incorporated in this refined operations analysis to satisfy FRA requests for operations simulation modeling that would support FRA’s issuance of the DEIS.

5.0 DELIVERABLES

The deliverables for the refined operations analysis consist of the following elements, as specified in Change Order Request CR-0007 – Additional Operations Simulation Modeling (v2) to Satisfy FRA Requests, dated April 11, 2017:

1. Passenger train endpoint on-time performance data for each case, as measured at Washington Union Station, Petersburg Station (for trains headed to/from Norfolk, North Carolina, Georgia, and Florida) and Richmond Main Street Station (for trains headed to/from Newport News and Richmond). This data is presented in Section 6.0.
2. Passenger train all stations on-time performance data for each case, as measured at passenger rail stations on the DC2RVA corridor between Washington Union Station and Petersburg Station. This data is presented in Section 6.0.
3. Freight train delay per 100 train miles data for each case, measured in the DC2RVA corridor only. This data is presented in Section 6.0.
4. Modified passenger train schedules modeled in the refined operations analysis.
5. A schematic depiction of the infrastructure modeled in the refined operations analysis.
6. A platform assignment plan. This plan was presented in Section 3.3.5.
7. An operations plan describing the platform assignments for each train, and the modified timetable. This operations plan is described in Section 3.3.4 and 3.3.5.

6.0 RESULTS

This section presents the results of the operations simulations for the refined operations analysis. The metrics that are reported are as follows:

For passenger trains:

- On-Time Performance by train type. The train types measured were:
  - Amtrak Long-Distance
  - Amtrak Regional and Interstate Corridor
  - All Amtrak Trains Aggregated
  - Virginia Railway Express

- Passenger train On-Time Performance is reported by endpoint and at all station stops

For freight trains:

- Minutes of Delay per 100 Train-Miles

Minutes of Delay per 100 Freight Train-Miles is calculated by the RTC operations simulation model as follows:

- Adding all of the train miles of all of the trains that operate during the model's statistical capture period
- Adding all of the minutes of delay of all of the trains that operate during the model's statistical capture period
- Dividing the total delay by total train miles divided by 100.
- Displayed as a formula:

$$\frac{\Sigma \text{ Delay}}{\Sigma \text{ Train Miles}/100}$$

- Delay for each freight train that operates during the model's statistical capture period is calculated by the RTC model as the difference between the run time of each freight train in an unimpeded case and each train's actual run time in the model.

The results achieved to date are summarized below for each of the cases in the refined operations analysis.

- Passenger train On-Time Performance in all cases except the No Build 2045 case exceeds 90% for both end-point and all-stations measurements.
- Freight train minutes of delay per 100 train-miles for the Build 2045 and Build 2045 2 tracks Ashland are less than freight train minutes of delay per 100 train-miles for the No Build 2045 case.
- Freight train minutes of delay per 100 train-miles for the Build 2045 2 tracks Ashland + MOW Outage case and the Build 2045 2 tracks Crossroads-Greendale case are more than freight train minutes of delay per 100-train miles for the No Build 2045 case.

During the Service Development Plan phase of the DC2RVA project, additional seeds of operations simulation cases for the preferred alternative will be dispatched to fulfill randomization requirements described in the DC2RVA Operations Modeling Methodology report dated January 2016.

No Build 2045

Passenger Train End-Point On-Time Performance

- Amtrak Long-Distance – 69.6
- Amtrak Regional and Interstate Corridor – 76.9
- All Amtrak trains aggregated – 73.3

MEMO

Date:	November 7, 2017
To:	Virginia Department of Rail and Public Transportation
From:	DC2RVA Project Team
Subject:	Results of Network-Wide Refined Operations Analysis Modeling to Estimate Potential Freight Delay Outside the DC2RVA Corridor

1.0 SUMMARY

This memorandum describes the results of a Network-Wide Refined Operations Analysis to Estimate Potential Freight Delay Outside the DC2RVA Corridor (Network-Wide Analysis) undertaken by the Virginia Department of Rail and Public Transportation (DRPT). This additional operations analysis was conducted to help inform DRPT's work on the Washington, D.C. to Richmond Southeast High Speed Rail Tier II Environmental Impact Statement and Service Development Plan (the DC2RVA Project) by estimating the potential for freight train delays outside of the DC2RVA corridor that could be attributable to the increases in passenger train frequency proposed by the DC2RVA Project.

Table 1 contains a summary of the modeling results from the Network-Wide Analysis operations simulations undertaken by DRPT.

2.0 BACKGROUND AND PURPOSE

The DCRVA Project proposes to increase track capacity between Arlington and Centralia, Virginia, to improve passenger rail service frequency, reliability, and travel time in a corridor shared by increasing volumes of passenger, commuter, and freight rail traffic. The DC2RVA Project, undertaken by DRPT in cooperation with the Federal Railroad Administration (FRA), is part of the larger Southeast High Speed Rail (SEHSR) corridor, which extends from Washington, D.C. through Richmond and continues east to Hampton Roads (Norfolk and Newport News), VA and south to Raleigh, NC, and Charlotte, NC, and then continues west to Atlanta and south to Florida. The DC2RVA Project connects to the National Railroad Passenger Corporation (Amtrak) Northeast Corridor (NEC) at Union Station in Washington, D.C.

Federal requirements established under the Passenger Rail Investment and Improvement Act of 2008 (PRIIA) set performance requirements for federally supported passenger rail projects such as DC2RVA:

- Intercity passenger trains must achieve a 90 percent or better on-time performance, on average, every day.
- The Project cannot unreasonably impact existing and anticipated future freight and commuter trains.

These requirements must be met for 20 years from the day the project is implemented. For planning purposes, DRPT has assumed that the DC2RVA Project would be implemented in 2025, and therefore the PRIIA performance requirements must be met through 2045.

The intent of DRPT's additional Network-Wide Analysis was to use operations simulations (also known as operations modeling) to estimate the potential for freight train delays both within and beyond the DC2RVA corridor (i.e., "network-wide" delays) in the year 2045 that could be attributable to the increases in passenger train frequency proposed by the DC2RVA Project. This work was carried out by measuring the operational performance of CSXT freight trains throughout the DC2RVA Project's "modeled territory" (described below in Section 3.1) as well as passenger and commuter trains that use the DC2RVA corridor. Operational performance was measured under four different "build case" operations simulations previously agreed upon in past Refined Operations Analysis work conducted by DRPT for FRA, as well as a No Build case to which the four build case simulations would be compared. The five cases modeled in the Network-Wide Analysis consist of:

- **DC2RVA 2045 No Build**: The DC2RVA corridor infrastructure in this case consists of the No Build infrastructure identified in the DC2RVA DEIS.
- **DC2RVA 2045 Build**: The DC2RVA corridor infrastructure in this case consists of three main tracks from Alexandria to Richmond Staples Mill Road.
- **DC2RVA 2045 Build, 2 tracks Ashland**: The DC2RVA corridor infrastructure in this case has been identified in other documents as "3-2-3" and consists of three main tracks from Ashland to Richmond Staples Mill Road, except at Ashland, will have two main tracks.
- **DC2RVA 2045 Build, 2 tracks Ashland + Track Out of Service North (MOW Outage)**: The DC2RVA corridor infrastructure in this case consists of three main tracks from Alexandria to Richmond Staples Mill Road, except at Ashland, which would have two main tracks, and a randomly selected additional segment of approximately 10 miles in length between Alexandria and Crossroads representing a daytime maintenance-of-way outage, which would have two main tracks during the maintenance-of-way outage and three main tracks at other times.

- **DC2RVA 2045 Build, 2 tracks south of Crossroads**: The DC2RVA corridor infrastructure in this case consists of three main tracks from Alexandria to Crossroads, and two main tracks from Crossroads to Richmond Staples Mill Road.

Section 4.0 contains full descriptions of all cases modeled in the Network-Wide Analysis. For this work, "network-wide" performance estimates were defined as performance estimates of trains operating within the modeled territory described in Section 3.1. The four build cases tested in the Network-Wide Analysis simulations included a three-track infrastructure alternative previously analyzed for the Tier II Draft Environmental Impact Statement (DEIS) for the DC2RVA Project, as well as three other infrastructure alternatives that were identical to those developed for previous FRA Refined Operation Analysis simulations carried out between April and June of 2017 and described in a memo to FRA dated June 9, 2017 titled "Draft Results of DRPT's Refined Operations Analysis to Satisfy FRA Requests and Enable FRA Support for Issuance of the DC2RVA Project Tier II Draft Environmental Statement".

In the previous operations simulations work done for FRA, as summarized in the June 9, 2017, draft results report, freight train performance impacts were estimated within the 123-mile DC2RVA project area between Control Point RO in Arlington, VA (CSXT milepost CFP 110) and Centralia, VA (CSXT milepost A 11). Performance impacts were also assessed along a contiguous segment of the CSXT mainline rail corridor adjacent to and south of the DC2RVA Project Area between Centralia and Petersburg, VA (CSXT milepost A 22), as well as a contiguous segment of the CSXT mainline rail corridor adjacent to and north of the DC2RVA Project Area between Arlington, VA and Control Point Virginia in Washington, D.C. (CSXT milepost CFP 112.2) (See Figure 1.)

In the additional Network-Wide Analysis conducted by DRPT, freight train performance impacts were estimated across the larger "modeled territory," which included not only all of the trackage in the DC2RVA Project Area, but all of the trackage in the DC2RVA Modeling Limits, as defined in the "D.C. to Richmond Southeast High Speed Rail Operations Modeling Methodology" dated January 15, 2016 (see Figure 2).

3.0 ASSUMPTIONS AND PARAMETERS

DRPT's additional Network-Wide Analysis work was conducted in August and September of 2017. The work was conducted using the same methodology, assumptions, and parameters used in the previous FRA Refined Operations Analysis modeling work conducted between April and June of 2017, and outlined in "Change Order Request CR-0007 – Additional Operations Simulation Modeling (v2) to Satisfy FRA Requests," dated April 11, 2017.

The most significant aspects of the operations simulation methodology, assumptions, and parameters used in the Network-Wide Analysis are outlined below.

3.1 Geographic Limits of the Modeled Territory

The modeled territory used to conduct the additional Network-Wide Analysis simulations encompasses all trackage in the DC2RVA Modeling Limits, as defined in the "D.C. to Richmond Southeast High Speed Rail Operations Modeling Methodology" dated January 15, 2016, as well as additional line segments subsequently added to the DC2RVA Modeling Limits at the request of host railroads during stakeholder review of the January 15, 2016, modeling methodology (see Figure 2).

Network-Wide
Modeled Territory

"Network-wide" performance estimates are defined as performance estimates of trains operating within the modeled territory described in this section. The modeled territory used in the Network-Wide Analysis simulations consists of the following line segments:

- The DC2RVA project limits, which extend approximately 123 miles from RO, milepost (MP) CFP-110, in Arlington, VA south to the CSXT A-Line/S-Line junction at MP A-11 in Centralia, VA (Chesterfield County). Additional segments of the project include approximately 8.3 miles of the CSXT Peninsula Subdivision CA-Line from Beulah Road (MP CA-76.1) in Henrico County to AM Junction in the City of Richmond, the approximately 14.4-mile CSXT Bellwood Subdivision (S-Line) from Hermitage (SRN 3.5) in the City of Richmond to Centralia (S 10.9), and the approximately 26-mile BBRR from AM Junction to the CSXT RF&P Subdivision crossing (MP CA-111.8) in Doswell, VA.
- Amtrak Washington Terminal District from the limits of Washington Union Station south to CSXT-owned trackage at CP Virginia in Washington, D.C.
- BBRR Piedmont Subdivision between Doswell and control point Bob near East Gordonsville, VA.
- CSXT Philadelphia Subdivision between Philadelphia, PA and Bay View, MD.
- CSXT Baltimore Terminal Subdivision between Bay View, MD and St. Denis, MD.
- CSXT Capital Subdivision between St. Denis, MD and C Tower in Washington, D.C.
- CSXT Landover Subdivision between Landover, MD and Washington, D.C.
- CSXT Capital Subdivision Alexandria Branch between Riverdale Park, MD (JD Tower) and M Street in Washington, D.C.
- CSXT Metropolitan Subdivision between F Tower in Washington, D.C. and Weverton, MD.
- CSXT Cumberland Subdivision between Weverton, MD and the Mexico interlocking in Cumberland, MD.
- CSXT Cumberland Terminal Subdivision between the Mexico interlocking and Beall Street in Cumberland, MD.
- CSXT Old Main Line Subdivision between St. Denis, MD and Point of Rocks, MD.
- CSXT Old Main Line Subdivision Frederick Branch between Frederick Junction, MD and Frederick, MD.
- CSXT RF&P Subdivision between M Street in Washington, D.C. and control point RO in Arlington, VA.
- CSXT RF&P Subdivision Dahlgren Branch between Dahlgren Junction, VA and Sealston, VA.
- CSXT Peninsula Subdivision between Beulah Road in Henrico County, VA and Newport News, VA.
- CSXT Hopewell Subdivision between Bellwood, VA and Hopewell, VA.
- CSXT North End Subdivision between Centralia, VA and control point Charlie Baker in Rocky Mount, NC.

- CSXT South End Subdivision between control point Charlie Baker in Rocky Mount, NC and control point DI in Rocky Mount, NC.
- CSXT Portsmouth Subdivision between Weldon, NC and Portsmouth, VA.
- CSXT Rivanna Subdivision between Rivanna Jct. in Richmond, VA and Maidens, VA.
- NS Washington District between Alexandria, VA and Springfield, VA.

The modeled territory consists of 2,209 track-miles, of which the DC2RVA project limits represent approximately 15%.

3.2 Simulation Year

FRA requirements for the DC2RVA Project include demonstration through operations analysis (and specifically operations simulation) that the Project has provided sufficient railroad capacity to deliver the proposed passenger rail service and accommodate growth of freight rail service in an efficient and reliable multimodal rail corridor over a 20-year time horizon following the completion of the passenger project.

For the operations simulations performed in the additional Network-Wide Analysis, all cases were run for the simulation year of 2045. The year 2045 is the concluding year of the DC2RVA Project's 20-year planning horizon, based on the Project's proposed implementation year of 2025.

3.3 Infrastructure Assumptions

All infrastructure modifications made within the DC2RVA Project limits for the FRA Refined Operations Analysis simulations were also included in the subsequent Network-Wide Refined Operations Analysis simulations. These infrastructure changes were summarized in DRPT's memo to FRA dated June 9, 2017, and titled "Draft Results of DRPT's Refined Operations Analysis to Satisfy FRA Requests and Enable FRA Support for Issuance of the DC2RVA Project Tier II Draft Environmental Statement".

In addition, the Network-Wide Refined Operations Analysis to Estimate Potential Freight Delay Outside the DC2RVA Corridor simulations includes subsequent modifications to the DC2RVA infrastructure requested by FRA during a June 9, 2017, meeting with DRPT.

For the railroad subdivisions outside of the DC2RVA corridor included in the "network-wide" modeling (identified in Section 3.1), the following infrastructure modifications were made to the original infrastructure files provided by CSXT in 2015 for the DC2RVA Project's operations simulation work, in accordance with the DC2RVA Operations Modeling Methodology and the DC2RVA Tier II DEIS:

- For all cases modeled, including the No Build and all Build cases, infrastructure improvements associated with the DC2RVA "No Build" case were added. These improvements include:
  - Reconstruction of the Virginia Avenue Tunnel in Washington, D.C. to provide two mainline tracks on CSXT's RF&P Subdivision from control point M Street in Washington, D.C. southward to control point Jersey in Washington, D.C. (Construction work on this project is currently underway.)

  - Construction of additional track capacity in Washington, D.C. to provide four mainline tracks on CSXT's RF&P Subdivision from control point Virginia in Washington, D.C. southward to control point L'Enfant in Washington, D.C. This work also included the reconstruction of VRE's L'Enfant commuter rail station platform as an island platform between the two westernmost tracks of the subdivision, with platform edges to serve each track. (Construction work on this project has not begun, but is assumed to have occurred before the DC2RVA Project is implemented.)
  - Construction of additional track capacity across the Potomac River to provide four mainline tracks on CSXT's RF&P Subdivision from control point L'Enfant in Washington, D.C. to control point RO in Arlington, VA, the north end of the DC2RVA Project limits. (Construction work on this project has not begun, but is assumed to have occurred before the DC2RVA Project is implemented.)

- For all 2045 Build cases (only) modeled: Construction of additional track capacity in central Virginia identified in the Southeast High Speed Rail Richmond, VA to Raleigh, NC Tier II Final Environmental Impact Statement dated August 2015 to provide three mainline tracks on CSXT's North End Subdivision from Centralia, VA, the south end of the DC2RVA Project limits, to control point South Collier near Petersburg, VA. South Collier is the diverging point where SEHSR passenger trains using the reconstructed "S-Line" to and from North Carolina enter and exit the CSXT freight rail network in the modeled territory. (Construction work on this project has not begun, but is assumed to have occurred before the DC2RVA Project is implemented.)

3.4 Service Assumptions

3.4.1 DC2RVA Service Plan

The service plan tested in the additional Network-Wide Analysis was the same plan that was used in the previous FRA refined operations analysis simulations: the proposed DC2RVA Staples Mill Road/Main Street Station "Full Service" option, wherein Regional, Interstate Corridor, and Long Distance intercity passenger trains make station stops at both Richmond Staples Mill Road Station and Richmond Main Street Station.

This service plan incorporates the nine additional roundtrip intercity passenger trains proposed by the DC2RVA Project, which will operate in addition to the ten existing roundtrip intercity passenger trains currently providing service in the DC2RVA corridor and presumed to continue providing service in the No Build case and all Build Cases modeled. The nine additional roundtrip intercity passenger trains proposed by the DC2RVA Project consist of:

- Four new Interstate Corridor (SEHSR) roundtrip passenger trains operating between New York and Raleigh or Charlotte, NC, operating via the reconstructed "S-Line" south of Petersburg, VA. These trains will supplement the service provided by one existing Interstate Corridor roundtrip passenger operating via the CSXT "A-Line" (which was modeled in the No Build case and all Build cases).

- Five new Northeast Regional (SEHSR) roundtrip passenger trains operating between Boston, New York, or Washington and destinations in Virginia.

- Three of the new Northeast Regional (SEHSR) roundtrip passenger trains will operate to Norfolk. In addition, three existing roundtrip passenger trains operating between Washington and Norfolk were modeled in the No Build case and all Build cases.
- One new Northeast Regional (SEHSR) roundtrip passenger train will operate to Newport News. In addition, two existing roundtrip passenger trains operating between Washington and Newport News were modeled in the No Build case and all Build cases.
- One new Northeast Regional (SEHSR) roundtrip passenger train will operate between Washington and Richmond Main Street Station.

All Build cases also included the rerouting of one existing roundtrip Long Distance intercity passenger train south of Collier, VA, away from its current routing via CSXT's A-Line and onto the reconstructed S-Line to serve North Carolina.

Access between the two Richmond stations is provided by the DC2RVA Project's proposed East Acca Bypass passenger tracks. (The Auto Train would continue to operate as a nonstop service that does not make stops at either station, consistent with its existing operation. As it does today, the Auto Train was modeled using CSXT's A-Line between Richmond and Centralia.) Regional trains serving Richmond's Main Street Station bound to and from Newport News use the station's east side platform tracks, which provide the sole access to CSXT's Peninsula Subdivision linking Richmond and Newport News. Regional trains bound to and from Norfolk, as well as all Interstate Corridor and Long Distance passenger trains use the station's west side platform tracks, which are part of the CSXT S-Line linking Richmond and Centralia, VA, the southern end of the DC2RVA Project limits and the junction with CSXT's A-Line. The one roundtrip Regional train that originates/terminates at Main Street Station and lays over at the Brown Street Yard also uses the west side platform tracks.

In all cases, crew changes and baggage-handling services occur only at Richmond Staples Mill Road Station, and station dwell times that allow for these activities were incorporated into the passenger train schedules used in the Network-Wide Analysis simulations.

3.4.2 Maximum Speed

The maximum authorized speed of intercity passenger trains in the DC2RVA Corridor between Washington and Richmond, with the exception of the Auto Train, was increased from the existing 70 mph maximum to 90 mph, where feasible, in all Build cases.

3.4.3 Freight and Commuter Operations Modeled

The Network-Wide Analysis included the operation of freight trains and VRE commuter trains. Freight growth was projected using the existing CSXT growth methodology to year 2045. The 38 VRE commuter trains (19 round trips) proposed by the DC2RVA Project were modeled using schedules provided by VRE for the DC2RVA Project operations simulation work.

To further ensure representational operation of VRE commuter trains in the Network-Wide Analysis work, a station dwell time of 90 seconds for VRE station stops was programmed into the RTC software. The station dwell time used was provided by VRE.

3.4.4 Operations Plan: Platform Assignment Plan

For the Network-Wide Analysis, a representative station platform assignment plan for intercity passenger trains and commuter trains was used. DRPT had initially developed a station platform assignment plan for the previous FRA refined operations analysis. However, the station platform assignment plan used in the Network-Wide Analysis simulations included modifications to the original plan as requested by FRA during a meeting with DRPT on June 9, 2017.

This plan assigns each commuter train and passenger train to a specific platform at station stops. Settings selected in the RTC software instructed the software to incorporate the platform assignment plan into each operations simulation case. The platform assignment plan defines the primary platform assignments for intercity passenger trains and VRE commuter trains during the morning and evening peak commuter periods, when corridor train volumes can be predicted to be at their heaviest. The platform assignment plan encompasses the entire D2RVA corridor, from Washington through Spotsylvania and Richmond, to Centralia, for the morning and evening peak commuter periods.

Figures 3 and 4 below show the modified platform assignment plan, incorporating revisions requested by FRA on June 9, 2017. Figure 3 shows the corridor's northern half, between Washington and Spotsylvania, and Figure 4 shows the corridor's southern half, between Spotsylvania and Centralia.

Figure 4: Modified Refined Operations Analysis Platform Assignment Plan Spotsylvania-Centralia

In the platform assignment plan used for the morning peak commuter period, VRE commuter trains used Main Track 1 (the easternmost track) between Crossroads and Dahlgren Junction and Main Track 3 (the westernmost track) between Dahlgren Junction and CP Virginia in Washington, D.C. Manassas Line VRE trains joining the corridor at AF interlocking in Alexandria also used Track 3 north to CP Virginia. Northbound intercity passenger trains and freight trains used Main Track 1 between Crossroads and CP Virginia, although Main Track 3 was utilized as an alternate track for northbound passenger trains provided VRE trains were not delayed. Southbound intercity passenger trains and freight trains used Main Track 2 between CP Virginia and Spotsylvania.

In the platform assignment plan used for the evening peak commuter period, VRE commuter trains used Main Track 3 between CP Virginia and Dahlgren Junction and Main Track 1 between Dahlgren Junction and Crossroads. Manassas Line VRE trains also used Track 3 from CP Virginia to AF interlocking in Alexandria where they departed the corridor toward Manassas. Southbound intercity passenger trains also used Track 3 between CP Virginia and Crossroads, although Main Track 2 was utilized as an alternate track for southbound passenger trains when conflicts with freight trains could be minimized. Southbound freight trains used Main rack 2. Northbound intercity passenger trains and freight trains used Main Track 1 between CP Virginia and Spotsylvania.

In the Richmond area, the platform assignment plan for the two Richmond stations during both the morning and evening allows for passenger trains operating on the S-Line between Staples Mill Road and AM Junction (near Main Street Station) to operate on the two eastern tracks of the three-main-track S-Line, which provides a direct, non-diverging route for passenger trains between the S-Line and the Acca Yard East Bypass passenger tracks. Northbound freight trains from Fulton Yard operating on the S-Line to Acca Yard make a direct, non-diverging move through AM Junction to reach the westernmost of the S-Line's three main tracks, which provides a direct, non-diverging northward route to Acca Yard.

3.4.5 Operations Plan: Revised Operations Analysis Conceptual Schedule

Passenger train running times and recovery times between Washington Union Station and Petersburg Station in the Network-Wide Analysis simulations were identical to those developed for the previous FRA refined operations analysis simulations. These schedules had been modified from the initial DC2RVA conceptual schedule included in the DEIS to enable trains to achieve an all-stations and end-to-end on-time performance at a sufficient margin above 90%, such that the performance could be considered likely to be achieved in normal real-world operation of the DC2RVA corridor under the revised corridor infrastructure and platform assignment plan incorporated into the FRA refined operations analysis simulation work. Details of the train schedule and running time modifications developed for this work were summarized in DRPT's memo to FRA dated June 9, 2017, and titled "Draft Results of DRPT's Refined Operations Analysis to Satisfy FRA Requests and Enable FRA Support for Issuance of the DC2RVA Project Tier II Draft Environmental Statement".

3.4.6 Performance Metrics and Thresholds

The performance estimates of passenger trains and commuter trains in DRPT's additional Network-Wide Analysis were measured against on-time performance standards for intercity passenger rail service developed by FRA and Amtrak in accordance with Section 207 of the Passenger Rail Investment and Improvement Act (PRIIA). In all cases, passenger trains tested in the operations simulation were assumed to arrive into the modeled territory not more than 15 minutes late, using a triangular distribution of late departure from Washington Union Station or late arrival at Petersburg.

On-time performance estimates for passenger and commuter trains were measured as follows:

- End-to-end (endpoint) on-time performance was measured between Washington Union Station in Washington, D.C. and Petersburg Station, VA, for passenger trains operating between Washington and Norfolk, North Carolina, or Georgia/Florida. Endpoint on-time performance was measured between Washington Union Station and Richmond Main Street Station for passenger trains operating between Washington and Newport News or Richmond. Endpoint on-time performance was measured between Washington Union Station and Spotsylvania station for VRE commuter trains. Endpoint on-time performance was measured as the percentage of times a train arrived at its endpoint terminal more than 10 minutes after its scheduled arrival time. The endpoint on-time performance threshold for passenger trains and commuter trains in the model was 90%.

Endpoint on-time performance estimates were measured for three different passenger train types:

- Amtrak Long Distance intercity passenger trains

- Amtrak Regional and Interstate Corridor intercity passenger trains
- Virginia Railway Express commuter trains

The performance estimates for freight trains in the Network-Wide Analysis were measured across the entire 2,209-track-mile modeled territory between Philadelphia, PA, Cumberland, MD, Newport News, VA, and Rocky Mount, NC, plus connecting lines, as described in Section 3.1. Specific freight train performance estimated assessed during the simulations included:

1. Freight train delay minutes per 100 train-miles, by train type, network-wide
2. Number of freight trains delayed per day, by number of hours, network-wide
3. Cumulative freight train hours of delay, over 12 days, network-wide
4. Number of freight trains recrewed per day due to Hours of Service, network-wide
5. Hours of total freight train delay, by location, where total train delays exceeded 3 hours in the 12-day model period, network-wide

4.0 OPERATIONS SIMULATION CASES

Four operations simulation Build cases were tested utilizing the DRPT recommended corridor alternative that provides Full Service to both Richmond Staples Mill Road and Main Street Stations. The four cases were modeled for the Year 2045 Full-Build (Horizon Year) incorporating the additional infrastructure changes, service changes, assumptions, and parameters described in Section 3.

All of the operations simulation cases performed as part of DRPT's Network-Wide Analysis were conducted in the same modeled territory between Philadelphia, PA, Cumberland, MD, Newport News, VA, and Rocky Mount, NC, plus connecting lines, as described in Section 3.1. All cases had a common track configuration throughout the modeled territory, except within the DC2RVA corridor where different infrastructure alternatives were tested in different cases, as described below. All cases were dispatched with the infrastructure modifications between Washington and Centralia that were described in Section 3.4. The only exceptions to the use of a common infrastructure in this operations analysis are described below, when a simulation case required a specific modification to the common infrastructure. The following cases were developed and tested.

DC2RVA 2045 No Build. This case measured network-wide freight train performance with the No Build infrastructure on the DC2RVA corridor, as described in the DC2RVA DEIS, and did not include the new intercity passenger trains proposed by the DC2RVA Project.

DC2RVA 2045 Build. This Build case measured network-wide freight train performance with three main tracks on the DC2RVA corridor from Alexandria to Richmond Staples Mill Road Station. This case included the new intercity passenger trains proposed by the DC2RVA Project.

DC2RVA 2045 Build, 2 tracks Ashland. This Build case measured network-wide freight train performance with three main tracks on the DC2RVA corridor from Alexandria to Richmond Staples Mill Road Station with the exception of a two-track segment through Ashland. The northern and southern limits of the two-main-track section through Ashland encompass a distance of approximately 2.01 miles, from a proposed interlocking north of Vaughan Road at milepost CFP 15.75 to a proposed interlocking south of Ashcake Road at milepost CFP 13.74. This case included the new intercity passenger trains proposed by the DC2RVA Project.

DC2RVA 2045 Build, 2 tracks Ashland + Track Out of Service North (MOW Outage). This Build case measured network-wide freight train performance with three main tracks on the DC2RVA corridor from Alexandria to Richmond Staples Mill Road Station with the exception of a two-track segment through Ashland, plus a randomly selected additional two-track segment of approximately 10 miles in length between Alexandria and Crossroads, in order to test the response of the network to a simulated maintenance-of-way outage. In this case, the two-main-track section through Ashland was identical to the one used in Case 2. In addition, a track outage was added to the corridor on Main Track 2 between North Possum Point (CFP 81.3) and Arkendale (CFP 72.1), a distance of 9.2 miles. This outage restricted trains from using Main Track 2 for a period of 7 hours, from 9:00 a.m. to 4:00 p.m., for all of the days modeled. This case included the new intercity passenger trains proposed by the DC2RVA Project.

DC2RVA 2045 Build, 2 tracks south of Crossroads. This Build case measured network-wide freight train performance with three main tracks on the DC2RVA corridor from Alexandria to Crossroads, and two main tracks from Crossroads to Richmond Staples Mill Road Station. This case included the new intercity passenger trains proposed by the DC2RVA Project.

5.0 RESULTS

This section presents the results of the Network-Wide Analysis conducted by DRPT. "Network-wide" performance estimates are defined as performance estimates for trains operating within the modeled territory described in Section 3.1. The metrics that are reported are as follows:

For passenger trains:

- Endpoint On-Time Performance by train type, between Petersburg and Washington Union Station (averaged results from 5 randomized cases).
- The passenger train types measured were:
  - Amtrak Long-Distance Intercity Passenger Trains
  - Amtrak Regional and Interstate Corridor Intercity Passenger Trains
  - Virginia Railway Express Commuter Trains

For freight trains:

- Minutes of Delay per 100 Train-Miles, Network-Wide (averaged results from 5 randomized cases)
- Number of Freight Trains Delayed per Day, by Number of Hours, Network-Wide (averaged results from 5 randomized cases)
- Cumulative Freight Train Hours of Delay, Over 12 Days, Network-Wide (averaged results from 5 randomized cases)
- Number of Freight Trains Recrewed per Day due to Hours of Service, Network-Wide (averaged results from 5 randomized cases)
- Hours of Total Train Delay, by Location, Where Total Train Delays Exceed 3 Hours in the 12-Day Model Period, Network-Wide (averaged results from 5 randomized cases)

- The freight train types measured were:
  - All Freight Trains (cumulative); the All Freight Trains category is a weighted average of all freight train types
  - Expedited Intermodal Freight Trains
  - Intermodal (non-expedited) Freight Trains
  - Merchandise Freight Trains
  - All Other Freight Train Types

Note that Minutes of Delay per 100 Freight Train-Miles is calculated by the RTC operations simulation model as follows:

- Adding all of the train miles of all of the trains that operate during the model's statistical capture period
- Adding all of the minutes of delay of all of the trains that operate during the model's statistical capture period
- Dividing the total delay by total train miles divided by 100.
- Displayed as a formula:

$$\frac{\Sigma \text{ Delay}}{\Sigma \text{ Train Miles}/100}$$

- Delay for each freight train that operates during the model's statistical capture period is calculated by the RTC model as the difference between the run time of each freight train in an unimpeded case to each train's actual run time in the model.

Passenger Train On-Time Performance

Table 2 shows the passenger train endpoint on-time performance in each case.

Table 2: Passenger train endpoint on-time performance, Petersburg to Washington Union Station (averaged results from 5 randomized cases)

Number of Trains Recrewed per Day Due to Hours of Service

When a freight train crew reaches its federally regulated 12-hour on-duty time (known as hours of service), the train crew must cease operation and the freight train must be stopped until a new crew arrives. Table 6 shows the average number of trains that had to be recrewed per day, network-wide, in each case, in the 12-day model period, because a train crew exceeded its on-duty time.

Table 6: Numbers of Trains Recrewed per Day Due to Hours of Service, Network-Wide (averaged results from 5 randomized cases)

Hours of Total Train Delay, By Location, Where Total Train Delay Exceeds 3 Hours in the 12-Day Model Period

Table 7 shows the hours of total freight train delay, by location (identified by subdivision and milepost), network-wide, where total freight train delay exceeds 3 hours in the 12-day model period. Delays were recorded by subdivision and field milepost. Freight train delays of more than 3 hours were recorded at 203 distinct locations, as seen in the table below. In 21 instances at eight different locations, freight trains experienced total delays exceeding 24 hours over the 12-day model period, including at Newport News (Peninsula Subdivision, milepost 11.75) where total train delays ranged between 4 days and 6 days.

FINAL SUMMARY REPORT

D.C. TO RICHMOND SOUTHEAST HIGH SPEED RAIL

DC TO RICHMOND
SOUTHEAST HIGH SPEED RAIL

DC2RVA TOWN OF ASHLAND/HANOVER COUNTY AREA
COMMUNITY ADVISORY COMMITEE

Final CAC Summary Report

October 2017

DRPT
Virginia Department of Rail and Public Transportation

Foreword

On behalf of the Commonwealth of Virginia and the Department of Rail and Public Transportation (DRPT), I would like to personally thank the members of the Ashland/Hanover Area Community Advisory Committee (CAC) who participated in the review of alternatives for the Washington, D.C. to Richmond Southeast High Speed Rail Project (DC2RVA).

The Committee's review of alternatives and identification of a range of "least objectionable" alternatives will inform the final determination of a preferred alternative for the Ashland/Hanover County area by DRPT, the Commonwealth Transportation Board (CTB), and ultimately, the Federal Railroad Administration (FRA). Committee members put in long hours of hard work to understand the DC2RVA Project's need for additional rail capacity, to evaluate the many local alternatives, and to weigh each alternative's potential community effects. I greatly appreciate the Committee members' service to their communities and their assistance to DRPT on the DC2RVA project. I also want to recognize the support provided by members of the general public and from affected communities, whose participation, questions, comments, and advice were instrumental to the success of the CAC. I recognize the difficulties that property owners face, and pledge to move the process forward to a Record of Decision by the FRA that is informed by our collaboration.

Sincerely,

Jennifer Mitchell, Director

Department of Rail and Public Transportation

Summary Presented to Commonwealth Transportation Board, September 19, 2017

MEMORANDUM

TO: Members of the Commonwealth Transportation Board

FROM: Jennifer Mitchell, Director
Department of Rail and Public Transportation

DATE: September 19, 2017

SUBJECT: Summary of the Town of Ashland/Hanover Area Community Advisory Committee review of alternatives for the Washington, D.C. to Richmond Southeast High Speed Rail Project (DC2RVA)

DRPT convened the Community Advisory Committee (CAC) to take an additional look at all previous options for greater rail capacity in the Ashland/Hanover County area, and to identify potential options that could meet the purpose and need of the DC2RVA project, while also minimizing or avoiding potential impacts to the community. The CAC met five times in the Ashland/Hanover area. All meetings were open to the public, and Meeting #3 in July 2017 set aside time for public comments.

After careful and deliberate consideration of the options for increased rail capacity in the Ashland/Hanover area, the CAC agreed that the following are the least objectionable options for each category of alternatives. The identification of these least objectionable alternatives by the CAC does not in any way imply an endorsement of any of the alternatives by any member of the CAC.

Least Objectionable Alternatives

- The 3-2-3 option is the least objectionable option for adding rail capacity through the Town of Ashland at-grade. In this option, a third track would be added to the existing CSX right-of-way north and south of the Town of Ashland, while the existing two tracks would remain in service through Ashland. The downtown Ashland station would be closed, and road overpasses would be added at Vaughan Road and Ashcake Road. The crossing at England Street would remain at-grade.
- A three-track trench through the Town of Ashland is the least objectionable option for adding capacity below-grade. A trench would be constructed through Ashland approximately 50 feet wide and 33 feet deep, extending from north of Vaughan Road to south of Ashcake Road. The two existing tracks through the Town of Ashland, along with

a third new track, would pass through Ashland within the trench. The trench would be provided with strategically placed covers interspersed with open areas, allowing motor vehicle and pedestrian crossings, landscaping, and other amenities. Details associated with the placement and length of covered spaces would be determined in final design. The downtown Ashland station would be closed.

- The western bypass closest to the Town of Ashland, identified as AWB 1, is the least objectionable option for adding rail capacity outside the Town of Ashland – with the provision that the alignment would be adjusted to avoid directly impacting a commercial facility, and to minimize impacts to residential properties. In this option, a two-track bypass approximately seven miles long would extend around the Town of Ashland to the west. Roads bisecting the new bypass would be modified to avoid creating any new at-grade road/rail crossings. The Ashland station could remain in service.

The following list includes all of the other alternatives that were considered by the CAC, but not identified as least objectionable alternatives.

Other Build Alternatives Considered by the CAC

Through Town Alignments At-Grade Options:
- Add one track on the west of existing tracks
- Add one track on the east of existing tracks
- Add one track and shift existing two tracks to center the three tracks
- Add one track and shift existing two tracks to center the three tracks AND remove station

Elevated Options:
- Elevate 1 track above existing two tracks
- Elevate 2 tracks above existing two tracks
- Elevate 3 tracks above existing right-of-way and remove at-grade tracks

Below-Grade Options:
- 1-track tunnel – Cut and cover tunnel east of existing two tracks
- 1-track tunnel – Bore tunnel
- 1-track tunnel – Deep bore tunnel
- 2-track tunnel – One east and one centered
- 3-track tunnel – Cut and cover continuous cover below existing right-of-way and remove at-grade tracks
- Shallow bore 1-track tunnel for passenger trains only (proposed through CAC)

Eastern Bypass Alignments:
- Ashland East Bypass (AEB 1)
- Ashland East Bypass to BBRR (AEB 2)
- Ashland East Bypass That Does Not Cross I-95 (AEB 3)
- Ashland East Bypass in the I-95 Median (AEB 4)
- Ashland East Bypass White Paper Route (AEB 5)

Buckingham Branch (BBRR):

- Freight Diversion onto BBRR
- Passenger Diversion onto BBRR

Doswell Area Connections to Buckingham Branch Railroad:

- Wye Options #1 - #5

Western Bypass Alignments:

- Ashland West Bypass Revision #1 (AWB 2)
- Ashland West Bypass Revision #2 (AWB 3)
- Ashland West Bypass Revision #3 (AWB 4)

DRPT would like to recognize the long hours and hard work put forth by the members of the CAC. I greatly appreciate their service to their communities and their assistance to DRPT on the DC2RVA project. I also want to recognize the support provided by members of the public and affected communities, whose participation, questions, comments, and advice was instrumental to the success of the CAC.

Please reference the project website, www.dc2rvarail.com, for additional information about the Town of Ashland/Hanover Area CAC, including meeting videos, handouts, presentations, and meeting minutes.

Introduction

The Federal Railroad Administration (FRA) and the Virginia Department of Rail and Public Transportation (DRPT) are working to improve intercity passenger rail service in the north-south corridor between Washington, D.C. and Richmond, VA through the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project. The purpose of the DC2RVA Project is to increase capacity to deliver higher speed passenger rail, expand commuter rail, and accommodate growth of freight rail service in an efficient and reliable multimodal rail corridor. Potential alternatives to meet the DC2RVA Purpose and Need are evaluated in the DC2RVA Draft Environmental Impact Statement (EIS), approved by FRA for public release on September 8, 2017. The DC2RVA Draft EIS includes DRPT recommendations for a preferred alternative for most of the 123-mile DC2RVA rail corridor. However, in the Town of Ashland/Hanover County area (referenced as Alternative Area 5 in the Draft EIS), DRPT did not recommend a preferred alternative. Rather, the Draft EIS evaluates a no-build alternative and four build alternatives with several station location options for the Ashland/Hanover County area. In addition, the Alternatives Technical Report, Appendix A of the Draft EIS, describes DRPT's evaluation and screening of 29 possible alternatives for the Ashland/Hanover County area.

While the DC2RVA Draft EIS was being prepared, DRPT recognized that many of the alternatives for greater rail capacity in the Town of Ashland and Hanover County area generated community concerns. As a result, DRPT recommended a community-based effort to FRA to supplement DC2RVA public involvement activities and help inform selection of a preferred alternative that meets the DC2RVA Purpose and Need through the Ashland/Hanover County area.

Purpose of the Community Advisory Committee

DRPT established the Community Advisory Committee (CAC) to advise and inform DRPT on DC2RVA alternatives and issues in the Ashland/Hanover County area. The CAC was tasked to take an additional look at all previous options for greater rail capacity in the Ashland/Hanover County area and identify potential options that could meet the Purpose and Need of the DC2RVA project, while also minimizing or avoiding potential impacts to the community. The CAC process was initiated to run in parallel to the Draft EIS. The Committee was specifically requested to:

- Review all alternatives studied to date in the Draft EIS;
- Recommend alternative(s), including new alternatives or modifications to alternatives, to meet the DC2RVA Purpose and Need;
- Identify and represent the concerns of members' communities; and
- Apply a structured and transparent approach seeking consensus.

Community Advisory Committee Approach

The Community Advisory Committee, composed of locally-appointed members of Hanover County, the Town of Ashland, Randolph-Macon College, the Richmond Regional Transportation Planning Organization, and CSX Transportation (CSX), met five times in the Ashland/Hanover area at approximately monthly intervals.

- All meetings were open to the public.
- Meetings were video recorded and posted to the project website, www.dc2rvarail.com.
- Meeting materials were posted to the project website.
- Committee members were requested to share comments directed to them individually with other CAC members and the project team.

DRPT Director Jennifer Mitchell acted as chairperson for the meetings. DRPT staff and members of the DC2RVA consultant team provided the CAC with technical information and presentations on:

- Project background and regulatory requirements,
- Rail operations and engineering,
- Potential effects of different alternatives, and
- Addressed questions posed by the CAC members and the public.

DRPT staff and members of the DC2RVA consultant team also met individually with members of the CAC upon request to discuss members' technical questions. A summary of these questions, DRPT responses, and any materials generated were then shared with the rest of the CAC and posted to the project website.

In addition to the five CAC meetings, the Town of Ashland hosted a meeting on September 6, 2017, to solicit public input regarding the through-town three-track trench option. DRPT staff and the DC2RVA consultant team attended the Town's meeting and presented information on the trench option including construction sequencing and potential effects. This meeting was open to the public.

Community Advisory Committee Members

Ashland/Hanover County Area Community Advisory Committee	
Committee Member	**Representing**
Aubrey "Bucky" Stanley, Hanover County Board of Supervisors	Hanover County
Cecil "Rhu" Harris, Jr., Hanover County Administrator	Hanover County
Carey Carlisle, Hanover County Citizen Representative	Hanover County

Linwood Attkisson, Hanover County Citizen Representative	Hanover County
James Foley, Mayor	Town of Ashland
Josh Farrar, Town Manager	Town of Ashland
Kristin Reihl, Town of Ashland Citizen Representative	Town of Ashland
Paul Davies, Vice President of Administration and Finance	Randolph-Macon College
Jennifer Thompson, Executive Assistant to the President	Randolph-Macon College
Preston Bryant, Randolph-Macon College Board of Trustees	Randolph-Macon College
Randy Marcus, CSXT Resident Vice President	CSX Transportation
Fyiad Constantine, CSXT Engineering	CSX Transportation
Brian Barton, CSXT Trainmaster, Passenger Operations	CSX Transportation
Barbara Nelson, Transportation Director	Richmond Regional Transportation Planning Organization

Public Comments

All CAC meetings were open to the public, and a majority of Meeting #3 was set aside specifically for verbal public comment. In addition, the public was provided with several opportunities to participate and comment as described below:

- Public comment cards that were available at each meeting;
- Online comment submittals to www.dc2rvarail.com at any time;
- Post-meeting review of all meeting materials and presentations made available for public review on www.dc2rvarail.com;
- Public comments submitted to the project team and/or individual CAC members that were shared with the CAC; and
- All public comments and questions were reviewed by the DRPT staff, and, as appropriate, responses were prepared and shared with the CAC.

It is important to note that the CAC process was not meant to replace the Draft EIS public hearings and public comment period. Members of the public were encouraged to also provide comments on the Draft EIS once the document was made publicly available on September 8, 2017.

Meeting Summary

The CAC met monthly from May through September 2017, as follows:

CAC Meeting #1 (May 22, 2017)

The CAC was briefed on the legal requirements of the National Environmental Policy Act (NEPA), which guides DRPT's evaluations of the environmental effects of the proposed DC2RVA improvements, measures to avoid, minimize, and otherwise mitigate those effects, and allows the public to understand and comment on the benefits and impacts of the project, the DC2RVA Project's Purpose and Need, the basics of rail operations, and the Project's engineering basis of design for infrastructure improvements and alternatives. Appendix A provides the Meeting #1 agenda, member materials, presentation, comment report, and meeting summary.

CAC Meeting #2 (June 26, 2017)

The CAC was briefed on the alternatives identified and evaluated for the Ashland/Hanover County area in preparing the Draft EIS, including the Alternatives Screening Process and results. Additional background was provided on rail operations modeling and federal requirements for evaluating potential project effects on cultural resources and wetlands and waters of the U.S. The CAC requested additional information be provided on eastern bypass alternatives, including use of the Buckingham Branch Railroad, and below-grade options for the Town of Ashland. Appendix B provides the Meeting #2 agenda, presentation, comment report, and meeting summary.

CAC Meeting #3 (July 24, 2017)

The CAC was provided additional information on the eastern bypasses and below-grade options, and the results of DRPT's rail operations modeling. A soft earth tunnel and a three-track trench with capped sections were introduced as additional through Town below-grade alternatives. The meeting was then opened for public comment. Appendix C provides the Meeting #3 agenda, presentation, comment report, meeting summary, and member materials.

CAC Meeting #4 (August 28, 2017)

DRPT presented an overview of the Draft EIS status, and how the CAC process would fit within the DC2RVA project moving forward. DRPT requested the CAC members identify a "least objectionable alternative" in each of the following four categories: through Town at-grade, through Town below-grade, western bypass, and eastern bypass. The CAC indicated that identification of a least objectionable alternative in any category does not constitute an endorsement of that alternative by the CAC or DRPT.

The CAC conducted a review of alternatives by categories, and began deliberations to identify a least objectionable alternative for each category. The CAC agreed to remove the following options from further consideration:

- Three tracks at-grade through Ashland
- Buckingham Branch Railroad
- Eastern Bypass 1 (AEB1)
- Eastern Bypass 2 (AEB2)

The CAC then discussed remaining options.

Through Town At-Grade: The CAC members, with the exception of CSX representatives, identified the 3-2-3 alternative as the least objectionable alternative for a through Town at-grade alternative. CSX objected to the 3-2-3 alternative, citing concerns over potential delays to freight traffic within their rail network.

Through Town Below-Grade: Several of the CAC members favored the deep bore tunnel and/or the soft earth tunnel, but indicated the cost of these alternatives would make these alternatives prohibitive and impractical as a least objectionable alternative. Representatives of the Town of Ashland requested more time to review the potential pros and cons of a three track trench. An identification of a least objectionable below-grade alternative was postponed for a following CAC meeting.

Western Bypass: The CAC did not identify a least objectionable western bypass. The CAC members deferred to the Hanover County representatives regarding the pros and cons of the western bypasses. Representatives of Hanover County requested additional time to review the western bypass alternatives.

Eastern Bypass: The CAC did not identify a least objectionable eastern bypass. The CAC members deferred to the Hanover County representatives regarding the pros and cons of the eastern bypasses. Representatives of Hanover County requested additional time to review the remaining eastern bypass alternatives.

Appendix D provides the Meeting #4 agenda, presentation, comment response report, letter to CAC members from Director Mitchell, DC2RVA Town of Ashland/Hanover County CAC August 2017 Correspondence, Buckingham Branch Railroad presentation, and other supplemental member materials and maps.

Ashland Trench Meeting (September 6, 2017)

The Town of Ashland hosted this meeting to solicit public input on the three-track trench alternative. The purpose of the meeting was for the Town's CAC members and Town Council members to hear from the community prior to making any recommendations on a least objectionable below-grade alternative. DRPT staff and the DC2RVA consultant team presented information on the conceptual design and layout of a completed trench with three tracks, described its likely construction sequencing and schedule, and answered questions from the public. Appendix E provides the agenda/presentation prepared by the Town Council, the presentation materials on the trench, meeting materials, a summary of the meeting, and a list of comments/questions and responses.

CAC Meeting #5 (September 11, 2017)

The CAC concluded their deliberations on the least objectionable alternatives for each category. After careful consideration of the options for greater rail capacity in the Ashland/Hanover area, the CAC recognized that no single option would meet every stakeholder's needs equally, and that all of the options would have impacts to the community. The Committee did not endorse any option as its preferred alternative; however, the Committee did agree that the following are the least objectionable alternatives:

- The 3-2-3 option is the least objectionable option for adding rail capacity through Ashland at-grade. In this option, a third track is added to the existing CSX right-of-way north and south of town while the existing two tracks remain in service through town. The downtown Ashland station would be closed, and road overpasses would be added at Vaughan Road and Ashcake Road. England Street would remain at-grade.
- A three-track trench through the Town of Ashland is the least objectionable option for adding capacity below-grade. In this option, a third track would be added to the existing CSX right-of-way north and south of town. A trench approximately 50 feet in width and 33 feet deep, extending from approximately Vaughan Road to Ashcake Road, would be constructed through town. The existing two tracks and a new third track would be placed within the trench. The trench would be provided with strategically-placed covers interspersed with open areas, allowing motor vehicle and pedestrian crossings, replacement of travel lanes, landscaping, and other amenities above the trench while eliminating the need for intrusive ventilation structures.
- The western bypass closest to the Town of Ashland, identified as AWB1 in DC2RVA Draft EIS documents, was determined to be the least objectionable option for adding rail capacity outside the Town of Ashland – with the provision that the bypass alignment be adjusted to avoid or reduce directly impacting commercial and residential properties. In this option, a two-track bypass approximately seven miles long would extend around the

Town of Ashland to the west. Roads bisecting the new bypass would be grade-separated, closed, or relocated to avoid new at-grade road/rail crossings. The existing two tracks through town would remain in service, and the Ashland station could remain in service.

Appendix F provides the Meeting #5 agenda, presentation, and comment responses report.

Results and Next Steps

Over the course of five months, the CAC reviewed and fully evaluated over 30 different alternatives for the Town of Ashland/Hanover County area, including alternatives suggested by the public and alternatives developed by the CAC.

The CAC also considered hundreds of comments and questions provided by the public. The CAC determined that many of the alternatives were not practical, including use of the Buckingham Branch Railroad, a deep bore tunnel, and adding tracks to the median of Interstate 95. The CAC also recognized that all of the alternatives would have substantial adverse impacts to residents, commercial interests, and communities, and would be objectionable to one or more groups of stakeholders.

The CAC chose not to endorse any specific alternative. Instead, as documented in DRPT's September 19, 2017 memorandum to the CTB, the CAC provided recommendations for three least objectionable alternatives. The CAC also recognized that no matter which alternative the CTB ultimately recommends to FRA, mitigation for the adverse impacts will need to be considered, and the CAC members committed to working with DRPT on the mitigation.

The CTB will consider CAC results as it adopts a recommended preferred alternative for DC2RVA, which will include a recommendation for the Ashland/Hanover County area. DRPT anticipates the CTB will develop its recommendation for the DC2RVA preferred alternative at the December 6, 2017 CTB meeting. This will be documented in a Recommendation Report and submitted to FRA for inclusion in the Final EIS, along with the CAC Summary Report. FRA will make the ultimate decision for a preferred alternative for DC2RVA in the Record of Decision.

APPENDIX H

RESOLUTION OF THE COMMONWEALTH TRANSPORTATION BOARD

RESOLUTION
OF THE
COMMONWEALTH TRANSPORTATION BOARD

December 6, 2017

MOTION

Made by: Mr. Brown, Seconded by: Ms. Valentine
Action: Motion Carried, Unanimously

Title: Recommendation of a Preferred Alternative for the Washington, D.C. to Richmond Southeast High Speed Rail Tier II Environmental Impact Statement

WHEREAS, the Commonwealth Transportation Board adopted Recommended Alternative A-Plus (see Attachment A), as set forth in the *Study Area Alternatives Recommendation Report for the Southeast High Speed Rail Tier I Draft Environmental Impact Statement*, dated March 5, 2002 which was subsequently adopted by the Federal Railroad Administration in the Tier I Final Environmental Impact Statement and Record of Decision; and,

WHEREAS, the Virginia Department of Rail and Public Transportation (DRPT), in conjunction with the Federal Railroad Administration, have continued to further the effort of implementing higher speed passenger rail service within the Southeast Rail Corridor by developing the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) project, a Tier II Environmental Impact Statement to identify a preferred alternative within the selected 123- mile corridor between Washington, D.C. and Richmond; and,

WHEREAS, DRPT conducted significant public and stakeholder involvement for the DC2RVA project including direct mail, newspaper advertisements, project website and social media campaigns, ten public meetings, five formal public hearings, and multiple local meetings and workshops; and,

WHEREAS, the DC2RVA Tier II Draft Environmental Impact Statement that evaluated multiple alternatives in six Alternative Areas along the CSX Transportation corridor between Washington, D.C. and Richmond was published on September 8, 2017 and was followed by a 60-day public comment period; and,

WHEREAS, DRPT included in the Draft Environmental Impact Statement a recommended preferred alternative for Alternative Areas 1, 2, 3, 4, and 6 of the DC2RVA study corridor as shown in Attachment B; and,

WHEREAS, DRPT limited the footprint of potential construction activities for DC2RVA project alternatives at Main Street Station, located in the Shockoe Bottom area of Richmond, in order to avoid and/or limit any potential impacts after evaluating, in a manner consistent with the Virginia Department of Historic Resources guidelines, and per the process set forth in Section 106 of the National Historic Preservation Act of 1966, the cultural resources in the Shockoe Bottom area of Richmond; and,

WHEREAS, DRPT has relied on a broad array of historical research to inform its layout of the DC2RVA improvements and to summarize available historical research and assets associated with the Shockoe Bottom slave trade, including areas for future slavery museums and memorials, five known archaeological sites, scholarly research on the Shockoe Bottom slave trade, current public commentary, and possible locations for additional historical and archaeological research and preservation, all to be summarized in a separate chapter of the Final Environmental Impact Statement as supplemental information that may be beneficial to future public and private decisions and actions in the Shockoe Bottom area; and,

WHEREAS, recognizing the unique nature of the region and concerns from the community over Draft EIS alternatives in Alternative Area 5 as shown in Attachment B, DRPT convened the Town of Ashland/Hanover County Community Advisory Committee, to take a more intensive look at all rail options that could meet the purpose and need of the DC2RVA project, while also minimizing or avoiding any potential impacts of those options; and,

WHEREAS, DRPT briefed the Commonwealth Transportation Board on DRPT's recommendation at its October 23, 2017 Workshop meeting and at its November 9, 2017 Rail Committee meeting on the outcome of the CAC process, being the following three least-objectionable alternatives for Alternative Area 5: maintain two tracks through the town of Ashland (5A), add a two-track west bypass (AWB1, previously screened out), and add a three-track trench through the Town of Ashland (variation of tunnel option previously screened out).

NOW, THEREFORE, BE IT RESOLVED, that the Commonwealth Transportation Board recommends to Federal Railroad Administration the following preferred alternative for inclusion in the forthcoming Rail Alignment Recommendation Report, Final Environmental Impact Statement and Record of Decision, in concurrence with DRPT's recommendation, in the following areas of the DC2RVA study corridor, as shown in Attachment B: Alternative Area 1-1A, 1B, or 1C; Alternative Area 2-2A; Alternative Area 3-3B; Alternative Area 4-4A; Alternative Area 5-5A; Alternative Area 6-6F.

BE IT FURTHER RESOLVED that the recommended preferred alternative for Alternative Area 1 (Arlington) will include the retention of all three alternatives 1A, 1B and 1C until after completion of the Long Bridge Tier II Environmental Impact Statement, whereby one of the three retained alternatives will be selected as the recommended preferred alternative based on compatibility with the Long Bridge Tier II Environmental Impact Statement preferred alternative.

BE IT FURTHER RESOLVED that if the Commonwealth Transportation Board on the recommendation of DRPT determines that additional rail capacity is needed in Alternative Area 5 to meet the performance standards required for additional passenger trains, DRPT shall conduct a new study based on updated information, including but not limited to future freight volumes, land uses, and capacity needs within the overall rail network.

BE IT FURTHER RESOLVED that the Commonwealth Transportation Board hereby directs DRPT to avoid and/or minimize any permanent property acquisitions, to the extent practicable, in areas where only two mainline tracks on the current alignment are recommended, and to avoid any permanent property acquisitions related to the DC2RVA project that would affect the operations of Randolph-Macon College.

BE IT FINALLY RESOLVED that the Commonwealth Transportation Board hereby directs DRPT to explore the need for other potential improvements in downtown Ashland (Alternative Area 5) that will help protect the safety of motorized and non-motorized roadway users, and to facilitate emergency access.

# # #

Attachment A

Excerpt from Record of Decision for the Tier I Southeast High Speed Rail Project
November 20, 2002

DECISION

The FRA and the FHWA working closely with NCDOT and VDRPT have selected the following build alternative for the SEHSR project for further Tier II environmental studies:

The preferred alternative consists of Alternative A (utilizing the S-line and the NCRR rights-of-ways) modified to include passenger connectivity to Winston-Salem, NC (Alternative B via the Winston Salem South Bound –WSSB and the K-line railroad rights-of-ways). The combination of Alternatives A and B best meets the project's purpose and need, while minimizing environmental impacts and has the highest level of public and agency support. VDRPT and NCDOT recommend that the Alternative A portion be developed first and that the Alternative B portion be developed in conjunction with the efforts of the Piedmont Authority for Regional Transportation (PART), as appropriate. PART is responsible for coordinating the regional transportation system in the counties around the Winston-Salem connection. The combination of Alternative A and Alternative B has:

- Minimized potential impacts to wetlands and threatened and endangered species;
- Moderate levels of potential environmental complexity;
- Strongest agency support;
- Highest level of service;
- Highest projected annual ridership;
- Largest combined trip diversions from auto and air to rail, with competitive total travel time;
- Second best net reduction in NO_x emissions and overall net energy use reduction;
- Best potential operating cost recovery; and
- Highest level of public support.

As identified in the FEIS, the preferred alternative is also the environmentally preferred alternative.

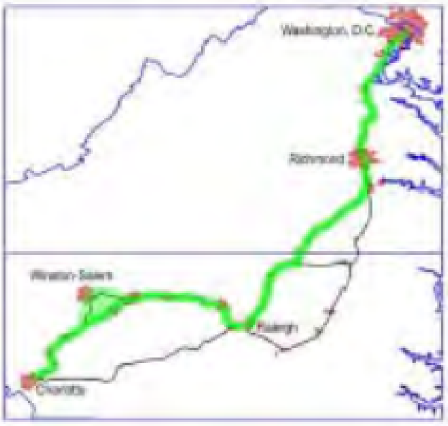

Figure 1
Preferred Alternative
Alt. A + Alt. B

Attachment B

Description of DRPT's Recommended Preferred Alternative for DC2RVA

ALTERNATIVE AREA 1: ARLINGTON (LONG BRIDGE APPROACH)
Location: CFP 110 - CFP 109.3
Recommendation: Retain Alternative 1A, 1B, and 1C to support a deferred selection until after completion of Long Bridge Study
Approximate Length: 1 Mile

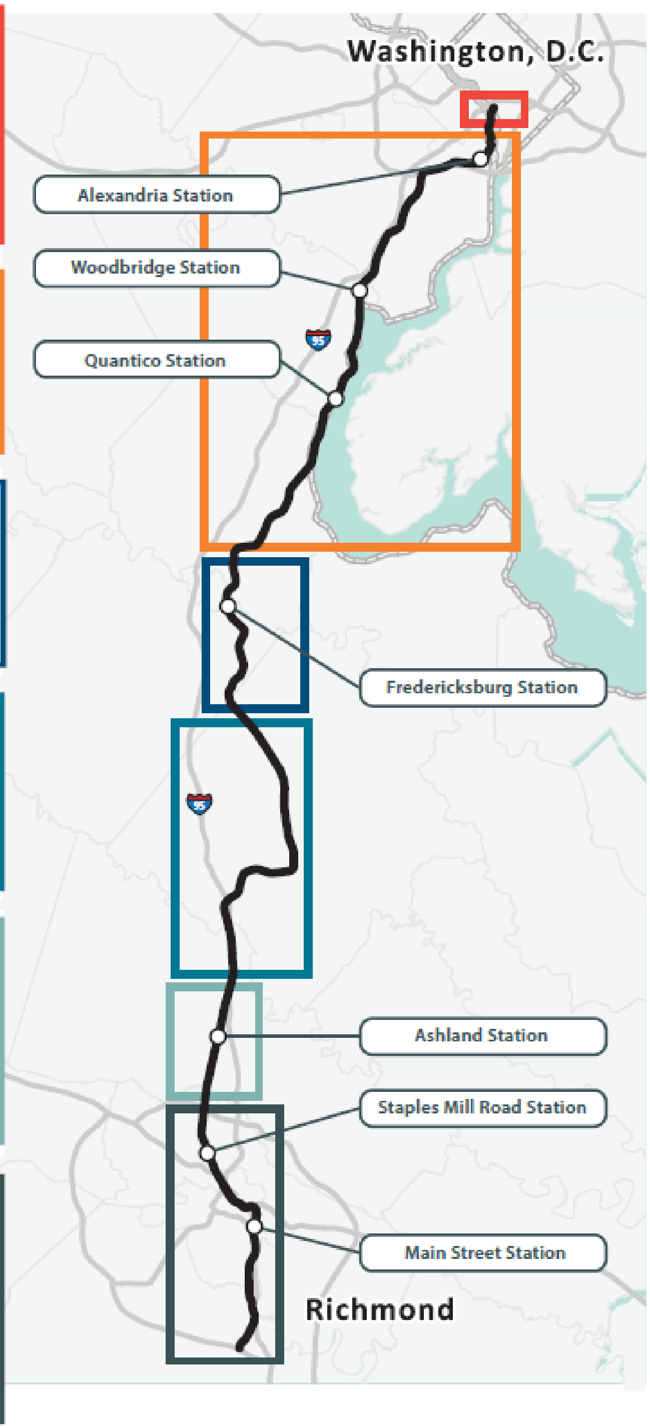
ALTERNATIVE AREA 2: NORTHERN VIRGINIA
Location: CFP 109.3 - CFP 062
Recommendation: Alternative 2A
Add a Third or Fourth Track
Approximate Length: 47.3 Miles

ALTERNATIVE AREA 3: FREDERICKSBURG
Location: CFP 062 - CFP 048
Recommendation: Alternative 3B
Add a Third Main Track through City
Approximate Length: 14 Miles

ALTERNATIVE AREA 4: CENTRAL VIRGINIA
Location: CFP 048 - CFP 019
Recommendation: Alternative 4A
Add a Third Main Track
Approximate Length: 29 Miles

ALTERNATIVE AREA 5: ASHLAND
Location: CFP 019 - CFP 009
Recommendation: Alternative 5A Maintain Two Tracks Through Town, Add a Third Main Track north and south of Town
Approximate Length: 10 Miles

ALTERNATIVE AREA 6: RICHMOND
Location: CFP 009 - A011 Centralia
Recommendation: Alternative 6F
Main Street Station
and Staples Mill Road Station
Full Service with S-Line Improvements
Approximate Length: 23 Miles



Washington, D.C.
Alexandria Station
Woodbridge Station
Quantico Station
95
Fredericksburg Station
95
Ashland Station
Staples Mill Road Station
Main Street Station
Richmond

APPENDIX I

DC2RVA RECOMMENDATION REPORT

D.C. TO RICHMOND SOUTHEAST HIGH SPEED RAIL

U.S. Department
of Transportation

Federal Railroad Administration

1200 New Jersey Avenue, SE.
Washington, D.C. 20590

September 27, 2018

Jennifer L. Mitchell
Director, Department of Rail and Public Transportation
600 East Main Street, Suite 2102
Richmond, VA 23219

Dear Ms. Mitchell:

The Federal Railroad Administration (FRA) has received and accepted the Recommendation Report prepared by the Virginia Department of Rail and Public Transportation (DRPT) for the Southeast High Speed Rail, Washington, DC to Richmond, VA Tier II Environmental Impact Statement (EIS) – DC2RVA Project. FRA's acceptance of the Commonwealth's recommendation supports DRPT's advancement of a Recommended Preferred Alternative in the forthcoming Final EIS for the Project. DRPT prepared the report as a record of the Commonwealth's Recommended Preferred Alternative for the Project, as defined in the Tier II Draft EIS for the Project, published on September 8, 2017, and as further refined in the report.

The Project extends for 123 miles along the CSX Transportation (CSXT) railroad corridor from the Potomac River in Arlington, VA through Richmond to Centralia, VA. In the Draft EIS, FRA and DRPT defined the corridor in six alternative areas from north to south, each with unique existing conditions, constraints or needs. The alternative areas and DRPT's corresponding Recommended Preferred Alternatives are listed below.

Area 1: Arlington (Long Bridge Approach), Milepost 110 to 109.3
Recommended Preferred Alternative Deferred to Final EIS

Area 2: Northern Virginia (Arlington to Fredericksburg), Milepost 109.3 to 62
Build Alternative 2A, Add One Track / Improve Existing Track

Area 3: Fredericksburg (Dahlgren Spur to Crossroads), Milepost 62 to 48
Build Alternative 3B, Add One Track East of Existing

Area 4: Central Virginia (Crossroads to Doswell), CSXT Milepost 48 to 19
Build Alternative 4A, Add One Track / Improve Existing Track

Area 5: Ashland (Doswell to I-295), CSXT Milepost 19 to 9
Recommended Preferred Alternative Deferred to Final EIS

Area 6: Richmond (I-295 to Centralia), Milepost 9 to A11

Build Alternative 6F, Full Service Staples Mill Road/Main Street Stations

DRPT did not define a Recommended Preferred Alternative for Area 1 in Arlington or Area 5 through Ashland in the Draft EIS due to the need for additional study or public outreach in these sections.

For Area 1, the Draft EIS defined three Build Alternative configurations that would connect to the Long Bridge over the Potomac River and carry the service operated on the DC2RVA Corridor north to Washington, D.C. FRA, in partnership with the District Department of Transportation (DDOT), is preparing a separate EIS for the Long Bridge Project (http://longbridgeproject.com/), which is a study to provide additional long-term railroad capacity and improve the reliability of railroad service through the Long Bridge Corridor. At the time of preparation of the Draft EIS, the Long Bridge study had advanced multiple options for an expanded four-track crossing of the river, which generally oriented on three alignments "upstream," "downstream," or centered upon the existing bridge. The Draft EIS for the Project defined three Build Alternatives for Area 1, each connecting to one of the three alignments proposed in the Long Bridge study. The Project includes the expanded capacity over the Long Bridge in its No-Build Alternative and baseline infrastructure; therefore, DRPT was unable to define a Recommended Preferred Alternative for Area 1 in the Draft EIS until the Long Bridge Study defined a preferred alternative for the connecting project.

For Area 5, the Draft EIS evaluated seven Build Alternatives to provide additional rail capacity through Hanover County and the Town of Ashland to support the development of the service proposed in the Project. The seven alternatives reflect four general alignment options as listed below.

5A: Maintain Two Tracks Through Town
Construct a third track primarily on the west side of the CST right-of-way for 3.1 miles north and 4.7 miles south of Ashland and retain the existing two-track alignment for 2.2 miles through town.

5B: Add One Track East of Existing
Construct a third track primarily on the west side of the CSXT right-of-way for 3.1 miles north and 4.7 miles south of Ashland and add a third track on the east side of the right-of-way for 2.2 miles through town.

5C: Add Two-Track West Bypass
Construct a third track on the west side of the CSXT right-of-way for one mile north and three miles south of Ashland and construct a new double-track bypass for eight miles in Hanover County to the west of Ashland.

5D-Ashcake: Three Tracks Centered Through Town (Relocate Station to Ashcake)
Construct a third track primarily on the west side of the CSXT right-of-way for 3.1 miles north and 4.7 miles south of Ashland and add a third track with a

realignment of the existing tracks for 2.2 miles through town.

DRPT elected not to define a Recommended Preferred Alternative for Area 5 in the Draft EIS to allow for additional community participation in the development, evaluation and recommendation for selection of a Preferred Alternative in Hanover County and the Town of Ashland. Prior to and concurrent with the public comment period for the Draft EIS, DRPT established the Ashland/Hanover Area Community Advisory Committee (CAC) to advise and inform DRPT on DC2RVA alternatives and issues in the Ashland/Hanover County area. The CAC included representatives from the Town of Ashland, Hanover County, CSX Transportation, Randolph-Macon College and the Richmond Regional Transportation Planning Organization. The CAC met monthly from May through September 2017 for a total of five meetings, which were open to the public. Recognizing that the improvements proposed in each of the alternatives considered in Area 5 generated community concerns, DRPT and the CAC defined three "least objectionable" alternatives, as listed below.

5A: Maintain Two Tracks Through Town "3-2-3 Option"
Similar to Build Alternative 5A, but with further minimization of Project infrastructure, primarily retaining the Amtrak Station at its existing station between England Street and College Avenue. The station would include two approximately 350-foot platforms as proposed for improvement under a separate project between Amtrak, the Town of Ashland, DRPT and CSXT.

5C: Add Two-Track West Bypass "Modified Alignment"
Similar to Build Alternative 5C, but with on a modified alignment closer to the Town of Ashland, which was previously eliminated from consideration during the Alternative Analysis phase of the Draft EIS. The new alignment would avoid impacts to a commercial facility and reduce impacts to residential properties.

Three-Track Trench
Following the alignment of Alternative 5D, this alternative would construct three tracks in a trench below grade through the center of town.

Concurrent with the publishing of the Draft EIS and CAC process, and at FRA's request, DRPT prepared supplemental operations analysis of the DC2RVA Corridor including the three primary configurations considered through Area 5 (two or three tracks through town and a two-track bypass) to evaluate the ability of the proposed infrastructure to deliver the passenger service defined in the Project as well as forecasted growth of CSXT freight service through 2045. The supplemental analysis demonstrated that a DC2RVA Corridor with expanded capacity in Area 5 via either a two-track bypass of or a triple-track route through Ashland would operate most efficiently; however, an alternative with a two-track segment for approximately two miles through Ashland would also meet the Purpose and Need of the Project. Although the alternatives constructing either a two-track bypass or adding a third track through town would provide the greatest benefits (highest speed, shortest trip time and least delays), DRPT determined that the costs and impacts to build these alternatives was not commensurate with the benefits. DRPT describes the supplemental operations analysis process in detail in the Recommendation Report. FRA has reviewed the Recommendation Report prepared by DRPT and concurs with the Commonwealth's recommendation to advance Build Alternative 5A (Maintain Two Tracks Through Town) as the Preferred Alternative for Area 5 in the Final EIS for the Project. Alternative 5A, as part of the program of improvements through the DC2RVA Corridor provides the infrastructure required to meet the Purpose and Need of the Project. Additionally, Alternative 5A will avoid impacts to Section 4(f) parks or historic properties, which NEPA requires FRA to select as an "avoidance" alternative.

Although DRPT did not include a Recommended Preferred Alternative for Area 1 in the report, FRA understands that DRPT intends to advance Alternative 1B (Add Two Tracks on the West) in the Final EIS. On June 19, 2018, DDOT published the *Long Bridge Project EIS Alternatives Development Report*, which identifies the alternatives that will be carried forward into the Long Bridge Draft EIS, all of which propose the construction of additional capacity upstream from the existing bridge. The upstream alternatives align with DC2RVA Alternative 1B, which includes two new tracks generally on the west side of the CSXT right-of-way in Area 1 south of the Potomac River.

With the Recommended Preferred Alternatives for Areas 2, 3, 4 and 6 presented in the Draft EIS, and the advancement of Alternative 5A in Area 5 and Alternative 1B in Area 1, the Final EIS for the Project will define a contiguous Recommended Preferred Alternative for the entirety of the DC2RVA Corridor as listed below.

Area 1: Build Alternative 1B, Add Two Tracks on the West
Area 2: Build Alternative 2A, Add One Track / Improve Existing Track
Area 3: Build Alternative 3B, Add One Track East of Existing
Area 4: Build Alternative 4A, Add One Track / Improve Existing Track
Area 5: Build Alternative 5A, Maintain Two Tracks Through Town
Area 6: Build Alternative 6F, Full Service Staples Mill Road / Main Street Stations

Thank you for your cooperation through the development of the DC2RVA Project. If you have any questions, please contact FRA's Southeast Project Manager, Randy Brown, at 202-309-4065 or randall.brown@dot.gov.

Sincerely,

Michael Johnsen

1 INTRODUCTION

This report presents the recommendations of the Commonwealth Transportation Board (CTB) and the Virginia Department of Rail and Public Transportation (DRPT) for the Recommended Preferred Alternative for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project. The purpose of the DC2RVA Project is to increase capacity to deliver higher speed passenger rail, support the expansion of commuter rail, and accommodate growth of freight rail service in an efficient and reliable multimodal rail corridor. These recommendations are based on the alternative's ability to meet the Project's Purpose and Need, consideration of impacts to the human and natural environment, costs, and operability/constructability, along with the public and agency comments received following the publication of the Tier II Draft Environmental Impact Statement (EIS) for the DC2RVA Project on September 8, 2017.

DRPT has prepared this Recommendation Report to document the Commonwealth's Recommended Preferred Alternative for the DC2RVA Project, as defined in the Draft EIS and further refined in this report, and to seek concurrence from the Federal Railroad Administration (FRA) on this recommendation. Subject to FRA approval, DRPT will advance the Commonwealth's Recommended Preferred Alternative as the Preferred Alternative for the DC2RVA Project in the Final EIS.

DRPT acknowledges that this Recommendation Report, or FRA concurrence with this report, is non-binding. FRA, as the lead Federal agency for the preparation of the EIS under the National Environmental Policy Act (NEPA), will formally define the Preferred Alternative in the Final EIS and Record of Decision (ROD) for the DC2RVA Project. The Final EIS will provide detailed responses to the many comments received on the Draft EIS and will document the impacts of the Project on the human and natural environments. The ROD will confirm the Preferred Alternative for the Project as defined in the Final EIS. The Project cannot be advanced until FRA has signed the ROD.

2 RECOMMENDED PREFERRED ALTERNATIVE

2.1 PROJECT OVERVIEW

The FRA and Virginia DRPT are working to improve intercity passenger rail service in the north-south corridor between Washington, D.C. and Richmond, VA. These passenger rail service and rail infrastructure improvements are collectively known as the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project. The purpose of the DC2RVA Project is to increase capacity to deliver higher speed passenger rail, support the expansion of commuter rail, and accommodate growth of freight rail service in an efficient and reliable multimodal rail corridor. The DC2RVA Project will enable passenger rail to be a competitive transportation choice for intercity travelers between Washington, D.C. and Richmond, and beyond. The DC2RVA Project extends 123 miles along an existing rail corridor owned by CSX Transportation (CSXT) from Arlington, VA, (CSXT control point RO at milepost CFP 110.1, in Arlington County just south of the Long Bridge across the Potomac River) to Richmond, Virginia (CSXT control point Centralia at milepost S 10.9, in Chesterfield County south of Richmond).

The proposed improvements of the DC2RVA Project include the following:

- Construct additional main line tracks and track crossovers
- Straighten curves in existing tracks to allow for higher speeds
- Improve intercity passenger rail stations and station areas
- Improve sidings and signals
- Implement roadway crossing safety improvements
- Add an additional nine passenger train round trips in the corridor

The DC2RVA Project is being evaluated by FRA and DRPT through the framework of an EIS to satisfy the requirements of NEPA. NEPA requires projects that have a federal nexus and may have a significant impact on the natural and/or built environment to be evaluated through a rigorous process that allows the public to understand and comment on the benefits and impacts of the project. On September 8, 2017, FRA released the DC2RVA Tier II Draft EIS for public review and comment. The Draft EIS documents the environmental effects of the proposed DC2RVA improvements along with measures to avoid, minimize, and otherwise mitigate those effects. The Draft EIS evaluates multiple alternatives defined in six areas of the 123-mile corridor and includes DRPT's recommendations for a preferred alternative by area. The public comment period for the Draft EIS ended November 7, 2017. DRPT held five public hearings and conducted additional public outreach to answer questions and solicit public comments during the comment period.

Virginia's CTB establishes the administrative policies and oversees transportation projects and initiatives for the Commonwealth's transportation system. The CTB, made up of 17 members appointed by the governor, allocates transportation funding to specific projects, locates routes, and considers funding for highways, rail, and public transportation projects. The CTB Rail Committee, a subgroup of the CTB, meets separately and works with DRPT staff on policies, procedures, special projects, and reports related to rail.

Based on agency and public comments on the Draft EIS and additional public outreach, the CTB voted in December 2017 to adopt DRPT's Recommended Preferred Alternative as the Commonwealth's Recommended Preferred Alternative for improvements along the DC2RVA corridor.

2.2 RECOMMENDED PREFERRED ALTERNATIVE AND RATIONALE

The Draft EIS included DRPT's Recommended Preferred Alternative for the majority of the DC2RVA Project with the exception of Areas 1 and 5. DRPT deferred the recommendation of a preferred alternative for Area 1 until the completion of a separate EIS for the Long Bridge over the Potomac River. This report confirms DRPT's Recommended Preferred Alternative from the Draft EIS with the inclusion of Build Alternative 5A in Ashland, and continued the deferral of a recommendation for Area 1 until an alignment for the construction of additional capacity over the Long Bridge is determined in a separate study, the Long Bridge Project Alternatives Development Report, being conducted by FRA and the District of Columbia Department of Transportation (DDOT). After completion of the public review and comment period for the Draft EIS, DRPT presented the Recommended Preferred Alternative for the full DC2RVA Project with the deferral of a decision for Area 1 to the CTB in November 2017, which the CTB endorsed as the Commonwealth's Recommended Preferred Alternative in its December 6, 2017, resolution (Attachment A). The Commonwealth's Recommended Preferred Alternative is based on the following findings as they support the Purpose and Need for the DC2RVA Project:

- Expanded passenger, commuter, and freight service on the corridor is an important component to addressing congestion in the I-95 corridor.
- Northern Virginia has the most rail traffic congestion in the corridor and is the DC2RVA priority for implementation.

In determining its Recommended Preferred Alternative, the Commonwealth fully considered the Project's Purpose and Need, all of the information and analysis contained in the Draft EIS, the comments received during the formal comment period and through the Town of Ashland/Hanover County Community Advisory Committee (CAC) process, and the additional infrastructure validation and operations modeling conducted in support of the Project. DRPT evaluated impacts to the natural and human environment and assessed information on intercity passenger rail ridership, rail operations, cost, and constructability for each alternative. The Recommended Preferred Alternative was informed by extensive outreach and communications undertaken with the public, stakeholders, and elected officials in the DC2RVA corridor, plus prior corridor studies, including the 2002 Southeast High Speed Rail (SEHSR) Tier I EIS and ROD.

The Commonwealth's Recommended Preferred Alternative includes a service plan that would improve the reliability of the intercity passenger service while adding nine additional daily intercity passenger round trips (18 trains per day). Four of these new round trips would provide regional service from Hampton Roads through Richmond to Amtrak's Northeast Corridor (NEC). One new round trip would originate at Richmond's Main Street Station. An additional four round trips would provide interstate service from North Carolina through Virginia, continuing on to Amtrak's NEC. From Washington, D.C., DRPT intends for all of the new trains to continue on to Philadelphia, New York, and Boston, subject to available capacity and future operating schedules on the NEC. The service plan also includes a maximum authorized passenger train speed for the corridor of 90 mph with a reduced trip time (where practicable), and improved on-time performance of the intercity passenger train service.

In the Draft EIS, DRPT evaluated rail alignment Build Alternatives in six areas along the DC2RVA corridor, as well as the No Build Alternative. In the SEHSR Tier I EIS, FRA and the Federal Highway Administration (FHWA) determined that the No Build Alternative did not meet the Tier I Purpose and Need of the Project, but it was included in the DC2RVA Draft EIS to provide a basis for comparison with the Build Alternatives. Each of the six alternative areas contains one or more Build Alternatives that include rail alignment and associated roadway and station work. The Recommended Preferred Alternative is a combination of one Build Alternative from each of the six alternative areas to form a contiguous "best-fit" alternative for the 123-mile DC2RVA corridor.

All alternatives selected meet the DC2RVA Purpose and Need to increase railroad capacity between Washington, D.C., and Richmond to deliver higher speed passenger rail, support the expansion of commuter rail, and accommodate growth of freight rail service in an efficient and reliable multimodal rail corridor. Adding capacity supports increased frequency, improved reliability, and reduced travel time of passenger rail operations in Virginia and beyond.

DRPT seeks FRA concurrence on the Commonwealth's Recommended Preferred Alternative as defined in the Draft EIS and further refined in this Recommendation Report, including:

Area 1: Retain Alternatives 1A, 1B, and 1C;

Area 2: Build Alternative 2A, Add One Track / Improve Existing Track;

Area 3: Build Alternative 3B, Add One Track East of Existing;

Area 4: Build Alternative 4A, Add One Track / Improve Existing Track;

Area 5: Build Alternative 5A, Maintain Two Tracks Through Town; and

Area 6: Build Alternative 6F, Full Service Staples Mill Road / Main Street Stations.

FRA and DRPT did not include a Recommended Preferred Alternative for Area 5 in the Draft EIS; however, after consideration of comments received on the Draft EIS and through the CAC process, the Commonwealth recommends including Build Alternative 5A (Maintain Two Tracks Through Town) as the Preferred Alternative through Ashland. Subject to FRA approval and documentation in the Final EIS and ROD, the Preferred Alternative for the DC2RVA Project will include a contiguous 123-mile route consisting of Build Alternatives 1A/1B/1C, 2A, 3B, 4A, 5A and 6F.

The following summarizes some of the key considerations by the CTB in developing their Recommended Preferred Alternative within each Alternative Area:

Alternative Area 1: Arlington (Long Bridge Approach)

Virginia recognizes the critical importance of increasing rail capacity across the Potomac River at the Long Bridge north of Arlington and is working with FRA, DDOT, and other stakeholders to evaluate alternatives that address this issue in a separate EIS. DRPT identified the approximately one-mile Alternative Area 1 immediately south of the Long Bridge to evaluate potential connections between the DC2RVA corridor and the future recommendation from the separate Long Bridge EIS. In the Draft EIS, DRPT evaluated three alternatives to add two tracks within existing CSXT right-of-way to connect to multiple future Long Bridge recommendation options:

- 1A. Add two tracks east
- 1B. Add two tracks west
- 1C. Add one track west and one track east

Each of these Area 1 alternatives supports expanded intercity passenger service, VRE commuter service, and CSXT freight service. All project improvements in Area 1 are within existing CSXT-owned right-of-way.

The Commonwealth recommends that FRA defer selection of a preferred alternative in Area 1 through Arlington in the Final EIS and ROD for the DC2RVA Project until determination of an alignment for the construction of additional capacity over the Long Bridge in a separate EIS being conducted by FRA/DDOT. The Long Bridge Project Alternatives Development Report is expected to be released later this year and include a recommended preferred alternative.

Alternative Area 2: Northern Virginia

Alternative Area 2 is the most congested area on the rail corridor, with intercity passenger trains, VRE commuter trains, and CSXT freight trains occupying space on the existing tracks. This 47.3-mile area of the corridor, from Crystal City to Fredericksburg, also passes through developed urban areas and crosses several major rivers, including at the Occoquan River, Neabsco Creek, Powells Creek and Aquia Creek. In the Draft EIS, DRPT considered and dismissed alternative alignments that increased speed and/or capacity but extended outside the CSXT right-of-way in Area 2 in order to reduce impacts to property, wetlands, and existing infrastructure. The Commonwealth recommends Alternative 2A, which would add a fourth track to the triple-track section from Crystal City to Alexandria and add a third track in locations that currently have only two tracks from Alexandria to Fredericksburg. The recommended preferred alternative would support expanded intercity passenger service, VRE commuter service, and CSXT freight service. Project improvements are largely within existing CSXT-owned right-of-way, and locations of river crossings have been carefully selected to reduce impacts to natural and built resources. The recommended preferred alternative increases passenger train speeds where practicable while keeping project improvements within the CSXT-owned right-of-way; speed increases are variable, with increased speeds of 80 to 90 mph achieved in some sections.

The Commonwealth's Recommended Preferred Alternative for Area 2 is Build Alternative 2A (Add One Track / Improve Existing Track), as defined in the Draft EIS, and the Commonwealth seeks FRA concurrence to adopt this as the Preferred Alternative for Area 2 through Northern Virginia in the Final EIS for the DC2RVA Project.

Alternative Area 3: Fredericksburg

Alternative Area 3 extends approximately 14 miles through Fredericksburg, from the Dahlgren Spur just north of the Rappahannock River to VRE's Spotsylvania Station at Crossroads, VA. The corridor in this area crosses the Rappahannock River, passes through the City of

Fredericksburg, and traverses extensive historic and cultural resources including the Fredericksburg National Military Park. In the Draft EIS, DRPT screened multiple bypass alignments, and evaluated three alternatives in detail:

- 3A. Maintain Two Tracks Through Town
- 3B. Add One Track Through Town East of Existing Tracks
- 3C. Add a Two-Track Bypass East of Town

Maintaining two tracks through the City of Fredericksburg (and therefore having only two platform edges at the Fredericksburg Station) does not provide sufficient capacity to support increased intercity passenger service, support VRE commuter service, and accommodate CSXT freight service through the City, and does not meet Purpose and Need of the Project. Adding a two-track bypass to the east of the City does provide sufficient capacity, but would incur substantial impacts to wetlands, historic and cultural resources, property, and infrastructure. In addition, there was strong local opposition to a new greenfield bypass. Therefore, the Commonwealth recommends Alternative 3B to add a third main track to link existing sections of three or more tracks and provide a continuous three track corridor through the City. Alternative 3B provides the capacity to support intercity passenger service, VRE commuter service, and CSXT freight service. This alternative would have fewer impacts to property, wetlands, and infrastructure than a bypass, and occurs largely within the existing CSXT-owned right-of-way. Alternative 3B supports past and ongoing investments by the Commonwealth and VRE, and has local government support.

The Commonwealth's Recommended Preferred Alternative for Area 3 is Build Alternative 3B (Add One Track East of Existing), as defined in the Draft EIS, and the Commonwealth seeks FRA concurrence to adopt this as the Preferred Alternative for Area 3 through Fredericksburg in the Final EIS for the DC2RVA Project.

Alternative Area 4: Central Virginia

Alternative Area 4 extends approximately 29 miles, from Spotsylvania to Doswell, through a largely rural area with multiple small waterway crossings and extensive wetlands. This portion of the corridor represents the best opportunity for passenger trains to achieve and maintain the 90 mph maximum achievable speed. In the Draft EIS, DRPT screened multiple alignments to improve capacity and reach the 90 mph speed, while minimizing impacts to wetlands, waterways, and other resources. DRPT carried one alternative forward for further evaluation in the Draft EIS—Alternative 4A, which adds a third main track to the west of the existing two tracks through most of Area 4, increases passenger train speed, and would put project improvements largely within the existing CSXT-owned right-of-way. The Commonwealth recommends Alternative 4A. The recommended preferred alternative would support expanded intercity passenger service and CSXT freight service, while minimizing impacts to wetlands and property.

The Commonwealth's Recommended Preferred Alternative for Area 4 is Build Alternative 4A (Add One Track / Improve Existing Track), as defined in the Draft EIS, and the Commonwealth seeks FRA concurrence to adopt this as the Preferred Alternative for Area 4 through Central Virginia in the Final EIS for the DC2RVA Project.

Alternative Area 5: Ashland

Alternative Area 5 extends approximately 10 miles along the CSXT corridor, from Doswell to I-295. Near the center of Area 5, the existing two-track main line runs at-grade for approximately two miles on very narrow right-of-way through the center of Railroad Avenue/Center Street in the Town of Ashland. DRPT conducted extensive public outreach in the Ashland/Hanover County area, and during development of the Draft EIS screened multiple at-grade, above-ground, below-ground, and bypass alignments, including use of the existing Buckingham Branch Railroad east of I-95. In the Draft EIS, DRPT evaluated seven alternatives in detail:

- 5A. Maintain Two Tracks Through Town (3-2-3 Option)
- 5A–A. Maintain Two Tracks Through Town (Relocate Station to Ashcake)
- 5B. Add One Track Through Town East of Existing Tracks
- 5B–A. Add One Track Through Town East of Existing Tracks (Relocate Station to Ashcake)
- 5C. Add Two-Track Western Bypass
- 5C–A. Add Two-Track Western Bypass (Relocate Station to Ashcake)
- 5D–A. Three Tracks Centered Through Town (Add One Track), Relocate Station to Ashcake

During preparation of the DC2RVA Draft EIS, DRPT recognized that many of the alternatives for greater rail capacity in the Town of Ashland and Hanover County area generated community concerns. DRPT subsequently established the Ashland/Hanover Area Community Advisory Committee (CAC) to advise and inform DRPT on DC2RVA alternatives and issues in the Ashland/Hanover County area. The CAC was tasked with reassessing all previous options considered for greater rail capacity in the Ashland/Hanover County area and identifying potential options that could meet the Purpose and Need of the DC2RVA Project, while also minimizing or avoiding potential impacts to the community. The CAC process was initiated to run in parallel to the Draft EIS. The Committee was specifically requested to:

- Review all alternatives studied to date as presented in the Draft EIS.
- Recommend alternative(s), including new alternatives or modifications to alternatives, to meet the DC2RVA Purpose and Need.
- Identify and represent the concerns of members' communities.
- Apply a structured and transparent approach seeking consensus.

After careful and deliberate consideration of over 30 options for greater rail capacity in the Ashland/Hanover area, the CAC was unable to reach consensus on a community preferred alternative, but did agree that the following were the least objectionable options for each category of alternatives. The CAC identified the following Least Objectionable Alternatives:

- Alternative 5A – The option to add a third track north and south of town and maintain two tracks through town (3-2-3 option) was the least objectionable option for adding rail capacity through the Town of Ashland at-grade.
- Three-Track Trench – An option to construct a three-track trench emerged through the CAC process as a variant of Alternatives 5B-Ashcake and 5D-Ashcake to construct three

tracks through the Town of Ashland, and was the least objectionable option for adding capacity below grade. This option would close the downtown Ashland station.

- Modified Alternative 5C and 5C-Ashcake – The western bypass closest to the Town of Ashland, which was identified as AWB 1 and screened out in the Draft EIS, was the least objectionable option for adding rail capacity outside the Town of Ashland as a variant of Alternative 5C and 5C-Ashcake —with the provision that the alignment would be adjusted to avoid directly impacting a commercial facility, and to minimize impacts to residential properties.

Based on the information and analyses of the seven Build Alternatives presented for Area 5 in the Draft EIS, public comments on the Draft EIS, and information and comments developed through the CAC process, and subsequent infrastructure validation and rail operations analyses, the Commonwealth recommends Alternative 5A as the Preferred Alternative for Area 5. Alternative 5A provides sufficient capacity to support intercity passenger rail service and CSXT freight service while keeping improvements largely within existing CSXT-owned right-of-way. Alternative 5A has the least impact on property, wetlands and other natural resources, historic and cultural resources, and the built environment compared to other project alternatives that meet the Purpose and Need. Alternative 5A also best addresses the larger Ashland/Hanover community's concerns, including strong opposition to a bypass from Hanover County residents, and strong opposition to adding a track through Ashland from Town residents and Randolph-Macon College.

In comparison to Area 3 through Fredericksburg, the Commonwealth determined that two tracks and two platform edges at the existing Ashland Amtrak station provide sufficient capacity in Ashland, but would be insufficient in Fredericksburg. The rail corridor through Fredericksburg is more congested with greater train volumes and levels of service at the station. In Fredericksburg, the existing tracks and platforms serve 16 daily VRE commuter trains (8 round trips) in addition to intercity passenger trains and CSX freight trains. While the same intercity passenger trains pass through both Fredericksburg and Ashland, more trains stop in Fredericksburg. Therefore, the Commonwealth determined that two tracks would be sufficient for the Project in Ashland.

The Commonwealth's Recommended Preferred Alternative for Area 5 is Build Alternative 5A (Maintain Two Tracks Through Town), as defined in the Draft EIS, and the Commonwealth seeks FRA concurrence to adopt this as the Preferred Alternative for Area 5 through Ashland in the Final EIS for the DC2RVA Project.

Alternative Area 6: Richmond

In the Richmond area, DRPT identified alternatives by station location and service combinations along the two main north-south rail routes through the City: the CSXT A-Line on the west and the CSXT S-Line running through the city center. DRPT evaluated eight Build alternatives for Area 6 in the Draft EIS —five are single station alternatives and three are two-station alternatives:

- 6A. Staples Mill Road Station Only (A-Line)
- 6B–A-Line. Boulevard Station Only (A-Line)
- 6B–S-Line. Boulevard Station Only (S-Line)
- 6C. Broad Street Station Only (A-Line)

- 6D. Main Street Station Only (S-Line)
- 6E. Split Service, Staples Mill Road/Main Street Stations (A-Line)
- 6F. Full Service, Staples Mill Road/Main Street Stations (S-Line)
- 6G. Shared Service, Staples Mill Road/Main Street Stations (A-Line and S-Line)

Richmond area alternatives that would rely on the A-Line (Alternatives 6A, 6B–A-Line, 6C, 6E, and 6G) to carry additional passenger service were eliminated from further consideration in the Draft EIS as being unable to meet the Project's Purpose and Need. Rail operations analyses show that passenger and freight rail performance goals cannot be met using the A-Line without additional track capacity; however, the existing A-Line through Richmond runs in a trench down the middle of I-195, which itself is within a trench. These alternatives would also require a new third track on a bridge across the James River. An additional track cannot be added to the A-Line without expanding both the rail trench and the I-195 trench, creating extensive infrastructure and property impacts.

The three Richmond area alternatives that rely on the S-Line (Alternatives 6B–S-Line, 6D, and 6F) were retained primarily because they would consolidate passenger service on the S-Line through downtown Richmond leaving the A-Line primarily for CSXT freight operations. Although the S-Line route from Centralia to Staples Mill Road is one mile longer than the A-Line and passes through the urbanized core of Richmond, there is more opportunity to construct necessary capacity improvements on the S-Line than on the A-Line. Additionally, the S-Line alternatives 6D and 6F allow for the expansion of intercity passenger rail service to Richmond Main Street Station, which is nearer to the City's Central Business District.

Alternative 6B–S-Line Boulevard Station Only (S-Line) is feasible and could meet the DC2RVA passenger and freight service performance goals. However, the Boulevard Station would not be consistent with prior FRA and Commonwealth decisions regarding the SEHSR program, and does not meet FRA and Amtrak guidance for intercity passenger trains to serve the city center. Furthermore, the Boulevard Station option was not endorsed by political leaders from the City of Richmond or Henrico County.

Alternative 6D. Main Street Station Only (S-Line) would not meet the Project's Purpose and Need due to insufficient track and platform capacity. Spatial constraints posed by support structures for I-95 and the Triple Crossing (an iconic piece of rail infrastructure in Shockoe Bottom where three rail lines cross each other at different elevations in a highly-constrained environment), limit Main Street Station to two tracks and two platform edges on the west side served by the S-Line. For the Main Street Station Only alternative, a third track and three platform edges are required on the west side to support the increased passenger service, including all necessary passenger train crew changes, and meet passenger and freight performance goals. In addition, potential impacts to historic and cultural resources from a third track and expanded platforms are also a concern and would increase the Project's footprint within the area identified for a future memorial to Shockoe Bottom's history as a slave trading district.

Alternative 6F. Full Service, Staples Mill Road/Main Street Stations (S-Line) is feasible and does support passenger service and freight service to meet the Purpose and Need. In this alternative, only Staples Mill Road Station—with three tracks and three platform edges—would provide crew changes. Providing crew changes exclusively at Staples Mill Road Station would reduce the station dwell time at Main Street Station, thereby allowing passenger and freight performance goals to be met while maximizing the number of passenger trains that could stop at Main Street Station. Under the Full Service alternative, Main Street Station would have platform lengths of 850 feet, minimizing the project footprint. Alternative 6F is consistent with prior FRA and Commonwealth decisions regarding the SEHSR program and Main Street Station as Richmond's downtown intercity passenger station, including decisions documented in the SEHSR Tier I ROD (2002), Richmond to Hampton Roads Tier I ROD (2012), and Richmond to Raleigh Tier II ROD (2016). The alternative is also consistent with FRA and Amtrak guidance on providing intercity passenger service to the central business district and the use of a suburban station. Plus, there is strong local support for this alternative, including from the City of Richmond and Henrico County, and the alternative is consistent with their respective comprehensive plans.

The City of Richmond, in written comments made to DRPT concerning the Draft EIS, has requested that Alternative 6F be revised to allow for checked baggage handling and a 1,200-foot platform at Main Street Station. DRPT considered and dismissed adding a third track on the west side of the station due to site constraints and potential impacts to cultural resources in the area. DRPT also considered and dismissed making the west side platforms 1,200 feet long in keeping with the Project's Basis of Design to fully accommodate Long Distance trains due to site constraints and concerns over potential impacts to cultural resources. DRPT instead recommended a reduced platform length of 850 feet plus walkways extending beyond the platform ends on the raised viaducts to provide crew access to the entire train. The 850-foot platforms fully accommodate Northeast Regional and Interstate Corridor trains. The 850-foot platforms do not preclude checked baggage service at Main Street Station. Amenities, including checked baggage service, to be provided at each station for a particular passenger train service will be determined through coordination between Amtrak, its state funding partners, the City of Richmond, and other station stakeholders, and are not included as part of the DC2RVA project.

DC2RVA's Basis of Design, following Amtrak's Station Program and Planning Guidelines (2013), calls for 1,200-foot long platforms for stations servicing Amtrak's Long Distance passenger trains and 850-foot long platforms for stations serving only Regional passenger trains. The Basis of Design matches the length of the platforms to the length of the train consists, with the goal of allowing direct access from the entire train – locomotive, passenger cars, etc. – to the platform with a single stop. Matching the platform length to the train consist optimizes passenger access, and allows crew members to exit the train safely at the station if needed. DRPT considered adding two 1,200-foot long platforms on the west side of Main Street Station that would accommodate the full length of Long Distance trains. However, DRPT determined that two 1,200-foot platforms were not practical on the west side due to physical site constraints and potential impacts to cultural resources. Site constraints that precluded extending the platforms to 1,200 feet include:

- The viaduct on the west side of the station threads between two piers (located at the southwest corner of the station building adjacent to East Main Street) supporting I-95 elevated above the viaduct. These piers physically prevent the west side platforms from extending south.
- Approximately 500 feet north of the renovated train shed, the viaducts pass over E. Broad Street. The vertical clearance for Broad Street beneath the rail viaducts is 13 feet-8

inches, which is less than the VDOT standard of 16 feet-6 inches. Broad Street also slopes upward west of the rail viaducts to climb over I-95. Adding a platform across Broad Street on the west would compound the roadway clearance limitations in order to maintain access to an extended platform.

- The existing rail trestle bridge over Broad Street is an approximately 75-foot thru-truss girder span that prevents access to the tracks from a platform over Broad Street – thus any platform extending north from the station across Broad Street would have an approximately 75-foot gap with no access to the train.

The Project's preliminary conceptual design efforts took into consideration cultural and archeological resources in Shockoe Bottom. Map overlays were created using historic maps and previously identified historic sites to assure that known sites and buildings were included in the analysis. In addition, Project boundaries were compared to the conceptual outlines of the proposed Shockoe Bottom Memorial Park, a proposed memorial to the Richmond slave trade and slave jail, which operated on land in the vicinity of Main Street Station.

Additional trains planned in the DC2RVA Project would follow the current track alignment and remain within the existing CSXT right-of-way in this area. Proposed new tracks would be located on the existing viaducts where tracks existed previously. The only ground disturbance necessary for passenger rail operations in this area would be from support piers for passenger platforms on the east and west side of Main Street Station. These would be constructed adjacent to the existing rail viaduct and would not impact known archaeological sites.

The Project will continue its cultural resource investigations in Shockoe Bottom in the winter and spring of 2018. As this work progresses, the Commonwealth is committed to avoiding sensitive archaeological sites and minimizing the footprint of station infrastructure overall.

Based on the above past study conclusions, FRA guidance, operational considerations, infrastructure modifications to avoid sensitive resources, and DRPT's commitment to minimize the Project footprint to reduce potential impacts to sensitive cultural and archeological resources around Main Street Station, the Commonwealth's Recommended Preferred Alternative for Area 6 is Build Alternative 6F (Full Service Staples Mill Road / Main Street Stations), as defined in the Draft EIS, and the Commonwealth seeks FRA concurrence to adopt this as the Preferred Alternative for Area 6 through Richmond in the Final EIS for the DC2RVA Project.

Figure 2-1 presents the Commonwealth's Recommended Preferred Alternative and includes a brief summary for each alternative area. A more detailed discussion of DRPT's Recommended Preferred Alternative for each alternative area is provided in the following sections.

ALTERNATIVE AREA 1: ARLINGTON (LONG BRIDGE APPROACH)

Location: CFP 110 - CFP 109.3
Recommendation: Defer selection between Alternative 1A, 1B, and 1C until FRA/DDOT makes a recommendation for additional capacity at Long Bridge
Approximate Length: 1 Mile

ALTERNATIVE AREA 2: NORTHERN VIRGINIA

Location: CFP 109.3 - CFP 062
Recommendation: Alternative 2A
Add a Third or Fourth Track
Approximate Length: 47.3 Miles

ALTERNATIVE AREA 3: FREDERICKSBURG

Location: CFP 062 - CFP 048
Recommendation: Alternative 3B
Add a Third Main Track through City
Approximate Length: 14 Miles

ALTERNATIVE AREA 4: CENTRAL VIRGINIA

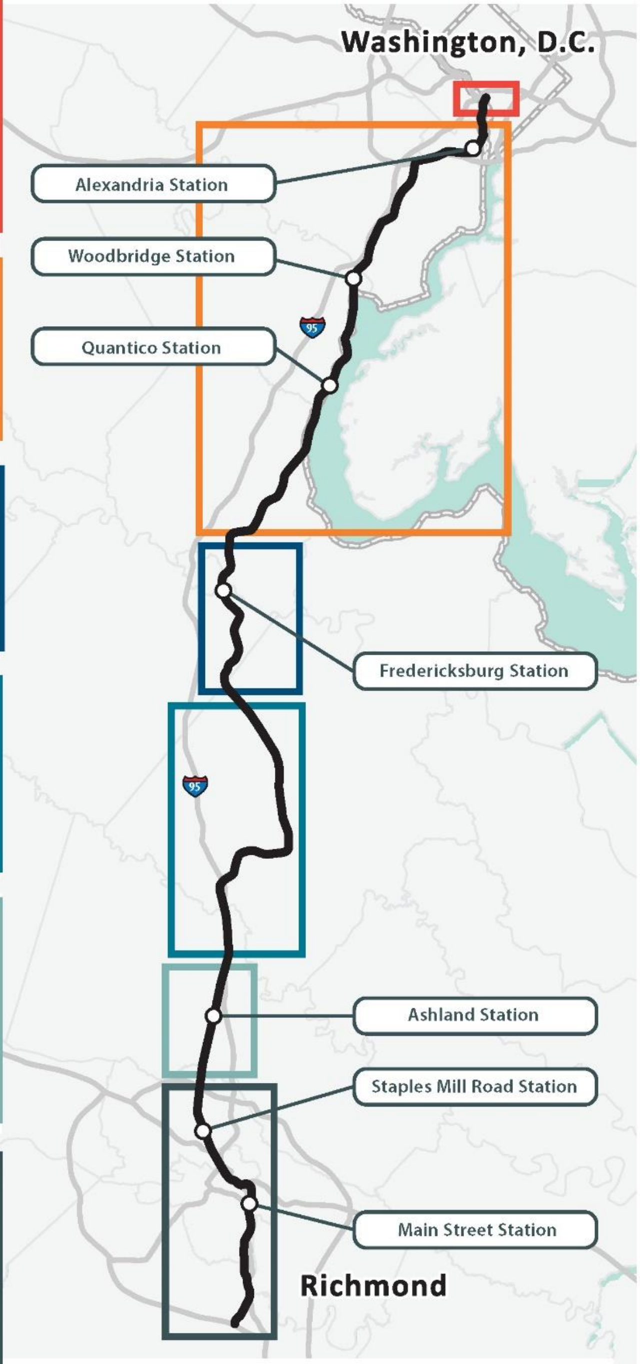
Location: CFP 048 - CFP 019
Recommendation: Alternative 4A
Add a Third Main Track
Approximate Length: 29 Miles

ALTERNATIVE AREA 5: ASHLAND

Location: CFP 019 - CFP 009
Recommendation: Alternative 5A Maintain Two Tracks Through Town, Add a Third Main Track north and south of Town
Approximate Length: 10 Miles

ALTERNATIVE AREA 6: RICHMOND

Location: CFP 009 - A011 Centralia
Recommendation: Alternative 6F
Main Street Station
and Staples Mill Road Station
Full Service with S-Line Improvements
Approximate Length: 23 Miles



Washington, D.C.
Alexandria Station
Woodbridge Station

Ashland Station
Staples Mill Road Station
Main Street Station
Richmond

Figure 2-1: Commonwealth Recommended Preferred Alternative

2.3 ALTERNATIVE AREA 1: ARLINGTON LONG BRIDGE APPROACH—CFP 110 TO CFP 109.3

This less than one-mile-long section of the DC2RVA corridor provides the transition between the DC2RVA corridor and the approach to the Long Bridge across the Potomac River. DRPT is working with FRA and DDOT to evaluate possible alternatives for increasing the rail corridor's capacity across the Potomac River via the Long Bridge as part of a separate EIS (Long Bridge Rail Capacity Study, anticipated to be completed in 2019). The DC2RVA Project assumes that expanded capacity across the Potomac River will be required to accommodate both the future year No Build and Build service plans expanded service south of Washington, D.C.

Figure 2-2: DRPT Recommended Preferred Alternative (Arlington Area)

In the Draft EIS, DRPT evaluated three different configurations for the short section of track south of the Potomac River, which will become the connection between the Long Bridge preferred alternative and the DC2RVA corridor. The maximum authorized speed in this section is designed for 45 mph. DRPT considered the environmental, social, and economic impacts of each of the three Build Alternatives, in addition to each alternative's ability to meet the Project Purpose and Need. DRPT determined that each of the three Build Alternatives (1A, 1B, and 1C, as shown in Figure 2-2) are very similar in their impacts, and there are no overriding issues that would drive DRPT to select one over the other. To avoid unnecessarily limiting the options that could be considered as part of the separate FRA/DDOT Long Bridge Project Alternatives Development Report, DRPT determined that any of the three Build Alternatives would be acceptable and recommends **retaining all three Build Alternatives** in order to support a deferred selection of a preferred alternative to physically align with the preferred alignment of the Long Bridge EIS. DRPT is participating as a cooperating agency in the Long Bridge study.

2.4 ALTERNATIVE AREA 2: NORTHERN VIRGINIA CFP 109.3 TO CFP 62

DRPT determined that additional rail capacity is required in the Northern Virginia area to increase train service and improve reliability. The Draft EIS evaluates the impacts of a single alternative **Build Alternative 2A: Add One Track/Improve Existing Track**. All other alternatives were removed from consideration during the screening process due to their higher levels of impacts to the human and natural environment or they did not meet the Purpose and Need of the Project, as described in the Alternatives Technical Report (Appendix A of the Draft EIS).

As shown in Figure 2-3, Alternative 2A would construct one additional main line track adjacent to the existing tracks in some sections and no additional track in some sections to create a corridor with four interoperable main tracks north of Alexandria and three interoperable main tracks from Alexandria to Fredericksburg. Due to constraints of the geography through this location, the maximum authorized speed by design in this section is 79 mph.

DRPT determined that because this alternative would generally be located within the existing CSXT right-of-way, it avoids impacts to the natural and human resources to the extent practicable. This alternative does have some unavoidable impacts, including those associated with several new bridge crossings of major waterways. Table 2-1 summarizes the performance of Build Alternative 2A against the Purpose and Need evaluation criteria and its impact on the human and natural environment.

Figure 2-3: DRPT Recommended Preferred Alternative (Northern Virginia Area)

Table 2-1: Evaluation of Northern Virginia Area Alternative Against the Purpose and Need and its Impact on the Human and Natural Environment

Purpose and Need Elements & Summary of Factors Considered[1]	2A. Add One Track/Improve Existing Track
Provide an efficient and reliable multimodal rail corridor	
Impacts to human and natural resources:	
Wetland impacts	**5.19 acres**
Section 4(f) park impacts[2]	**0.04 acres**
Historic properties impacts[2]	**1 property**
Right-of-way acquisition	**33 acres**
Residential relocations	**2 residential relocations**
Commercial relocations	**0**
Optimizes cost:	
Construction costs (2025)[3]	**$1,652.6 million**
Increase the capacity of the multimodal rail system through infrastructure improvements	
Increases multimodal rail capacity	**Yes**
Improve the frequency of passenger rail operations (*Refer to Area 6 Richmond for values)*	
Supports ridership demand within the corridor and beyond	**Yes**
Increases passenger train frequency by up to 9 round trips per day	**Yes**
Improve the reliability of passenger rail operations (*Refer to Area 6 Richmond for values)*	
Passenger Train On-Time Performance (2045 OTP)	**Supports the DC2RVA proposed service plan for on-time performance**
Improve the travel time of passenger rail operations (*Refer to Area 6 Richmond for values)*	
Travel time DC-Richmond	**Supports the DC2RVA proposed service plan for reduced travel time**
Accommodate VRE commuter rail service operations	
Accommodates VRE commuter rail service operations	**Incorporates VRE planned infrastructure improvements at VRE stations and integrates VRE schedules.**
Accommodate freight rail service operations	
Freight time delay (2045)	**Does not increase impacts to freight time delay**
Accommodates rail freight future growth, yard operations, access to local customers, and sidings for crew changes and layovers	**Yes**
Improve modal connectivity with other public transportation systems	
Aligns with FRA and Amtrak guidelines for station facilities, and state and local plans	**Yes**
At-grade crossing total daily delay (% change from No Build)	**1% decrease**
Changes in roadway travel patterns (% change in traffic, adjacent roadways at stations)	**<1%**
Improve multimodal rail operations safety	
Grade-separation of public at-grade crossings	**0**
Closure of public at-grade crossings	**1**
Safety improvements of public at-grade crossings (four quadrant gates and/or median treatment)	**2**
New public crossings	**0**
Provides platform and station improvements	**Yes**
Provides upgrades to signals and communication systems	**Yes**
Improve Air Quality & Reduce Greenhouse Gas Emissions (*Refer to Area 6 Richmond for values)*	
Supports reduction of CO2 emissions	**Yes**
Supports decreases in energy consumption	**Yes**

Notes: 1) Refer to Chapters 2 and 4 of the Draft EIS for complete list of factors evaluated and the evaluation results for each Build Alternative. 2) Other avoidance alternatives do not exist that would meet the Purpose and Need for the DC2RVA Project. 3) Does not include rolling stock.

2.5 ALTERNATIVE AREA 3: FREDERICKSBURG DAHLGREN SPUR TO CROSSROADS—CFP 62 TO CFP 48

DRPT evaluated three Build Alternatives in the Fredericksburg area. The Recommended Preferred Alternative (**Build Alternative 3B: Add One Track East of Existing**, as shown in Figure 2-4) would add a new third main line adjacent to the existing tracks on the east, which would provide the capacity needed to increase train service and improve reliability. Due to constraints of the geography through this location, the maximum authorized speed in this section by design is 79 mph where feasible.

BUILD ALTERNATIVE 3B
Add One Track East of Existing
Length: 14 miles Cost: $506.9 million

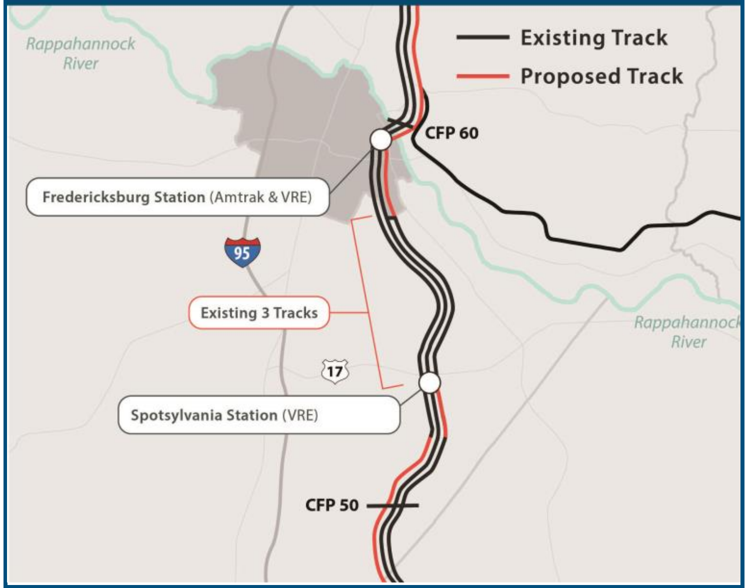

Figure 2-4: DRPT Recommended Preferred Alternative (Fredericksburg Area)

Build Alternative 3A would maintain the existing two tracks through Fredericksburg. DRPT concludes that Build Alternative 3A would not provide the capacity needed to meet the DC2RVA service plan objectives. Build Alternative 3C would construct a two-track bypass to the east of Fredericksburg. While a new bypass would provide the capacity required to meet the DC2RVA service plan objectives, DRPT concludes that, compared with adding a new third main line through Fredericksburg, the bypass alternative would have greater cost and greater impacts to the natural and human environment and would result in more residential relocations.

While the Recommended Preferred Alternative's impacts to historic resources would be greater than the two other Fredericksburg area Build Alternatives, it remains primarily within the existing CSXT right-of-way, and its impacts to wetlands and residential and commercial properties would be substantially lower than the bypass alternative (3C). Both Build Alternatives with additional track include new bridge crossings of the Rappahannock River, a parallel single-track bridge for Build Alternative 3B, and a new double-track bridge for Build Alternative 3C. The construction costs for Build Alternative 3B would be less than the bypass, and Build Alternative 3B is included in the *Fredericksburg Comprehensive Plan*. In summary, DRPT prefers Build Alternative 3B, adding one track in the existing alignment through the city, because it remains primarily within the existing CSXT right-of-way and minimizes overall impacts and costs while still providing improved operations for the DC2RVA corridor. Table 2-2 summarizes the performance of the Fredericksburg area Build Alternatives against the Purpose and Need evaluation criteria and their impact on the human and natural environment.

Table 2-2: Evaluation of Fredericksburg Area Alternatives Against the Purpose and Need and their Impact on the Human and Natural Environment

Purpose and Need Elements & Summary of Factors Considered[1]	**Build Alternatives**		
	3A. Maintain Two Tracks Through Town	**3B. Add One Track East of Existing**	**3C. Add Two-Track Bypass East**
Provide an efficient and reliable multimodal rail corridor			
Impacts to human and natural resources:			
Wetland impacts	5.24 acres	**5.29 acres**	23.82 acres
Section 4(f) park impacts	0	**0**	0
Historic properties impacts (parks and historic properties)[2]	1 property	**5 properties**	1 property
Right-of-way acquisition	2.2 acres	**19.8 acres**	140.5 acres
Residential relocations	0	**0**	19 residential relocations
Commercial relocations	0	**1 commercial relocation**	1 commercial relocation
Optimizes cost:			
Construction costs (2025 $) (millions)[3]	$240.2	**$506.9**	$977.5
Increase the capacity of the multimodal rail system through infrastructure improvements			
Increases multimodal rail capacity	No	**Yes**	Yes
Improve the frequency of passenger rail operations *(Refer to Area 6 Richmond for values)*			
Supports ridership demand within the corridor and beyond	Would not support the DC2RVA proposed service plan of 9 additional round trips	**Supports the DC2RVA proposed service plan of 9 additional round trips**	Supports the DC2RVA proposed service plan of 9 additional round trips
Increases passenger train frequency by up to 9 round trips per day	Yes	**Yes**	Yes
Improve the reliability of passenger rail operations *(Refer to Area 6 Richmond for values)*			
Passenger Train On-Time Performance (2045 OTP)	Does not meet DC2RVA service plan objectives for OTP	**Supports the DC2RVA proposed service plan for on-time performance**	Supports the DC2RVA proposed service plan for on-time performance)
Improve the travel time of passenger rail operations *(Refer to Area 6 Richmond for values)*			
Travel time DC-Richmond	Would not support DC2RVA service plan objectives for improved travel time	**Supports the DC2RVA proposed service plan objectives for improved travel time**	Supports the DC2RVA proposed service plan objectives for improved travel time
Accommodate VRE commuter rail service operations			
Accommodates VRE commuter rail service operations	No	**Yes**	Yes
Accommodate freight rail service operations			
Freight time delay (2045)	Increases freight delay	**Meets DC2RVA objectives for freight impacts**	Increases freight traffic travel time and distance
Accommodates rail freight future growth, yard operations, access to local customers, and sidings for crew changes and layovers	No	**Yes**	Yes

▶ *Continued – see end of table for notes.*

Table 2-2: Evaluation of Fredericksburg Area Alternatives Against the Purpose and Need and their Impact on the Human and Natural Environment

Purpose and Need Elements & Summary of Factors Considered[1]	Build Alternatives		
	3A. Maintain Two Tracks Through Town	3B. Add One Track East of Existing	3C. Add Two-Track Bypass East
Improve modal connectivity with other public transportation systems			
Aligns with FRA and Amtrak guidelines for station facilities, and state and local plans	Yes	**Yes**	Yes
At-grade crossing total daily delay (% change from No Build)	6% increase	**60% decrease**	10% decrease
Changes in roadway travel patterns (% change in traffic, adjacent roadways at stations)	7-8%	**7-8%**	7-8%
Improve multimodal rail operations safety

New grade-separated public crossings	0	**0**	5
Provides platform and station improvements	Yes	**Yes**	Yes
Provides upgrades to signals and communication systems	Yes	**Yes**	Yes
Improve Air Quality & Reduce Greenhouse Gas Emissions *(Refer to Area 6 Richmond for values)*			
Supports reduction of CO2 emissions	Yes	**Yes**	Yes
Supports decreases in energy consumption	Yes	**Yes**	Yes

Notes: 1) Refer to Chapters 2 and 4 of the Draft EIS for complete list of factors evaluated and the evaluation results for each Build Alternative. 2) Other avoidance alternatives do not exist that would meet the Purpose and Need for the DC2RVA Project. 3) Does not include rolling stock.

2.6 ALTERNATIVE AREA 4: CENTRAL VIRGINIA CROSSROADS TO DOSWELL—CFP 48 TO CFP 19

DRPT determined that additional rail capacity is required in the Central Virginia area to increase train service and improve reliability. The Draft EIS evaluates the impacts of constructing one additional main line track adjacent to the existing tracks, identified as **Build Alternative 4A: Add One Track/Improve Existing Track** (as shown in Figure 2-5). DRPT prefers this alternative because it would generally be located within the existing CSXT right-of-way, avoids impacts to natural and human resources to the extent practicable, and provides the greatest contiguous section along the DC2RVA corridor with a maximum authorized speed up to 90 mph. All other alternatives were removed from consideration during the screening process due to their higher levels of impacts to the human and natural environment or they did not meet the Purpose and Need of the Project, as described in the Alternatives Technical Report (Appendix A of the Draft EIS).

Table 2-3 summarizes the performance of Build Alternative 4A against the Purpose and Need evaluation criteria and its impact on the human and natural environment.

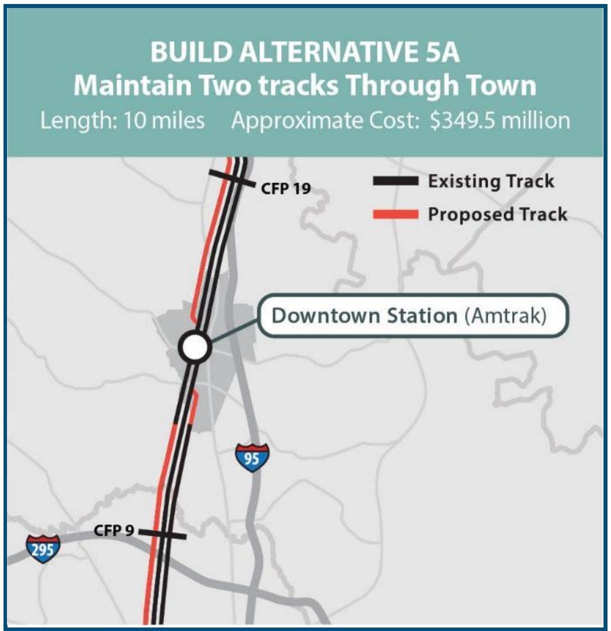
2.7 ALTERNATIVE AREA 5: ASHLAND DOSWELL TO I-295—CFP 19 TO CFP 9



BUILD ALTERNATIVE 5A
Maintain Two tracks Through Town
Length: 10 miles
Approximate Cost: $349.5 million
CFP 19
Existing Track
Proposed Track
Downtown Station (Amtrak)
95
CFP 9
295

Figure 2-6: DRPT Recommended Preferred Alternative (Ashland Area)

DRPT evaluated seven Build Alternatives in the Ashland/Hanover area in the Draft EIS. As identified in the Draft EIS, DRPT conducted extensive outreach, as discussed in Sections 3.1 and 3.3. The Recommended Preferred Alternative (**Build Alternative 5A: Maintain Two Tracks Through Town** (also known as **"3-2-3"**, as shown in Figure 2-6) would maintain the existing two tracks (i.e., no construction of new track) through Ashland, which would be used by freight and passenger trains similar to current conditions. A station stop in Ashland would remain in town, and two public roadway at-grade crossings in Ashland, West Vaughan Road and Ashcake Road, would be grade separated. All other public roadway and/or pedestrian crossings within town remain at-grade, with safety improvements. One new track would be constructed north and south of town, and there are some shifts of existing tracks to improve speed throughout the area. Rail improvements are generally within existing right-of-way. The maximum authorized speed in this section is designed for 90 mph, where feasible. Existing speed restrictions for all trains operating through the Town of Ashland (35 mph during the day, 45 mph at night) would remain.

Build Alternative 5B and 5B-Ashcake would add a new third main line adjacent to the existing tracks on the east through the Town of Ashland, which generally requires additional railroad right-of-way within the town. Similarly, Build Alternative 5D-Ashcake would require construction of one additional main line track and centering all three main line tracks on the existing alignment through the town, which would require additional right-of-way. In addition, Build Alternatives 5B, 5B-Ashcake and 5D-Ashcake would require closure of a short portion of Railroad Avenue/Center Street, parallel to the railroad corridor. Build Alternative 5C and 5C-Ashcake would construct a two-track bypass to the west of Ashland within Hanover County. While a new bypass would provide the most capacity to support the DC2RVA service plan objectives, DRPT concludes that, compared with adding a new third main line through Ashland, the bypass alternative would have greater cost and greater impacts to natural and human resources and would result in more residential relocations.

Table 2-4 summarizes the performance of the Ashland area Build Alternatives against the Purpose and Need evaluation criteria and their impact on the human and natural environment.

Supports decreases in energy consumption	**Yes**	Yes	Yes	Yes	Yes	Yes	Yes

Notes: 1) Refer to Chapters 2 and 4 of the Draft EIS for complete list of factors evaluated and the evaluation results for each Build Alternative. 2) Alternative 5A is the Preferred Alternative because no other avoidance alternatives exist that meet the Purpose and Need for the DC2RVA Project. 3) Does not include rolling stock. DRPT developed operating and maintenance costs and estimates of revenue, but neither were differentiators between the Build Alternatives and were therefore not used by DRPT in selecting the Recommended Preferred Alternative.

2.8 ALTERNATIVE AREA 6: RICHMOND I-295 TO CENTRALIA—CFP 9 TO A011

DRPT evaluated two primary route alignment alternatives for the Richmond area, with one passing west of downtown on the CSXT A-Line and another passing through downtown via the CSXT S-Line, to determine which route was best capable of providing the capacity required to support the DC2RVA Purpose and Need. In addition to the routing options, DRPT evaluated four unique station locations with eight different station service alternatives in the Richmond area serving multiple route and station combinations. The eight station service alternatives included five single-station alternatives that would consolidate passenger service to one station, and three two-station alternatives that offer combinations of services and rail line routes using Main Street Station and Staples Mill Road Station:

Figure 2-7: DRPT Recommended Preferred Alternative (Richmond Area)

- Single-Station Build Alternatives:
  - 6A: Staples Mill Road Station Only
  - 6B–A-Line: Boulevard Station Only, A-Line
  - 6B–S-Line: Boulevard Station Only, S-Line
  - 6C: Broad Street Station Only
  - 6D Main Street Station Only
- Two-Station Build Alternatives:
  - 6E: Split Service, Staples Mill Road/Main Street Stations
  - 6F: Full Service, Staples Mill Road/Main Street Stations
  - 6G: Shared Service, Staples Mill Road/Main Street Station

To develop the most viable alternatives, DRPT engaged in discussions with CSXT, the City of Richmond, Henrico County, and Chesterfield County, as well as the Richmond Transportation Planning Organization. In addition, DRPT held three public meetings and a formal public hearing in Richmond.

DRPT recognizes that a major advantage of passenger rail is the capability to provide the traveling public with a connection to Richmond's downtown. Both FRA and Amtrak also recognize the importance of a connection to the urban core. FRA's Corridor Planning Guidance Manual states that "(each) city should have a station located in or near the central business district." DRPT is committed to maximizing the value of intercity passenger rail by connecting the DC2RVA corridor to the governmental, commercial, and residential population in downtown Richmond. However, DRPT also recognizes that Richmond's Staples Mill Road

Station currently has the highest ridership volumes of any passenger rail station in Virginia, in part due to the higher level of train service at the station. DRPT reviewed the cost estimates, level of impacts, and ridership projections, and determined that having both a downtown station and a suburban station would best meet the Purpose and Need. DRPT determined that **Build Alternative 6F: Full Service, Staples Mill Road/Main Street Stations** provides the most optimal solution for providing downtown Richmond rail service at Main Street Station and convenient connections to Richmond's transit system, including multiple bus routes and the new Bus Rapid Transit (BRT) system under construction along Broad Street. By nature of the respective environments of each location, Main Street Station would provide expanded multimodal connectivity, while Staples Mills Road Station could continue to accommodate the parking needs of regional rail passengers who are not located in the downtown Richmond area (see Figure 2-7). The two-station service in Build Alternative 6F also reflects FRA's Guidance Manual for Railroad Corridor Transportation Plans (2005), which states that "each city should have a station located in or near the central business district," but also that "one or more suburban stations need to be provided in the larger metropolitan areas."[1]

In this alternative, all Long-Distance, Interstate Corridor, and Northeast Regional passenger trains moving north-south through Richmond would be routed through Staples Mill Road Station to the west side of Main Street Station and then to Centralia using the S-Line. The Northeast Regional service to Newport News would continue to use the east side of Main Street Station on the Peninsula Subdivision line. This alternative includes improvements between Greendale and Centralia along the S-Line and includes station and service improvements at Main Street Station, an additional bridge crossing of the James River, an east bypass of Acca Yard, and station and service improvements at Staples Mill Road Station. With all intercity passenger trains (with the exception of Amtrak's Auto Train) serving Downtown Richmond via the CSXT S-Line, the CSXT A-Line will become a primarily freight route bypassing downtown and reducing delays for both services. Therefore, DRPT has determined that Build Alternative 6F is the Recommended Preferred Alternative for the Richmond area.

Table 2-5 summarizes the performance of the Richmond Area Build Alternatives against the Purpose and Need evaluation criteria and their impact on the human and natural environment.

Notes: 1) Refer to Chapter 2 and Chapter 4 of the Draft EIS for complete list of factors evaluated and the evaluation results for each Build Alternative. 2) Other avoidance alternatives do not exist that would meet the Purpose and Need for the DC2RVA Project. 3) Does not include rolling stock. 4) Fredericksburg and Ashland operations data assumes use of Richmond Alternative 6F. 5) Richmond operations data assumes construction of the recommended alternatives for each of the sections and additional third main track capacity through Ashland. A Boulevard Station S-Line option (all trains via S-Line and East Acca bypass) was not modeled, but is assumed by DRPT to have similar operating parameters as Alternative 6D Main Street Station. 6) Travel times are for limited stop southbound Interstate Corridor (SEHSR) trains only from Washington Union Station to the station closest to downtown Richmond. Northbound Interstate Corridor trains are about 2 minutes longer. Regional trains, which make more stops, operate 6 to 8 minutes longer. 7) New at-grade crossings would require a variance of Virginia State Code and/or coordination with VDOT.

DRPT developed operating and maintenance costs and estimates of revenue, but neither were differentiators between the Build Alternatives and were therefore not used by DRPT in selecting the Recommended Preferred Alternative.

3 REFINED OPERATIONS ANALYSIS MODELING

3.1 OPERATIONS MODELING OVERVIEW

3.1.1 Background and Federal Requirements of Operations Simulations in Passenger Projects

DRPT conducted computer-based operations simulations (also known as operations modeling) to estimate rail performance in the corridor, in order to estimate if alternatives defined in the Draft EIS might be anticipated to provide the infrastructure capacity and service performance necessary to meet the Purpose and Need of the DC2RVA Project. This work was conducted using Rail Traffic Controller (RTC) simulation software.

Operations modeling is conducted to compare rail performance under different scenarios to simulate existing and future railroad operations. The rail performance results generated from the simulations are estimates, not guarantees, and U.S. railroad companies use the performance estimates that are generated as a tool to determine trends in operational performance between different infrastructure alternatives, rather than focusing on the exact performance estimate generated by the software.

The goals of the operations modeling conducted by DRPT for the DC2RVA Project were to:

- Estimate the operating performance of:
  - Existing and proposed intercity passenger service,
  - Existing and planned VRE commuter rail service, and
  - Existing and forecasted CSXT freight service.
- Estimate the ability of infrastructure proposed for the DC2RVA Corridor to provide the capacity and service performance necessary for intercity passenger trains identified in the Purpose and Need for the Project while not unduly or unreasonably interfering with the performance of freight and commuter rail passenger trains.

DRPT used the intercity passenger and freight train performance goals established under Section 207 of the Passenger Rail Investment and Improvement Act of 2008 (PRIIA) and published in the Federal Register as the Metrics and Standards for Intercity Passenger Rail Service as base guidelines for the performance thresholds in DRPT's operations modeling. Under PRIIA, intercity passenger rail projects must provide for a sufficient level of infrastructure that will:

- Enable the existing and proposed passenger rail service to run on time; i.e., achieve 90 percent or better on-time performance for all NEC Regional and state-supported passenger trains and 85 percent for Long Distance trains operating outside the NEC.

- Accommodate and allow for the future growth of existing and projected intercity, commuter, and freight rail service.
- Not unreasonably delay the freight operations of the host railroad on account of the proposed additional passenger train frequencies.

DRPT applied a threshold of 90 percent on-time performance for all existing and proposed passenger and commuter trains in the DC2RVA corridor. In addition, the DC2RVA Project Purpose and Need specifically includes a goal of being able to reliably accommodate 18 additional intercity passenger trains (nine round-trips), as well as reduce travel time and accommodate freight growth.

3.1.2 Passenger and Freight Train Performance Goals

PRIIA's performance goals for intercity passenger trains are for all passenger trains, except Long Distance trains, to arrive on-time at each station ("all-stations" performance) and at corridor endpoints ("endpoint" performance) at least 90 percent of the time. On-time, as defined by PRIIA, means arrival at a station at the scheduled time or within a set "late tolerance" period following the scheduled time. The length of the late tolerance period varies by the type of intercity passenger service and the total distance between the train's scheduled endpoints. For most intercity passenger trains operating on the DC2RVA corridor, the PRIIA standard is for the train to arrive at its end-point station within 10 minutes of its published schedule. In this analysis, DRPT defined the end-point stations as follows: Washington, D.C. for all northbound trains; Petersburg, VA (Ettrick) for all trains operating south of Richmond, VA; and Richmond Main Street Station for all trains terminating in Richmond or extending east to Newport News.

PRIIA's performance goal for freight service is for intercity passenger rail service to not unduly or unreasonably delay the movement of freight. The performance of freight trains is compared for different alternatives by estimating future freight train delay under the 2045 Build Alternatives with the 2045 No-Build Alternative. Freight train delay is measured as minutes of delay per train, per 100 train-miles. This metric compares the simulated time a freight train took to cover its route inclusive of interactions with other trains, passenger and freight, compared to the time the freight train would have taken to cover its route had it encountered no delays en-route.

3.2 OPERATIONS MODELING CONDUCTED FOR DC2RVA

3.2.1 Purpose and Phases of Operations Modeling Conducted for DC2RVA Project

The purpose of the operations analysis undertaken by DRPT for the DC2RVA Project was to use computer-based operations simulations to estimate the operational performance of intercity passenger, freight, and commuter trains under four different "build case" operations simulations that were identified by DRPT, as well as a "No Build case" to which the four build case simulations were compared.

Preliminary Operations Modeling to Compare Local Alternatives. During the preparation of the Draft EIS, DRPT conducted several preliminary operations simulations that evaluated multiple infrastructure alternatives in the Ashland area, including alternatives with two tracks and three tracks. DRPT evaluated these preliminary operations simulations against the Project's need to accommodate an additional 18 intercity passenger trains per day (nine round-trips), accommodate projected CSXT freight growth, and meet PRIIA's passenger and freight train on-time performance targets through 2045. The train performance estimates derived by DRPT from this preliminary work suggested that either a third main track through Ashland or a two-track bypass around Ashland would provide the highest likelihood that trains throughout the Project corridor would meet their performance goals under the service level and schedule projected. FRA staff also expressed concern regarding the incorporation of a modeling assumption that enabled commuter and passenger trains to use any available mainline track and station platform when operating within the corridor, rather than applying an operating protocol that directed passenger and commuter trains to use specific tracks and station platforms in a consistent operating pattern when traveling within the corridor. DRPT therefore determined that other rail infrastructure and service scenarios should be considered, perhaps in concert with schedule modifications, which could also achieve the Project's Purpose and Need goals.

Service Assumptions. The following service assumptions for intercity passenger, commuter, and freight trains were used for scenarios modeled as part of the Phase 1 "Refined Operations Analysis" and Phase 2 "Network-Wide Analysis) simulations conducted for the DC2RVA Project in 2017.

- Future Amtrak intercity passenger services were modeled based on the following assumptions of increased service frequencies:
    - Eighteen additional intercity passenger trains per day (nine new round trips) between Washington, D.C. and Richmond, which is the service increase proposed by the DC2RVA Project.
    - Two additional intercity passenger trains between Washington, D.C. and Lynchburg. South of Washington, D.C. these trains exit the DC2RVA Corridor south of Alexandria station. These trains are included in the No-Build Alternative as they are fully-funded and presumed to be introduced regardless of whether or not the DC2RVA Project is implemented.
    - An increase in Cardinal long-distance service between Washington, D.C. and Chicago from three times per week in each direction to once per day in each direction. South of Washington, D.C., these trains exit the DC2RVA Corridor at Alexandria. This service is included in the No-Build Alternative as the increase is presumed to occur regardless of whether or not the DC2RVA Project is implemented.
    - No additional changes in intercity passenger trains would occur between the DC2RVA Project's proposed implementation year of 2025 and the horizon year of 2045.
- All intercity passenger trains in Richmond (Alternative Area 6) used the "Full Service, Staples Mill Road/Main Street Stations" infrastructure and service alternative.
- All existing and new Virginia-supported Northeast Regional passenger trains made a station stop at each Amtrak station in the corridor, including Ashland, and excluding the Lorton Auto Train station.
- Future VRE commuter train services were modeled based on the following assumptions:
    - VRE commuter train frequencies were assumed to increase from 34 weekday trains in 2015 to a projected 38 weekday trains for the years 2025 through 2045. These trains

  are included in the No-Build Alternative as they are fully-funded and presumed to be introduced regardless of whether or not the DC2RVA Project is implemented.

- Future increases in CSXT freight train services were modeled based on the following assumptions of forecasted freight growth:
  - To forecast freight train growth from existing (2015) levels, DRPT solicited input from CSXT about future increases in freight traffic in the corridor for the future years 2025 and 2045. DRPT used the U.S. Department of Transportation's Freight Analysis Framework to forecast how rail freight traffic in the corridor would increase and change in 2025 and 2045.
  - CSXT freight growth is independent of the DC2RVA Project and is presumed to occur by itself regardless of whether or not the DC2RVA Project is implemented. These trains are included in the No-Build Alternative as they reflect the DRPT forecast estimates and presumed to be introduced regardless of whether or not the DC2RVA Project is implemented.

    CSXT actual freight growth will be driven by market forces and may be greater or less than the projected growth rates.

Phase 1: "Refined Operations Analysis." The purpose of the refined operations analysis was to improve the performance results of all trains operating on the corridor by applying modifications to the proposed infrastructure and operating plan based on assessments of the preliminary operations modeling assumptions and results. The Refined Operations Analysis simulations had the following objectives and characteristics:

- Measurement of passenger and freight train performance focused on performance within the DC2RVA Corridor, rather than the entire DC2RVA Modeling Limits, which included contiguous sections of shared-use track north and south of the corridor.
- Review and revise the configuration of the proposed infrastructure to improve operational consistency and performance along the corridor:
  - Changes to the Project's proposed track infrastructure, in particular reconfigured crossovers, sidings, and station platforms.
- Review and revise the operating characteristics and assumptions applied to the model to reduce delays associated with schedule conflicts:
  - Incorporation of a platform assignment plan for intercity passenger and commuter trains operating within the corridor.
  - Revise intercity passenger train schedules between Washington and Richmond, where feasible, to capture changes in passenger train running times and recovery times made to enable trains to achieve PRIIA-mandated on-time performance goals in normal real-world operation under the revised corridor infrastructure and platform assignment plan described above.

Phase 2: "Network-Wide Analysis." The work in this phase consisted of running operations simulations to estimate potential effects to passenger, freight, and commuter train performance within a larger territory of shared-use track in the Northeastern United States, to estimate the potential effects of the Project on rail operations in territory adjacent to the DC2RVA corridor. The Network-Wide Analysis simulations had the following characteristics:

- The revised infrastructure, operating, and train schedule modifications made for the Phase 1 modeling were applied in the Phase 2 modeling.
- Passenger and freight train performance were measured across a larger portion of the shared-use rail network, which included contiguous sections of track in the Northeastern United States programmed into the simulation software that constituted the DC2RVA Modeling Limits.
  - Performance was measured on a shared-use network of track stretching from Philadelphia, PA, and Cumberland, MD, to Newport News, VA, and Rocky Mount, NC.
- Additional freight train performance outputs were generated.

3.2.2 Modeling Scenarios for Phases 1 and 2

The modeling scenarios simulated by DRPT were identical for Phases 1 and 2 and consisted of the following four build cases and one No Build case. In all cases described below, the infrastructure alternatives were tested for proposed operations in the year 2045, which represents the concluding year of a 20-year horizon for the Project, based on the Project's proposed implementation year of 2025.

1. **DC2RVA 2045 No Build:** This case measured performance on the DC2RVA corridor with the No Build infrastructure and no-build train operations (without adding 18 new intercity passenger trains) identified in the DC2RVA Draft EIS.
2. **DC2RVA 2045 Build:** This Build case measured performance on the DC2RVA corridor with infrastructure that reflects the Commonwealth's Recommended Preferred Alternative for the full length of the DC2RVA corridor with three main tracks from Alexandria to Richmond Staples Mill Road, with a test of the three-track alternatives in Area 5 (Alternatives 5B, 5B-Ashcake, and 5D-Ashcake) through Ashland. This case included 18 new intercity passenger trains (nine round-trip) in addition to the no-build train operations.
3. **DC2RVA 2045 Build, 2 tracks Ashland:** This Build case measured performance on the DC2RVA corridor with infrastructure that reflects the Commonwealth's Recommended Preferred Alternative for the full length of the DC2RVA corridor with three main tracks from Alexandria to Richmond Staples Mill Road, with a test of the two-track alternative in Area 5 (Alternative 5A, also known as "3-2-3"). This case includes a reduction to two main tracks for two miles through the Town of Ashland. This case included 18 new intercity passenger trains (nine round-trip) in addition to the no-build train operations.
4. **DC2RVA 2045 Build, 2 tracks Ashland + Track Out of Service North (MOW Outage):** This Build case measured performance on the DC2RVA corridor with infrastructure that reflects the Commonwealth's Recommended Preferred Alternative for the full length of the DC2RVA corridor with three main tracks from Alexandria to Richmond Staples Mill Road, with a test of the two-track alternative in Area 5 (Alternative 5A, also known as "3-2-3"). This case included a reduction to two main tracks for two miles through the Town of Ashland as well as an additional segment of track taken out of service for maintenance north of Crossroads. This case included a randomly selected segment of approximately 10 miles in length between Alexandria and Crossroads that would be

taken out of service in order to test the response of the network to a daytime maintenance-of-way (*i.e.*, rail upkeep and repair) outage. In this case, the 10-mile section would have two main tracks during the maintenance-of-way outage and three main tracks at other times. This case included 18 new intercity passenger trains (nine round-trip) in addition to the no-build train operations.

5. **DC2RVA 2045 Build, 2 tracks south of Crossroads:** This Build case measured performance on the DC2RVA corridor with infrastructure that reflects a modification to the Commonwealth's Recommended Preferred Alternative with three main tracks from Alexandria to Crossroads, and reduced to two main tracks from Crossroads to Richmond Staples Mill Road. This case included 18 new intercity passenger trains (nine round-trip) in addition to the no-build train operations.

3.2.3 Results of Phase 1 and Phase 2 Modeling

Table 3-1 summarizes the modeling results from the "Phase 1 Refined Operations Analysis" simulations undertaken by DRPT. In the Build Case of Alternative 5A, with three main tracks from Alexandria to Richmond Staples Mill Road and with a constrained two-track alignment in Area 5 through Ashland (the middle column of the five-case result columns), the model estimated that Regional and Interstate Corridor passenger trains in this case cumulatively met the PRIIA passenger train endpoint on-time performance target of 90 percent and the passenger train all-stations on-time performance target of 90 percent, and cumulative freight train performance, measured in delay minutes per 100 train-miles, had a decrease of 2.4 minutes from the No Build case performance estimate.

Table 3-1: Summary of Phase 1 Refined Operations Analysis Modeling Results (Averaged Results from 5 Randomized Cases)

Case	DC2RVA 2045 No Build	DC2RVA 2045 Build	DC2RVA 2045 Build 2 Tracks in Ashland	DC2RVA 2045 Build 2 Tracks in Ashland + Track out-of-Service	DC2RVA 2045 Build with 2 Tracks South of Crossroads

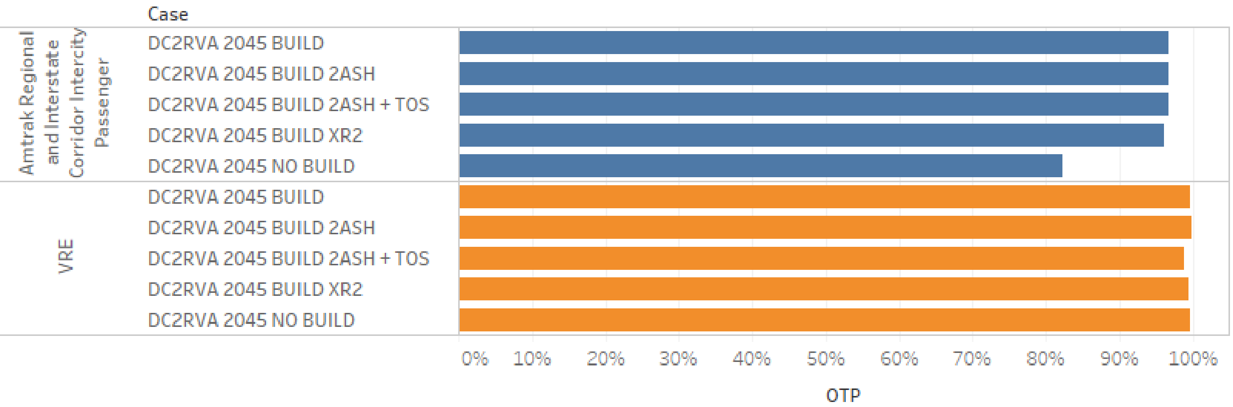
3.2.4 Phase 1 and Phase 2 Modeling Summary

The operations analysis performed as part of the EIS for the DC2RVA Project provided the basis to estimate the infrastructure required to deliver the operational improvements defined in the Purpose and Need for the DC2RVA Project. DRPT performed the operations analysis using RTC software with sample data from actual CSXT freight operations from 2014. The analysis included DRPT-forecasted freight growth through 2045 and a proposed future intercity passenger rail and VRE commuter operating schedule for 2025 and 2045 (prepared in 2015 and revised through 2017). The results of this analysis represent estimates of future operations and are not intended to predict actual performance, operating conditions, or train schedules. DRPT, CSXT, and the project stakeholders will continue to review and update the operations analysis for the DC2RVA corridor through the life of the Project to help assess whether the infrastructure proposed in the EIS meets the Purpose and Need for the DC2RVA Project.

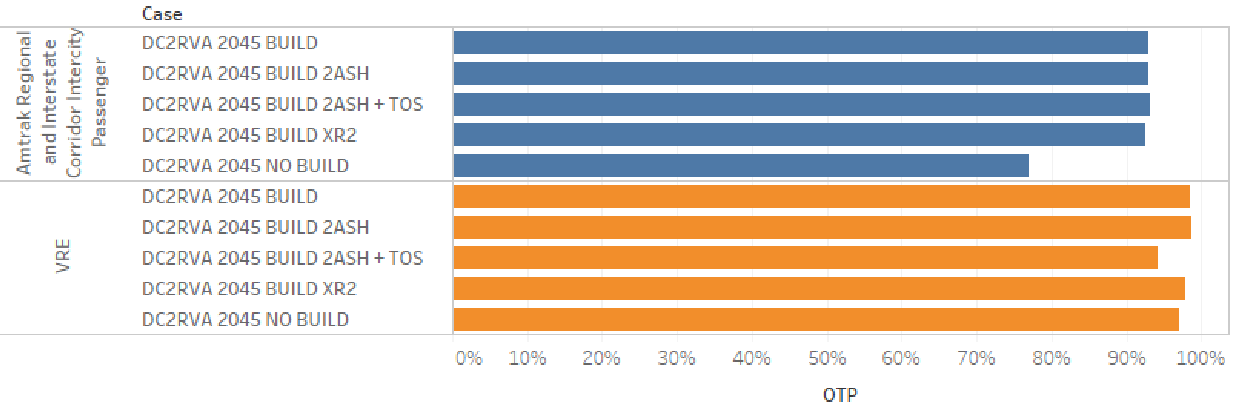
The purpose of the No-Build alternative is to estimate the future condition of the railroad operating environment due to forecasted freight growth and planned, programmed, or funded passenger and commuter rail increases without the construction of the improvements or implementation of the intercity passenger rail service (nine new round-trip trains) proposed in the DC2RVA Project. Note: the No-Build analysis did not include consideration of maintenance-of-way outages, which could be anticipated to increase estimated freight, passenger, and commuter train delays above the 2045 No-Build Alternatives results shown in Section 3.2.3. [A comparison of modeling results between the 2045 Build, 2 Tracks Ashland case with the 2045 Build, 2 Tracks Ashland + Track Out of Service North (MOW Outage) provides an example of how passenger and freight train performance can be affected by maintenance outages.]

Figure 3-1 provides an illustrative summary of the modeling results from the “Phase 1 Refined Operations Analysis” simulations undertaken by DRPT. The figure shows the on-time performance for passenger trains and VRE commuter trains estimated in the 2045 No-Build case as well as all four 2045 Build cases, and also shows the freight train delay per 100 train-miles estimated in the 2045 No-Build case as well as all four 2045 Build cases. The figure shows that, in the modeling case testing the Commonwealth’s Recommended Preferred Alternative for the full length of the DC2RVA corridor with three main tracks from Alexandria to Richmond Staples Mill Road and with a constrained two-track alignment in Area 5 through Ashland (Alternative 5A, also known as “3-2-3”), both intercity passenger trains and VRE commuter trains exceeded their performance goal of 90 percent on-time performance and freight train performance, measured in delay minutes per 100 train-miles, improved from the No-Build performance results. The modeling case depicting Alternative 5A is identified in Figure 3-1 as “DC2RVA 2045 BUILD 2ASH.”

Passenger Train All Stations On-Time Performance, Petersburg to Washington Union Station



Passenger Train End-Point On-Time Performance, Petersburg to Washington Union Station



Freight Train Minutes of Delay per 100 Train-Miles

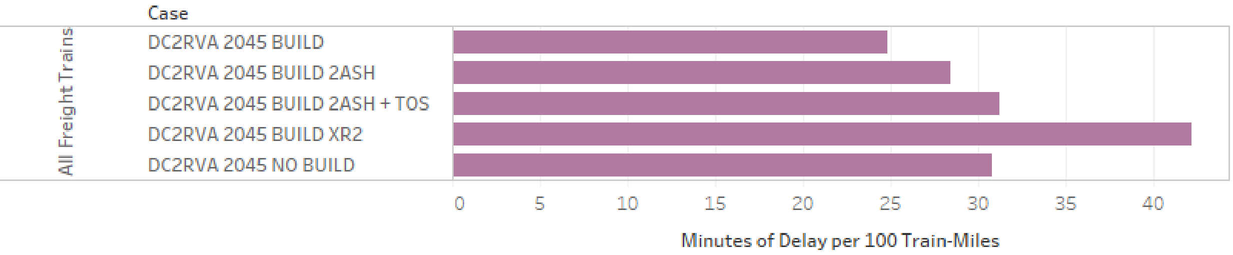


Figure 3-1: Passenger and Freight Train Performance Modeling Results From Phase 1 Refined Operations Analysis Simulations (Averaged Results from 5 Randomized Cases)

Figure 3-2 provides an illustrative summary of the modeling results from the "Phase 2 Network-Wide Analysis" operations simulations undertaken by DRPT. The figure shows the on-time performance for passenger trains and VRE commuter trains estimated in the 2045 No-Build case as well as all four 2045 Build cases, and also shows the freight train delay per 100 train-miles estimated in the 2045 No-Build case as well as all four 2045 Build cases. The figure shows that, in the modeling case testing the Commonwealth's Recommended Preferred Alternative for the full length of the DC2RVA corridor with three main tracks from Alexandria to Richmond Staples Mill Road and with a constrained two-track alignment in Area 5 through Ashland (Alternative 5A, also known as "3-2-3"), both passenger trains and VRE commuter trains exceeded their performance goal of 90 percent on-time performance. Freight train performance, measured in delay minutes per 100 train-miles, did not improve from the No-Build performance results. The modeling case depicting Alternative 5A is identified in Figure 3-2 as "DC2RVA 2045 BUILD 2ASH."

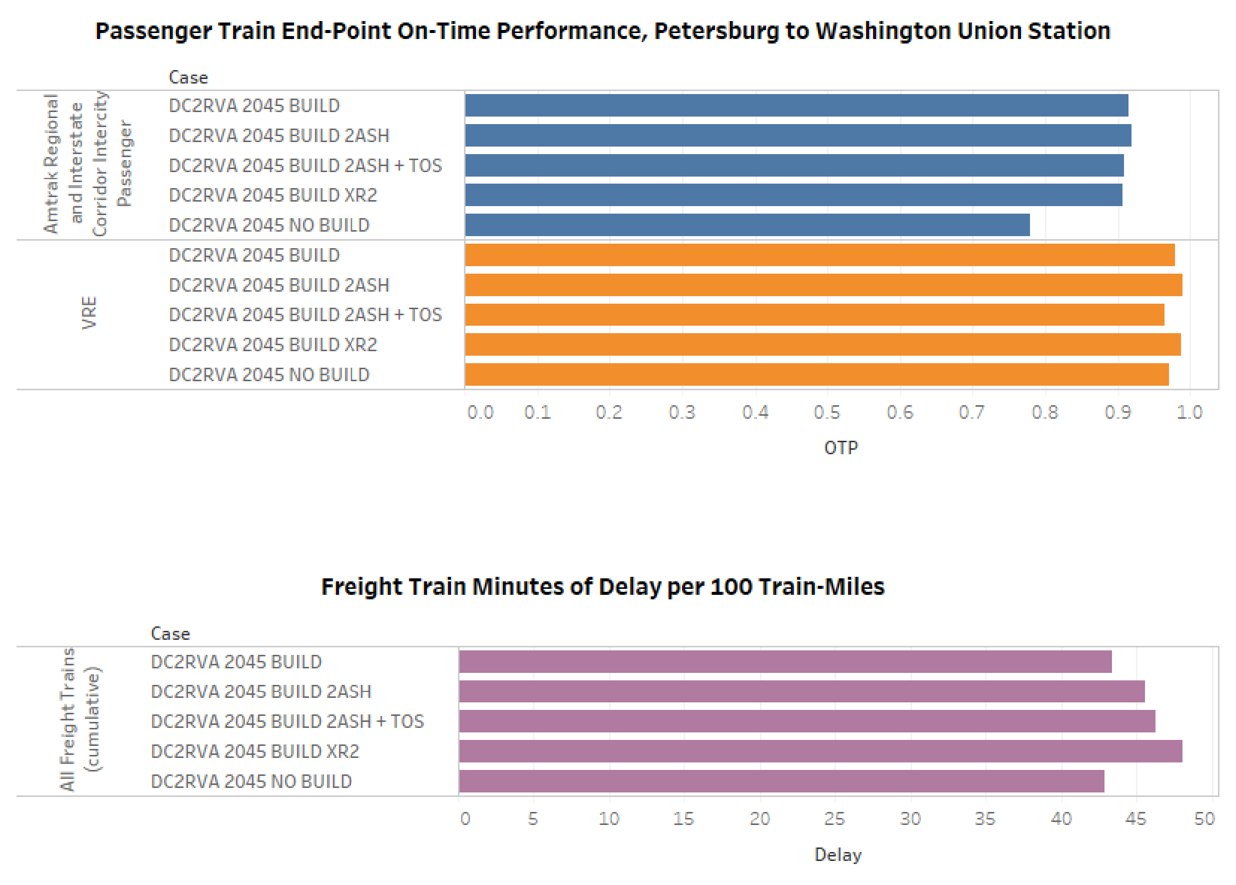

Figure 3-2: Passenger and Freight Train Performance Modeling Results From Phase 2 Network-Wide Analysis Simulations (Averaged Results from 5 Randomized Cases)

As presented in the tables in Section 3.2.3 and Figures 3-1 and 3-2, all four of the DC2RVA 2045 Build cases delivered improved on-time performance for intercity passenger and VRE commuter trains compared to the 2045 No-Build case. In both the Phase 1 Refined Operations Analysis, which was constrained to the DC2RVA Corridor, and the Phase 2 Network-Wide Analysis, the on-time performance for intercity passenger and VRE commuter services exceeded the 90 percent goal. Generally, the higher performing cases corresponded to those with the most additional infrastructure (tracks); however, both the Phase 1 and Phase 2 analyses estimated that the two track cases provided sufficient capacity to deliver the intercity passenger and VRE performance goals for the DC2RVA Project. (Prior to the Refined Operations Analysis modeling work, preliminary operations modeling was conducted that also included a case estimating existing passenger train performance, based on 2014 data, where intercity passenger on-time performance averaged between 70 and 80 percent and VRE commuter service performed near 95 percent in 2014. Although results from that preliminary operations modeling are not directly comparable, since infrastructure and passenger train operating characteristics and assumptions were modified for the Refined Operations Analysis modeling, the results from the Phase 1 Refined Operations Analysis and Phase 2 Network-Wide Analysis estimated that the DC2RVA 2045 Build Alternatives would achieve improved intercity passenger on-time performance from the existing levels, based on 2014 data.)

For the freight operations, the cases with the most additional infrastructure also produced the most favorable results. The baseline to compare the effect on freight delays in the 2045 No-Build alternative estimated approximately 30 minutes of delay (per 100 train-miles) within the DC2RVA Corridor and 40 minutes of delay network-wide. For the Phase 1 Refined Operations Analysis, which was constrained to the DC2RVA Corridor, the DC2RVA 2045 Build case with three tracks south of Alexandria estimated an improvement of 6.0 minutes of freight train delay compared to the DC2RVA 2045 No-Build alternative, and the DC2RVA 2045 Build case with two tracks through Ashland estimated an improvement of 2.4 minutes of freight train delay compared to the DC2RVA 2045 No-Build alternative. When continuing the analysis to take one track out of service north of Crossroads for maintenance-of-way, the freight delays begin to exceed that of the 2045 No-Build alternative. For the Phase-2 Network-Wide Analysis, which estimated train performance across the entire modeled territory, the freight performance in the DC2RVA 2045 Build cases with either three or two tracks fell below that of the DC2RVA 2045 No-Build case, estimating the potential need for additional capacity either within or outside of the DC2RVA Corridor to accommodate the intercity passenger rail service proposed by the DC2RVA Project as well as forecasted CSXT traffic levels for 2045. CSXT has reviewed the results of the Phase 1 Refined Operations Analysis for the DC2RVA Corridor and Phase 2 Network-Wide Analysis and has expressed concern that the DC2RVA Project with a constrained two-track alignment through Ashland (Alternative 5A and 5A-Ashcake) will negatively impact the freight network performance in 2045. DRPT and FRA have reviewed the modeling results with consideration for CSXT's concern and have determined that the potential impacts imposed by constraining the corridor to two tracks through Ashland at forecasted 2045 traffic levels are negligible and can be mitigated through continued analysis of the intercity passenger, VRE commuter, and freight operating plan or potential capital improvements on the CSXT freight network either within or outside the limits of the DC2RVA Project.

Table 3-3 compares the modeling results from the Phase 1 and Phase 2 operations simulations with the passenger and freight train performance goals established for the Project. The modeling case depicting Alternative 5A with a constrained two-track alignment through

Ashland (also known as "3-2-3") is identified in Table 3-3 as "DC2RVA 2045 BUILD 2ASH". The table shows that, in the modeling case testing the Commonwealth's Recommended Preferred Alternative for the full length of the DC2RVA corridor with three main tracks from Alexandria to Richmond Staples Mill Road with a test of the two-track alternative in Area 5 (Alternative 5A), both passenger trains and VRE commuter trains exceeded their performance goal of 90 percent on-time performance, and freight train delay was reduced from the No-Build results in the Phase 1 modeling but was not reduced from the No-Build results in the Phase 2 modeling.

Table 3-3: Phase 1 and 2 Modeling Results Compared with Performance Goals

Case	DC2RVA 2045 NO BUILD	DC2RVA 2045 BUILD	DC2RVA 2045 BUILD 2ASH	DC2RVA 2045 BUILD 2ASH + TOS	DC2RVA 2045 BUILD XR2
Passenger Train On-Time Performance of 90% or Higher Achieved	NO	YES	YES	YES	YEs
VRE Commuter On-Time Performance of 90% or Higher Achieved	YES	YES	YES	YES	YES
Freight Train Delay Reduced from No-Build		YES (Phase I) NO (Phase 2)	YES (Phase I) NO (Phase 2)	NO	NO

DRPT intends to prepare a Service Development Plan (SDP) to incrementally implement the service improvements planned in the DC2RVA Project. As part of this SDP effort, DRPT will prepare additional operations analysis to help define the infrastructure required to deliver phased intercity passenger rail service growth through the 2045 Build Alternative. These operations analyses will be based on the 2014 data provided by CSXT and the project stakeholders and will continue to estimate the same infrastructure and operating characteristics presented in the EIS for the DC2RVA Project. DRPT and FRA recognize that future operations analysis may suggest modifications to the infrastructure or the proposed operating plan beyond that presented in the EIS. Should potential modifications include a significant increase in environmental impacts or a reduction in the benefits presented in the EIS, a supplemental NEPA analysis may be required, as applicable under current or future NEPA regulations.

Separate from the Purpose and Need of the DC2RVA Project, DRPT and FRA also recognize that CSXT, VRE, or other project stakeholders may pursue additional capital improvements along the DC2RVA Corridor between Centralia and Washington, D.C., or on the adjacent railroad network. Additional operations analysis performed as part of the SDP, or in subsequent iterations through the life of the DC2RVA Project, will need to include the modifications to the railroad network constructed by others to continue to estimate that the infrastructure defined in the EIS for the DC2RVA Project remains effective to meet the Purpose and Need of the Project.

4 PUBLIC INVOLVEMENT

4.1 PUBLIC INVOLVEMENT AND OUTREACH

The DC2RVA Project has followed an extensive public participation process that began in 2014 with FRA's publication of a Notice of Intent in the Federal Register and continues today. The outreach plan was developed to comply with the requirements, as well as to solicit public input and promote informed decision-making by federal, state, and local agencies.

The overall goal of the public involvement program is to provide an open, dynamic process that includes as many residents, businesses, agencies, stakeholders, and community groups within the project area as possible. DRPT has used a variety of outreach tools including public meetings, online meetings, mailings and emails, newspaper and social media postings, workshops and informational sessions, and an interactive project website to document all Project-related materials. DRPT is committed to involving stakeholders and the public early and often and sharing information as it becomes available.

4.1.1 Notice of Availability (NOA)

On October 6, 2014, 30 days in advance of the first Scoping public meeting, DRPT initiated the Project's public outreach to alert the public, agencies, and media of the Project's inception. The Project launch included formal publication by FRA of a Notice of Intent (NOI) for the Project in the Federal Register on October 23, 2014.

On September 8, 2017, the DC2RVA Tier II Draft EIS Notice of Availability (NOA) was published in the Federal Register[2] in accordance with NEPA, and a 60-day comment period extending through November 7, 2017, was opened. Also on September 8, 2017, the FRA posted information about the Draft EIS on their website[3] including links to the full Draft EIS and Appendices, which were posted on the DC2RVA website maintained by DRPT. A printed copy of the Draft EIS Executive Summary accompanied by a digital copy of the entire Draft EIS was made available in nearly 80 locations along the corridor, including libraries and State offices.

DRPT developed and implemented an extensive outreach campaign to ensure stakeholders and the interested public were aware of the opportunity to offer public comments on the project, alternatives evaluated in the Draft EIS, and DRPT's recommended preferred alternative during the Draft EIS comment period.

---

[2] https://www.federalregister.gov/documents/2017/09/08/2017-19059/environmental-impact-statements-notice-of-availability

[3] https://www.fra.dot.gov/Page/P0729

4.1.2 Project Website

DRPT maintains and updates the Project website to include the most current information about the DC2RVA Project. In preparation for the public comment period, the Draft EIS, including all appendices were posted to the website in advance of the NOA. DRPT also updated the Project website with the following:

- Hearing location details
- How to request special accommodations to attend the hearing
- A list of locations where hard copies of the Draft EIS were available
- Instructions on how to provide comments
- An interactive map showing the DRPT Recommended Preferred Alternative conceptual build components overlaid with parcel information
- Project flyers and press releases

The electronic comment form was maintained on the "Contact Us" page of the Project website.

4.1.3 Postcard Mailing

Property owners within a 500-foot distance from the centerline of the Project study area received a postcard notice of the Draft EIS and an invitation to the public hearings. DRPT mailed a total of 9,057 postcards.

Additional postcards were packaged in bundles of 100 and distributed to the following for further distribution:

- Lincoln Housing (USMC Base Quantico)
- Town of Ashland
- Fredericksburg Area Metropolitan Planning Organization (FAMPO)
- Crater Planning District Commission
- Richmond Regional Planning District Commission

4.1.4 Email

The Project team sent several emails to the Project distribution list, as well as to elected officials and to Title VI advocacy groups, to notify them of the Draft EIS comment period and in-person and online meetings.

The email distribution lists included the following groups:

- Individuals who requested to be included on the Project mailing list
- State, Regional, and Local Agencies
- State, Regional, and Local Elected Officials

- Public involvement offices
- Transit/transportation organizations and advocacy groups
- Business/institutional communities
- Community organizations & special interest groups
- Title VI Organizations (*i.e.*, Seniors, Low Income, Persons with Disabilities, Ethnic, Minorities, Religious)
- Environmental Justice populations and Low English Proficiency (translated to Spanish)

4.1.5 Social Media

The DC2RVA Facebook and Twitter accounts announced the upcoming comment period and hearings and directed viewers to the Project website for more information.

Social Media Profiles:

- Twitter: @dc2rvarail
- Facebook: dc2rvarail

4.1.6 Static Displays, Fliers, and Rack Cards

Large display boards, fliers, and rack cards were developed, printed, and posted throughout the Project corridor, particularly in areas identified as having greater environmental justice and limited English proficiency populations. The display boards provided information about the Project and details about the public hearings. In addition, Virginia Railway Express (VRE) placed posters in their stations.

Flyers produced in English and Spanish were hand-delivered and mailed to 44 locations along the Project corridor and in the areas surrounding potential rail stations. PDF versions of the flyers were provided to Public Information Officers via email and also were made available for download on the Project website.

4.1.7 Media Relations

To facilitate media, coverage, DRPT sent English and Spanish press releases and media advisories to members of the press. On September 8, 2017, DRPT distributed a press release notifying interested parties of the opening of the Draft EIS comment period, and a press release was distributed on September 25, 2017, providing information on the public hearing locations.

In addition to press releases, DRPT distributed Media Advisories to the media during the weeks of the hearings to remind them of the hearing dates and to encourage their attendance at the hearings. Advertisements with information on the public hearings and the Draft EIS comment period were also published in eleven local papers along the Project corridor.

Key media outlets were called and/or emailed to follow up on their receipt of the releases and to offer interviews. As a result, approximately 25 mentions/news stories appeared between September 8 and November 7, 2017. VRE included an article on the Project in their October 2017 issue of RIDE Magazine, and Richmond Magazine published an article on October 11, 2017.

4.1.8 Public Information Officer/Communication Manager Outreach Coordination

To broaden the reach and diversity of the public outreach efforts, DRPT communicated with 377 public information officers and community outreach managers for key agencies and organizations in the Project area (*i.e.*, planning districts, transportation organizations, Title VI organizations, City Council and Board of Supervisor liaisons and clerks) and asked for their assistance in the notification effort. They were encouraged to send emails to their groups, post information on their websites, post information on community bulletin boards, and more. DRPT sent these groups an initial email message that offered them various outreach tools (*i.e.*, flyer, news release, and community calendar graphic) to distribute to citizens and stakeholders. Follow up phone calls and emails were made in advance of the public hearings.

4.1.9 Environmental Justice and Other Special Targeted Outreach

DRPT conducted special targeted outreach to ensure that diverse segments of the population were given the opportunity to become involved with the Project at an early stage. Targeted outreach included identifying contacts representing low income, minority, seniors, disabled, human service groups and organizations that advocate and/or provide services on their behalf. All groups and individuals identified through this process were provided information regarding the Project and the public meetings and were asked for detailed contact information so that they could be included in future communications. Social Services, Disabilities Boards, the Area Agency on Aging, Hispanic business and advocacy groups, and the NAACP were included in addition to community centers, universities, neighborhood associations, and businesses.

4.1.10 Title VI and Limited English Proficiency

The Project team ensured that all federal Title VI requirements were met in the distribution and notification of project materials to populations along the study corridor with limited proficiency in English.

- Spanish statements were included on outreach materials describing how to request assistance/translation for meetings.
- By advance request (48 hours), foreign language translators and American Sign Language (ASL) interpreters were provided at in-person meetings. For the public hearings, there were two requests for ASL and no requests for Spanish translation.
- Flyers and static displays were distributed to libraries in areas with higher populations of Title VI communities and Limited English communities.
- Public hearing locations were ADA accessible.
- TDD and TYY numbers were included in outreach materials.
- Ads translated to Spanish for Spanish newspapers were placed in the following:
  - *Las Nuevas Raices*
  - *El Tiempo Latino*
- Press releases were translated to Spanish for Spanish media outlets.

- 98 Title VI groups were included on the Project distribution list to receive email updates and information.
- Emails were translated to Spanish for more than 20 Hispanic organizations and advocacy groups and sent on the same dates as the English versions. Hispanic community leaders were asked to forward and share the information.
- Rack card sized brochures were distributed with English content on one side and Spanish content on the other.
- The team connected with past meeting participants who had required special assistance to attend and again provided the assistance for the hearings.
- The statewide chapter of the NAACP was contacted and sent information to forward.
- A website translation tool and font enlargement tool were provided.

4.2 DRAFT EIS PUBLIC HEARINGS AND PUBLIC COMMENT PERIOD

FRA and DRPT held five formal public hearings between Washington, D.C., and Richmond to solicit public comments on the Draft EIS. The dates, locations, and attendance at each public hearing are included in Table 4-1.

Table 4-1: Public Hearings

Richmond	Ashland	Alexandria	Fredericksburg	Quantico
Tuesday, October 10, 2017 6-9 p.m.	Wednesday, October 11, 2017 6-9 p.m.	Tuesday, October 17, 2017 7-10 p.m.	Wednesday, October 18, 2017 7-10 p.m.	Thursday, October 19, 2017 7-10 p.m.
Main Street Station 1500 East Main St., Richmond	**Patrick Henry High School** 12449 W. Patrick Henry, Ashland	**Hilton Alexandria Old Town** 1767 King St., Alexandria	**James Monroe High School** 2300 Washington Ave., Fredericksburg	**National Museum of the Marine Corps** 18900 Jefferson Davis Hwy., Triangle
94 attendees	169 attendees	77 attendees	43 attendees	27 attendees

An open house was held from 6 p.m. to 9 p.m. in Richmond and Ashland, and 7 p.m. to 10 p.m. in Alexandria, Fredericksburg, and Quantico. The open house included 19 informational boards as well as detailed maps and mapbooks. Project team members were available during the open house to answer questions. The open house remained open during the public hearing portion of the meetings. The public hearings were held in a separate space and began at 6:30 p.m. in Richmond and Ashland, and 7:30 p.m. in Alexandria, Fredericksburg, and Quantico. Attendees of the open house and public hearings were invited to submit a written comment during the meeting, by mail, or online to be included in the record. Attendees were also invited to provide verbal comments of up to three minutes per person during the public hearings; all such verbal comments were recorded by a stenographer. A self-guided online meeting was also made available on the Project website. In total, 410 attendees signed in at the public hearings, and 118 users participated in the online meeting, with an average duration of 4:08 minutes on the site per session.

Comment submissions were accepted during the comment period, which opened on September 8, 2017, and closed on November 7, 2017, by the following methods:

- Complete the electronic form: www.DC2RVArail.com/contact-us
- Provide verbal or written comments at the public hearing
- Provide comments to the court reporter at the public hearing or leave comments on the toll-free project hotline: 888-832-0900 or TDD 711
- Mail written comments to Emily Stock, DRPT, 600 East Main Street, Suite 2102, Richmond, VA 23219

A total of 76 comments were provided verbally during the public hearings, and 37 written comments were placed in the comment box at the meetings. A summary of all comments received during the DC2RVA Draft EIS comment period will be available in the DC2RVA Final EIS.

4.3 OVERVIEW OF DRAFT EIS COMMENTS

During the 60-day Draft EIS public comment period, 4,234 comments were submitted to DRPT. For this comment period, a comment was defined as a single verbal or written communication (such as email or web-based comment form). One comment may have included multiple specific issues. DRPT read and reviewed all of the comments submitted, and DRPT individually identified and coded the specific issues in each comment. Comments frequently contained multiple issues. At the conclusion of the public comment period, 14,098 separate primary issues were identified and coded from the 4,234 comments submitted. In addition, there were 8,903 secondary issues coded. A secondary issue is a more specific topic or preference within a primary issue. For example, a commenter might have called out Ashland alignments as a primary issue and a preference for a western bypass as a secondary issue.

Comments were received through each of the channels provided by DRPT as discussed in Section 4.2. Email was the preferred method for submission, with over 2,500 emailed comments received. During the series of Draft EIS Public Hearings in October, 70 comments were provided verbally and transcribed by a stenographer for the record. Other methods are listed in Table 4-2.

Table 4-2: Comments Received

Total	**4,234**

▶ *Continued*

Petitions that were sent in as form letters were captured as separate comments for the purposes of the count in Table 4-2. For example, the Virginians for High Speed Rail form letters received in support of increased passenger rail service at Main Street Station were counted as separate comments and included in the “Alignments-Richmond” category. Each petition sent in as one letter with an attached table of signatures was captured as one comment. Form letters were coded with the same issues for each letter sent because the body text was identical across all letters.

4.3.1 Comment Trends

DRPT analyzed comment trends by grouping and comparing the frequency of primary and secondary issues. DRPT identified 14,098 primary issue topics as it coded the contents of all comments received during the Draft EIS public comment period. Primary issue topics are shown in Figure 4-1 and Table 4-3 below.

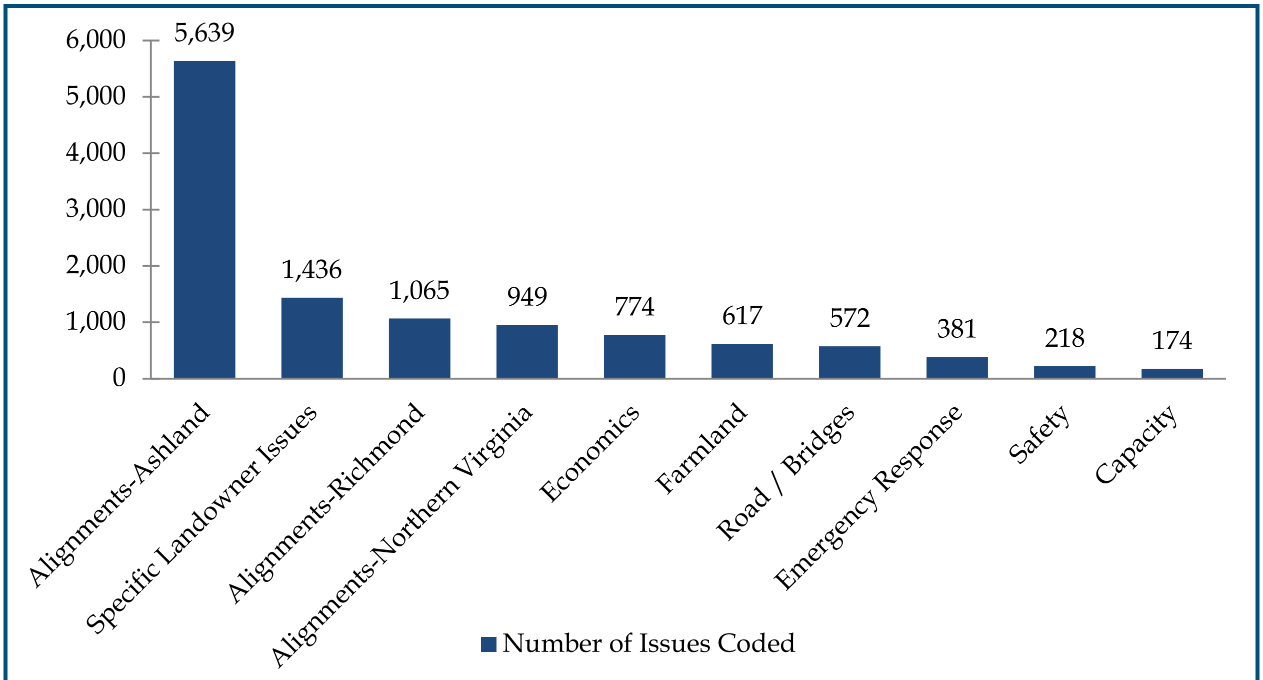

Figure 4-1: Top Primary Issues Coded

Table 4-3: Other Primary Issues Coded

Bicycle and Pedestrian	Technology	Community Facilities and Services	Historic and Cultural Resources
Stations	General Opposition*	Noise and Vibration	Construction
Water Resources	General Support*	Mitigation	Information Request
Parks and Recreation	Fredericksburg Alignments	Biological Resources	Parking
Mailing List Request	Visual/Viewshed	Alternatives	Right-of-Way (ROW)
EIS Process	Agency Coordination	Public Involvement	Compatibility Projects/Plans
Other	Hazardous Materials Transport	Purpose and Need	EJ/Social/Title VI
Land Use	ADA Accommodations	Section 4(f)	Health Impacts
Mobility	Project Schedule	Cumulative Impacts	Errata
Ownership/Operations	Energy	Air Quality	

* General Opposition issues comprised 0.5% of total primary issues coded, while General Support issues comprised 7.4% of total primary issues coded.

4.3.2 Ashland/Hanover County Area (Alternatives Area 5) Alignments

In light of the public concerns over Project alternatives in the Ashland/Hanover area expressed during the alternatives development process, and the expressed desire of the community to be more engaged, DRPT established the Town of Ashland/Hanover County CAC. This forum provided more opportunity for the community to review and consider all of the alternatives. The Town of Ashland/Hanover County CAC was active as the Draft EIS was released, and DRPT did not recommend an alternative for Area 5 within the Draft EIS. Ashland/Hanover area alignment issues dominated the Draft EIS public comments, representing approximately 40 percent of the primary DC2RVA issues coded. Of the Ashland/Hanover area issues, 42 percent of the secondary issues coded indicated support for one or more of the alternatives in the Ashland/Hanover area, while 58 percent indicated opposition to one or more of the alternatives.

Among issues coded that indicated support for an alternative in the Ashland/Hanover area, 29 percent supported a below-grade alternative (a below-grade version of Alternatives 5B-Ashcake or 5D-Ashcake), which had the highest level of stated support for a capacity-increasing alternative in this area. 27 percent stated support for a 3-2-3 alternative (reflective of Alternatives 5A and 5A-Ashcake), 22 percent indicated support for a western bypass (reflective of Alternatives 5C and 5C-Ashcake), and 16 percent supported adding a third track through town (reflective of Alternatives 5B, 5B-Ashcake, and 5D-Ashcake). Additionally, less than 5 percent of the comments received stated support for other alternatives that were evaluated during the screening phase of the DC2RVA Project but were not advanced as alternatives in the Draft EIS, including: either an eastern bypass, I-95 alignment, and/or a Buckingham Branch alignment. DRPT coded the comments that mentioned any of these options favorably as "support" issues.

The spread of the Ashland alignment issues coded indicating opposition to an alternative tended to call out specific capacity-increasing alternatives, with approximately 42 percent indicating opposition to a western bypass option (reflective of Alternatives 5C and 5C-Ashcake), 27 percent indicating opposition to a third track through town (reflective of Alternatives 5B and 5B-Ashcake or 5D-Ashcake), and 27 percent indicating opposition to a below-grade through town alternative (a below-grade version of Alternatives 5B-Ashcake or 5D-Ashcake). Of all the Ashland/Hanover alignment opposition issues coded, less than 2 percent specifically expressed opposition to a 3-2-3 alternative (reflective of Alternatives 5A and 5A-Ashcake). Comment trends indicated that reaction was strongest to alternatives that created the greatest disruption to personal property and the environment.

4.3.3 Richmond Area (Alternatives Area 6) Alignments

DRPT received 1,034 comments with Richmond area alignments coded as the primary issue. Among those comments, close to 950 (92 percent) were form letters in support of DRPT's recommendations, including the recommendation for increased passenger rail service at Main Street Station (which is included in Alternatives 6D, 6E, 6F, and 6G). Among the Richmond alignment primary issues coded, 96 percent mention Main Street Station. Less than 5 percent mention Staples Mill Road Station (which is included in Alternatives 6A, 6E, 6F, and 6G), Boulevard Station (which is included in Alternatives 6B-A and 6B-S), or Broad Street Station (which is included in Alternative 6C). Verbal comments from the Draft EIS Public Hearing in Richmond on October 10, 2017, generally supported the DC2RVA Project, but expressed concern that the Project needed to demonstrate more sensitivity to cultural resources related to the slave trade in the Shockoe Bottom area surrounding Main Street Station.

4.3.4 Secondary Issue Trends

DRPT found that comments tended to contain common primary and secondary issue pairs, which indicated trends shown in the list below:

- The majority of economics comments related to construction costs (84 percent)
- The majority of roads/bridges comments related to vehicular traffic (97 percent)
- The majority of landowner-specific comments related to potential displacements (67.4 percent)
- Almost a third of the landowner-specific comments related to potential project effects on property access (29 percent)

These secondary issues represented the largest groups of recurring topics found in the Draft EIS comments and were consistent with the level of interest and outreach for these issues throughout the Draft EIS process.

4.3.5 Agency Comments

Of the 4,234 comments received, approximately 33 were from federal, state, or local agencies, organizations, or elected officials. Attachment B contains a broad summary of the comments received from these agencies, organizations, and elected officials. Note that all comments from all individuals and groups will be documented and addressed in the Final EIS; the description in Attachment B is a high-level summary only.

4.4 TOWN OF ASHLAND/HANOVER COUNTY AREA CAC PROCESS

The DC2RVA Draft EIS includes DRPT recommendations for a preferred alternative for most of the 123-mile DC2RVA rail corridor with the exception of Areas 1 and 5. Through the scoping, screening and alternatives analysis phases of the DC2RVA Project, DRPT considered nearly 30 different options and alternatives for adding rail capacity in Ashland and advanced seven Build Alternatives for evaluation in the Draft EIS. During the course of preparing the Draft EIS, DRPT met with the Town of Ashland, Hanover County, the public, and other stakeholders, and conducted a tour of the Ashland area with the CTB. In addition, DRPT received numerous comments and input from stakeholders in the Town of Ashland and Hanover County communities, as well as Randolph-Macon College. DRPT recognized that many of the alternatives for greater rail capacity in the Town of Ashland and Hanover County area generated community concerns.

DRPT recognized that each of the proposed Build Alternatives in Area 5 would have adverse consequences on the citizens and resources of the Town of Ashland or Hanover County, and there was no local consensus or preference for a Build Alternative. DRPT determined that expanded community involvement would inform decision-making. DRPT therefore did not identify a Recommended Preferred Alternative for the Ashland area in the Draft EIS. Within the Draft EIS, DRPT concluded the following:

- The existing railroad ROW through Ashland is limited and any alternative which adds a new track or new infrastructure will require additional ROW.
- The Town of Ashland, Hanover County, and other community stakeholders requested additional opportunities to be engaged in evaluating alternatives and developing possible mitigation strategies for the Ashland/Hanover County area.
- The seven Build Alternatives evaluated in the Draft EIS provide a reasonable range of alternatives that meet the Purpose and Need of the Project.
- Additional stakeholder input would benefit DRPT's analysis and inform the identification of the Commonwealth's Recommended Preferred Alternative through the Ashland area, while meeting the Purpose and Need for the full DC2RVA Project.
- The Commonwealth's Recommended Preferred Alternative for the Central Virginia and Richmond Areas (Areas 4 and 6, respectively) are neither contingent on nor do they limit any one specific alternative for the Ashland area (Area 5).

DRPT recommended a community-based effort to FRA to supplement DC2RVA public involvement activities and help inform selection of a Preferred Alternative that meets the Purpose and Need for the full DC2RVA Project with consideration for the potential impacts through the Ashland/Hanover County area.

4.4.1 Purpose of the CAC

DRPT convened the Town of Ashland/Hanover County CAC to review all previously considered options for greater rail capacity in the Ashland/Hanover County area, and to identify potential options that could meet the Purpose and Need of the full DC2RVA Project, while also minimizing or avoiding potential impacts to the community. The CAC was specifically requested to:

- Review all alternatives studied to date in the Draft EIS, including those presented in the Draft EIS or considered during the scoping and screening phases of the DC2RVA Project.
- Recommend alternative(s), including new alternatives or modifications to alternatives, to meet the Purpose and Need of the full DC2RVA Project. Should an alternative emerge that was not considered in the Draft EIS or was a modification to those presented, DRPT and FRA would define such an alternative in the Final EIS.
- Identify and represent the concerns of members' communities.
- Apply a structured and transparent approach seeking consensus.

4.4.2 CAC Approach

The CAC, composed of locally-appointed members of Hanover County, the Town of Ashland, Randolph-Macon College, the Richmond Regional Transportation Planning Organization, and CSXT, met five times in the Ashland/Hanover area between May and September of 2017.

- All meetings were open to the public.
- Meetings were video recorded and posted to the project website, www.dc2rvarail.com.

- Meeting materials were posted to the project website.
- Committee members were requested to share comments directed to them individually with other CAC members and the project team.

DRPT Director Jennifer Mitchell acted as chairperson for the meetings. DRPT staff and members of the DC2RVA consultant team provided the CAC with technical information and presentations on:

- Project background and regulatory requirements;
- Rail operations, modeling, and engineering;
- Potential effects of different alternatives; and
- Addressed questions posed by the CAC members and the public.

4.4.3 CAC Meetings

The CAC met monthly from May through September 2017, as follows:

- CAC Meeting #1: May 22, 2017
- CAC Meeting #2: June 26, 2017
- CAC Meeting #3: July 24, 2017
- CAC Meeting #4: August 28, 2017
- CAC Meeting #5: September 11, 2017

At the third CAC meeting, DRPT included in their presentation an overview of the refined operations modeling to validate the appropriateness of the infrastructure proposed by the Project. DRPT noted that a two-track alternative in Ashland was tested as part of the modeling (reflective of Alternatives 5A and 5A-Ashcake), and that the scenario met DC2RVA performance targets.

In addition to the five CAC meetings, the Town of Ashland hosted a meeting on September 6, 2017, to solicit public input regarding the through-town three-track trench option (a below-grade version of Alternatives 5B-Ashcake or 5D-Ashcake). DRPT attended the Town's meeting and presented information on the trench option including construction sequencing and potential effects. This meeting was open to the public.

DRPT staff and members of the DC2RVA consultant team also met individually with members of the CAC upon request to discuss members' technical questions. A summary of these questions, DRPT responses, and any materials generated were then shared with the rest of the CAC and posted to the project website.

4.4.4 Build Alternatives Considered by the CAC

The following list includes all of the alternatives that were considered by the CAC. Unless otherwise noted, alternatives listed were reviewed by DRPT in the Alternatives Technical Report (Appendix A of the Draft EIS), but not carried forward for detailed review in the Draft EIS.

Through-Town Alignments:

- At-Grade Options:
  - Minor Improvements in Ashland ("3-2-3" Option, with no additional track downtown)
    (Alternative 5A or 5A-Ashcake)
  - Add one track on the west of existing tracks
  - Add one track on the east of existing tracks (Alternative 5B or 5B-Ashcake)
  - Add one track and shift existing two tracks to center the three tracks (Alternative 5D-Ashcake)
  - Add one track and shift existing two tracks to center the three tracks AND remove station
- Elevated Options:
  - Elevate 1 track above existing two tracks
  - Elevate 2 tracks above existing two tracks
  - Elevate 3 tracks above existing right-of-way and remove at-grade tracks
- Below-Grade Options:
  - 1-track tunnel – Cut and cover tunnel east of existing two tracks
  - 1-track tunnel – Bore tunnel
  - 1-track tunnel – Deep bore tunnel
  - 2-track tunnel – One east and one centered
  - 3-track tunnel – Cut and cover continuous cover below existing right-of-way and remove at-grade tracks
  - Shallow bore 1-track tunnel for passenger trains only (proposed through CAC process)
  - 3-track trench (proposed through CAC process)

Eastern Bypass Alignments:

- Ashland East Bypass (AEB 1)
- Ashland East Bypass to BBRR (AEB 2)
- Ashland East Bypass That Does Not Cross I-95 (AEB 3)
- Ashland East Bypass in the I-95 Median (AEB 4)
- Ashland East Bypass White Paper Route (AEB 5)
- Buckingham Branch (BBRR):
  - Freight Diversion onto BBRR
  - Passenger Diversion onto BBRR
- Doswell Area Connections to Buckingham Branch Railroad:
  - Wye Options #1 - #5

Western Bypass Alignments:

  - Ashland West Bypass (AWB 1)
  - Ashland West Bypass Revision #1 (AWB 2)
  - Ashland West Bypass Revision #2 (AWB 3)
  - Ashland West Bypass Revision #3 (AWB 4) (Alternatives 5C and 5C-Ashcake)

4.4.5 Public Comments

All CAC meetings were open to the public, and a majority of Meeting #3 was set aside specifically for verbal public comment. In addition, the public was provided with several opportunities to participate and comment as described below:

- Public comment cards that were available at each meeting.
- Online comment submittals to www.dc2rvarail.com at any time.
- Post-meeting review of all meeting materials and presentations made available for public review on www.dc2rvarail.com.
- Public comments submitted to the project team and/or individual CAC members that were shared with the CAC.
- All public comments and questions were reviewed by the DRPT staff, and, as appropriate, responses were prepared and shared with the CAC.

It is important to note that the CAC process was not meant to replace the Draft EIS public hearings and public comment period. Members of the public were encouraged to also provide comments on the Draft EIS once the document was made publicly available on September 8, 2017.

4.4.6 Least Objectionable Alternatives

Over the course of five months, the CAC reviewed and fully evaluated over 30 different alternatives for the Town of Ashland/Hanover County area, including the seven alternatives for Area 5 that were included in the Draft EIS and new or modified alternatives suggested by the public or developed by the CAC. The CAC also considered hundreds of comments and questions provided by the public. The CAC determined that many of the alternatives were not practical, primarily due to cost or diminished ability to meet the Purpose and Need of the DC2RVA Project, including use of the Buckingham Branch Railroad, a deep bore tunnel, and adding tracks to the median of I-95. The CAC also unanimously rejected any option with three tracks at-grade through Ashland (reflective of Alternatives 5B, 5B-Ashcake or 5D-Ashcake) due to the perceived impacts to the residences, businesses, and Randolph-Macon College in downtown Ashland from Project construction and future rail operations. The committee recognized that all of the alternatives would have substantial adverse impacts to residents, commercial interests, and communities, and would be objectionable to one or more groups of stakeholders.

The CAC chose not to endorse any specific alternative. Instead, as documented in DRPT's September 19, 2017, memorandum to the CTB, the CAC identified three "least objectionable" alternatives, outlined below:

- **Least Objectionable Through-Town Alternative —"3-2-3" Option (Alternative 5A in the Draft EIS):** A third track would be added to the existing CSXT right-of-way north and south of the Town of Ashland, while the existing two tracks would remain in service through Ashland. Road overpasses would be added at Vaughan Road and Ashcake Road. The crossing at England Street would remain at-grade.
- **Least Objectionable Below-Grade Alternative—Three-Track Trench (modified below-grade version of Alternatives 5B-Ashcake and 5D-Ashcake):** A trench would be

constructed through Ashland approximately 50 feet wide and 33 feet deep, extending from north of Vaughan Road to south of Ashcake Road. The two existing tracks through the Town of Ashland, along with a third new track, would pass through Ashland within the trench. The trench would be provided with strategically placed covers interspersed with open areas, allowing motor vehicle and pedestrian crossings, landscaping, and other amenities. Details associated with the placement and length of covered spaces would be determined in final design. The downtown Ashland station would be closed.

- **Least Objectionable Bypass Alternative—Western Bypass Alignment "AWB 1" (modified version of Alternatives 5C and 5C-Ashcake):** In this option, a two-track bypass approximately seven miles long would extend around the Town of Ashland to the west. Roads bisecting the new bypass would be modified to avoid creating any new at-grade road/rail crossings. The two tracks through town would remain in service. This alternative includes the provision that the alignment would be adjusted to avoid directly impacting a commercial facility, and to minimize impacts to residential properties.

The CAC's review of alternatives and identification of a range of least objectionable alternatives was intended to inform the final determination of a Preferred Alternative for the Ashland/Hanover County area. The Commonwealth's Recommended Preferred Alternative for Area 5 is Alternative 5A, which meets the Purpose and Need for the DC2RVA Project with the least amount of impacts. Alternative 5A will have no Section 106 or 4(f) impacts, where all other alternatives considered or developed by the CAC include at least some impacts to cultural or historic resources.

4.5 COMMONWEALTH TRANSPORTATION BOARD ENGAGEMENT

Because of the scale of the DC2RVA Project area and budget, DRPT began briefing the CTB on DC2RVA in advance of procurement to prepare the EIS for the Project at the CTB Workshop on July 16, 2014. DRPT updated the Rail Committee informally through the scoping and alternatives development process as the Draft EIS was developed. DRPT provided a formal update at the September 20, 2016, Rail Committee and Workshop.

DRPT presented its preliminary recommendations for DC2RVA at the CTB Workshop on December 6, 2016, at the completion of the Administrative Draft EIS while it was in review by FRA. The recommendations presented in December 2016 were identical to those documented in this Recommendation Report, with deferral of a recommendation of a Preferred Alternative for Area 5 in the Town of Ashland/Hanover County Area.

As described in Section 3.4, Town of Ashland/Hanover County CAC Process, comments from local officials and citizens of this area requested that DRPT review its alternatives development process with greater public involvement. DRPT and community members engaged the CTB through updates and public comments at CTB workshops and Rail Committee meetings, as well as a CTB tour of the Town of Ashland and Hanover County on November 1, 2016. The tour served as a fact-finding mission for the CTB so that they could view the scale of potential rail alignments in relation to the existing landscape and receive an update on the overall Project. Local officials from the Town of Ashland, Hanover County, and Randolph-Macon College made welcoming remarks. These officials, along with citizen representatives from the community and representatives from CSXT, made up the CAC, which convened the following year.

DRPT made formal presentations to the full CTB and CTB Rail Committee throughout 2017:

- **February 15, 2017 CTB Rail Committee**
  - Reported on status of FRA's Draft EIS review, and DRPT's request to conduct a separate NEPA effort for the Ashland/Hanover area due to unique land use conditions and longer-range need.
- **April 18, 2017 CTB Rail Committee**
  - Reported that DRPT was preparing refined operations analysis to estimate that the infrastructure proposed in the Draft EIS will meet the Purpose and Need of the full DC2RVA Project, particularly with regard to the proposal to retain a two-track railroad through the Town of Ashland.
  - Reported that FRA could not separate the section for Area 5 through Ashland from the DC2RVA Project for further analysis in a separate NEPA effort, since the EIS for the DC2RVA Project provides an FRA Record of Decision for a contiguous corridor-wide service improvement from Washington, D.C., through Richmond, VA.
  - Conveyed that the CAC will be convened for the Ashland/Hanover area, and FRA supports the CAC process as additional community involvement to inform the development of the alternatives presented in the EIS.
  - Reviewed DRPT recommendations for Areas 1–6 and reported that the Draft EIS would not contain a DRPT recommendation of a preferred alternative for Arlington (Area 1) and Ashland/Hanover (Area 5).
- **September 19, 2017 CTB Rail Committee and CTB Workshop**
  - Presented results of the Town of Ashland/Hanover County Area CAC, in collaboration with CAC Member Barbara Nelson of the Richmond Regional Transportation Planning Organization.
  - CSXT expressed its concern that the DC2RVA Project with a constrained two-track alignment through Ashland (Alternative 5A and 5A-Ashcake) will negatively impact the freight network performance in 2045.
- **October 23, 2017 CTB Rail Committee**
  - Reported results of refined operations analysis validation modeling, which estimated that most freight delays outside of the Project corridor are caused by forecasted freight growth through 2045 and are not attributable infrastructure constructed or service improvements implemented under the DC2RVA Project, particularly with a two-track railroad through Ashland in Alternative 5A.
  - Recommended phased implementation and coordination with the railroads/operators to address potential future delays both inside and outside the corridor.
- **October 23, 2017 CTB Workshop**
  - Reviewed previous DRPT recommendations for each area of the DC2RVA corridor from north to south.
  - Reported on the Draft EIS Public Hearings and presented an interim comment summary.
- **November 9, 2017 CTB Rail Committee**

  - Held in Ashland. The Virginia Secretary of Transportation encouraged participation by all CTB members, not just CTB Rail Committee Members. 10 out of 17 CTB Members attended.
  - Presented results of the DC2RVA Public Hearing process and Draft EIS comment period.
  - Announced DRPT's Recommended Preferred Alternative as Alternative 5A, as defined in the Draft EIS, also known as "3-2-3", for the Town of Ashland/Hanover County area (Area 5).
  - Reviewed DRPT's rationale for both the Ashland/Hanover area and Richmond area recommendations.
  - Presented Draft CTB Resolution for the December CTB action.

- **December 6, 2017 CTB Action Meeting**
  - CTB voted to adopt a resolution with DRPT's Recommended Preferred Alternative for DC2RVA (Attachment A), defined as the Commonwealth's Recommended Preferred Alternative.

In addition to DRPT's presentations, members of the CTB had the opportunity to discuss issues and ask questions. Public comment periods were provided at each CTB Rail Committee and each CTB Action Meeting. Meeting minutes and video recordings of these meetings are available online at www.ctb.virginia.gov/public_meetings.

ATTACHMENT A: CTB RESOLUTION

Agenda item #14

RESOLUTION
OF THE
COMMONWEALTH TRANSPORTATION BOARD

December 6, 2017

MOTION

Made by: Mr. Brown, Seconded by: Ms. Valentine
Action: Motion Carried, Unanimously

Title: Recommendation of a Preferred Alternative for the Washington, D.C. to Richmond Southeast High Speed Rail Tier II Environmental Impact Statement

WHEREAS, the Commonwealth Transportation Board adopted Recommended Alternative A-Plus (see Attachment A), as set forth in the *Study Area Alternatives Recommendation Report for the Southeast High Speed Rail Tier I Draft Environmental Impact Statement*, dated March 5, 2002 which was subsequently adopted by the Federal Railroad Administration in the Tier I Final Environmental Impact Statement and Record of Decision; and,

WHEREAS, the Virginia Department of Rail and Public Transportation (DRPT), in conjunction with the Federal Railroad Administration, have continued to further the effort of implementing higher speed passenger rail service within the Southeast Rail Corridor by developing the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) project, a Tier II Environmental Impact Statement to identify a preferred alternative within the selected 123- mile corridor between Washington, D.C. and Richmond; and,

WHEREAS, DRPT conducted significant public and stakeholder involvement for the DC2RVA project including direct mail, newspaper advertisements, project website and social media campaigns, ten public meetings, five formal public hearings, and multiple local meetings and workshops; and,

WHEREAS, the DC2RVA Tier II Draft Environmental Impact Statement that evaluated multiple alternatives in six Alternative Areas along the CSX Transportation corridor between Washington, D.C. and Richmond was published on September 8, 2017 and was followed by a 60-day public comment period; and,

WHEREAS, DRPT included in the Draft Environmental Impact Statement a recommended preferred alternative for Alternative Areas 1, 2, 3, 4, and 6 of the DC2RVA study corridor as shown in Attachment B; and,

WHEREAS, DRPT limited the footprint of potential construction activities for DC2RVA project alternatives at Main Street Station, located in the Shockoe Bottom area of Richmond, in order to avoid and/or limit any potential impacts after evaluating, in a manner consistent with the Virginia Department of Historic Resources guidelines, and per the process set forth in Section 106 of the National Historic Preservation Act of 1966, the cultural resources in the Shockoe Bottom area of Richmond; and,

WHEREAS, DRPT has relied on a broad array of historical research to inform its layout of the DC2RVA improvements and to summarize available historical research and assets associated with the Shockoe Bottom slave trade, including areas for future slavery museums and memorials, five known archaeological sites, scholarly research on the Shockoe Bottom slave trade, current public commentary, and possible locations for additional historical and archaeological research and preservation, all to be summarized in a separate chapter of the Final Environmental Impact Statement as supplemental information that may be beneficial to future public and private decisions and actions in the Shockoe Bottom area; and,

WHEREAS, recognizing the unique nature of the region and concerns from the community over Draft EIS alternatives in Alternative Area 5 as shown in Attachment B, DRPT convened the Town of Ashland/Hanover County Community Advisory Committee, to take a more intensive look at all rail options that could meet the purpose and need of the DC2RVA project, while also minimizing or avoiding any potential impacts of those options; and,

WHEREAS, DRPT briefed the Commonwealth Transportation Board on DRPT's recommendation at its October 23, 2017 Workshop meeting and at its November 9, 2017 Rail Committee meeting on the outcome of the CAC process, being the following three least-objectionable alternatives for Alternative Area 5: maintain two tracks through the town of Ashland (5A), add a two-track west bypass (AWB1, previously screened out), and add a three-track trench through the Town of Ashland (variation of tunnel option previously screened out).

NOW, THEREFORE, BE IT RESOLVED, that the Commonwealth Transportation Board recommends to Federal Railroad Administration the following preferred alternative for inclusion in the forthcoming Rail Alignment Recommendation Report, Final Environmental Impact Statement and Record of Decision, in concurrence with DRPT's recommendation, in the following areas of the DC2RVA study corridor, as shown in Attachment B: Alternative Area 1-1A, 1B, or 1C; Alternative Area 2-2A; Alternative Area 3-3B; Alternative Area 4-4A; Alternative Area 5-5A; Alternative Area 6-6F.

BE IT FURTHER RESOLVED that the recommended preferred alternative for Alternative Area 1 (Arlington) will include the retention of all three alternatives 1A, 1B and 1C until after completion of the Long Bridge Tier II Environmental Impact Statement, whereby one of the three retained alternatives will be selected as the recommended preferred alternative based on compatibility with the Long Bridge Tier II Environmental Impact Statement preferred alternative.

BE IT FURTHER RESOLVED that if the Commonwealth Transportation Board on the recommendation of DRPT determines that additional rail capacity is needed in Alternative Area 5 to meet the performance standards required for additional passenger trains, DRPT shall conduct a new study based on updated information, including but not limited to future freight volumes, land uses, and capacity needs within the overall rail network.

BE IT FURTHER RESOLVED that the Commonwealth Transportation Board hereby directs DRPT to avoid and/or minimize any permanent property acquisitions, to the extent practicable, in areas where only two mainline tracks on the current alignment are recommended, and to avoid any permanent property acquisitions related to the DC2RVA project that would affect the operations of Randolph-Macon College.

BE IT FINALLY RESOLVED that the Commonwealth Transportation Board hereby directs DRPT to explore the need for other potential improvements in downtown Ashland (Alternative Area 5) that will help protect the safety of motorized and non-motorized roadway users, and to facilitate emergency access.

# # #

Attachment A

Excerpt from Record of Decision for the Tier I Southeast High Speed Rail Project

November 20, 2002

DECISION

The FRA and the FHWA working closely with NCDOT and VDRPT have selected the following build alternative for the SEHSR project for further Tier II environmental studies:

The preferred alternative consists of Alternative A (utilizing the S-line and the NCRR rights-of-ways) modified to include passenger connectivity to Winston-Salem, NC (Alternative B via the Winston Salem South Bound –WSSB and the K-line railroad rights-of-ways). The combination of Alternatives A and B best meets the project's purpose and need, while minimizing environmental impacts and has the highest level of public and agency support. VDRPT and NCDOT recommend that the Alternative A portion be developed first and that the Alternative B portion be developed in conjunction with the efforts of the Piedmont Authority for Regional Transportation (PART), as appropriate. PART is responsible for coordinating the regional transportation system in the counties around the Winston-Salem connection. The combination of Alternative A and Alternative B has:

- Minimized potential impacts to wetlands and threatened and endangered species;
- Moderate levels of potential environmental complexity;
- Strongest agency support;
- Highest level of service;
- Highest projected annual ridership;
- Largest combined trip diversions from auto and air to rail, with competitive total travel time;
- Second best net reduction in NO_x emissions and overall net energy use reduction;
- Best potential operating cost recovery; and
- Highest level of public support.

As identified in the FEIS, the preferred alternative is also the environmentally preferred alternative.

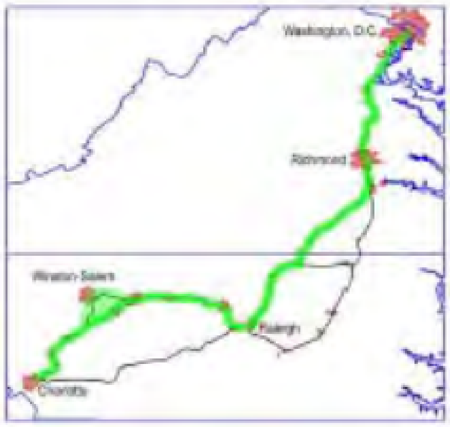

Figure 1
Preferred Alternative
Alt. A + Alt. B

Attachment B

Description of DRPT's Recommended Preferred Alternative for DC2RVA

ALTERNATIVE AREA 1: ARLINGTON (LONG BRIDGE APPROACH)
Location: CFP 110 - CFP 109.3
Recommendation: Retain Alternative 1A, 1B, and 1C to support a deferred selection until after completion of Long Bridge Study
Approximate Length: 1 Mile

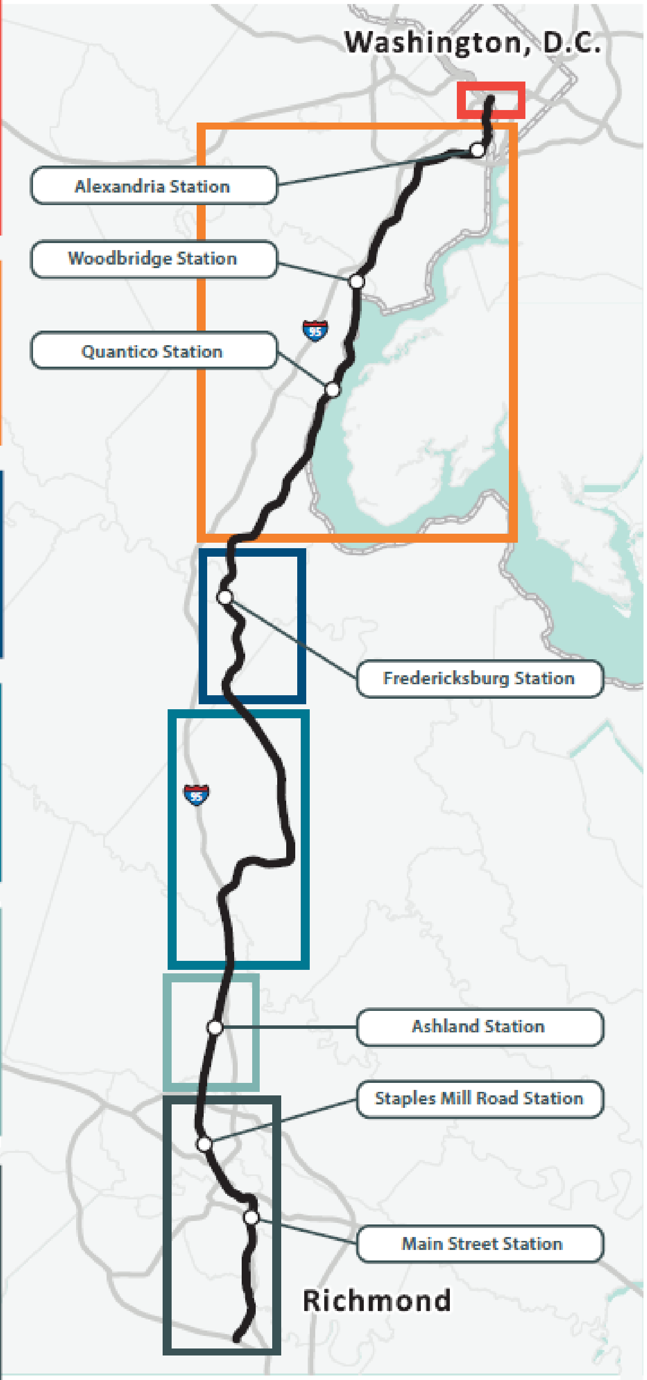
ALTERNATIVE AREA 2: NORTHERN VIRGINIA
Location: CFP 109.3 - CFP 062
Recommendation: Alternative 2A
Add a Third or Fourth Track
Approximate Length: 47.3 Miles

ALTERNATIVE AREA 3: FREDERICKSBURG
Location: CFP 062 - CFP 048
Recommendation: Alternative 3B
Add a Third Main Track through City
Approximate Length: 14 Miles

ALTERNATIVE AREA 4: CENTRAL VIRGINIA
Location: CFP 048 - CFP 019
Recommendation: Alternative 4A
Add a Third Main Track
Approximate Length: 29 Miles

ALTERNATIVE AREA 5: ASHLAND
Location: CFP 019 - CFP 009
Recommendation: Alternative 5A Maintain Two Tracks Through Town, Add a Third Main Track north and south of Town
Approximate Length: 10 Miles

ALTERNATIVE AREA 6: RICHMOND
Location: CFP 009 - A011 Centralia
Recommendation: Alternative 6F
Main Street Station
and Staples Mill Road Station
Full Service with S-Line Improvements
Approximate Length: 23 Miles



Washington, D.C.
Alexandria Station
Woodbridge Station
Quantico Station
95
Fredericksburg Station
95
Ashland Station
Staples Mill Road Station
Main Street Station
Richmond

ATTACHMENT B: SUMMARY OF MAJOR COMMENTS

B.1 FEDERAL

Advisory Council on Historic Preservation (ACHP)

The ACHP requested clarification on the Federal Rail Administration (FRA) and Virginia Department of Rail and Public Transportation (DRPT)'s coordination process with ACHP with regard to the Process Programmatic Agreement[4] and Memorandum of Agreement[5] for Section 106 of the National Historic Preservation Act, and indicated a need for continued coordination in the future.

American Battlefield Protection Program (ABPP), National Park Service (NPS)

The ABPP reviewed battlefield resources included in the archaeological and architectural Area of Potential Effect (APE) and expressed concern about the proposed project alignment and potential impacts to Civil War battlefield sites. ABPP requested that project reports be submitted as they are completed rather than as a group, and that they show actual Limits of Disturbance for proposed alignments instead of the buffers from the alignment centerline. The ABPP determined that the project APE intersects 11 priority battlefields identified by the Civil War Sites Advisory Commission in 1993 and again in 2011 by the ABPP. The ABPP recommended a "Key Terrain Observation and Fields of Fire, Cover and Concealment, Obstacles, Avenues of Approach" (KOCOA) analysis be completed for the battlefields identified and recommended that rail lines be evaluated for their connections to the battlefields.

Department of the Interior (DOI)

The DOI encouraged continued outreach and coordination with relevant agencies on the Section 4(f) Evaluation and identified the George Washington Memorial Parkway and the Potomac Heritage National Scenic Trail as potential additional targets of outreach and inclusion in an agreement to be drafted with affected agencies determining the effects on NPS and other Section 4(f) properties. The DOI stated that it was unable to provide concurrence until a formal determination is provided in the Final Environmental Impact Statement (EIS) and the Final Section 4(f) Evaluation. The DOI expressed concern regarding some "de minimis" impact determinations made at NPS sites, citing that impacts should be assessed on the smaller, individual units of which some of the sites are comprised, and that the historic nature of some of the resources may require Section 106 review. DOI also indicated that removal and replacement of vegetation along the corridor should be a consideration in impact determinations.

---

[4] "Programmatic Agreement Among the Federal Railroad Administration, the Virginia State Historic Preservation Officer, the North Carolina State Historic Preservation Officer, the Virginia Department of Rail and Public Transportation, the North Carolina Department of Transportation, Rail Division, and the Advisory Council on Historic Preservation Regarding Compliance with Section 106 of the National Historic Preservation Act for the Proposed Southeast High-Speed Rail Project," April 12, 2016.

[5] "Memorandum of Agreement Among the Virginia Historic Preservation Office, the Federal Railroad Administration, and the Virginia Department of Rail and Public Transportation Regarding the Southeast High Speed Rail Project, Richmond, Virginia to the North Carolina State Line," January 11, 2017.

Environmental Protection Agency (EPA)

The EPA requested that the Project team work in cooperation with EPA, the United States Army Corps of Engineers (USACE), and other federal agencies throughout the EIS process, noting that additional analysis may be necessary if new alternatives develop. EPA assigned a rating of the Preferred Alternative as Environmental Concerns- Insufficient Information (EC-2) and Arlington section as Lack of Objections (LO).

EPA requested clarification on why accommodation of freight traffic is a project purpose and need, but not mentioned as a need for the larger Southeast High Speed Rail (SEHSR) program, and suggests identification of hazardous materials being moved in the corridor and addressing how an accidental release would be managed. EPA requested clarification on whether impacts from construction and operations are considered in the limits of disturbance. EPA suggested clarification of assessment methodologies used for aquatic impacts and continued coordination with the USACE. The EPA also suggested that potentially unmitigable habitats be identified, and that assessment of potential for drinking water contamination and efforts to minimize risk to drinking water be clearly described in the document.

EPA requested coordination with the United States Fish and Wildlife Service (USFWS) and other state and federal agencies to identify and protect rare and endangered species, and that infrastructure resiliency to extreme weather events be discussed. EPA recommended that stormwater management facilities utilize green infrastructure where appropriate and that facilities not be placed in wetlands or aquatic habitats. Clarification was sought by EPA on noise analysis in the corridor and suggested adding future commuter/freight rail to the project analysis. EPA stressed the importance of fully considering impacts to Environmental Justice communities, and asked that aquatic habitats, environmental fragmentation, and noise be addressed as indirect and cumulative impacts.

Federal Aviation Administration (FAA)

The FAA voiced support for the project and determined that it presently had no federal action or approval on the effort. The FAA did stress that rail improvements in the project corridor were just one part of a solution to aviation congestion at the national level.

National Park Service (NPS)

The National Capital Region of the NPS commented that the Draft EIS did not specify any actions such as access permits, special use permits, or land exchanges that might require a federal decision from NPS, nor did it indicate areas where NPS would be directly impacted. NPS commented that the Purpose and Need should recognize multimodal connections and identify connections to outdoor recreational activities, and should include a thorough description of mitigation opportunities. The NPS requested that the George Washington Memorial Parkway (GWMP) be added as a Section 106 Consulting Party, and requested that the GWMP be added as a cooperating agency if it is anticipated that the Parkway would be approached for any type of permit.

NPS indicated that the boundaries shown in the Draft EIS for Roaches Run were not consistent with NPS records. NPS requested that the Parkways of the National Capital Region and the

Green Scenic Easement Area be included, and that the NPS be mentioned in the "Parklands, Recreational Areas, and Refuges" section. They asked for clarification of noise and vibration impacts, as well as the potential impacts of permanent or temporary vegetation removal, and suggested that connections between stations for cyclists and pedestrians should be included in project design. NPS asked for further clarification/information on stormwater management and the possible effects of the project on runoff.

The NPS submitted comments on behalf of the Captain John Smith Chesapeake National Historic Trail. Concerns included the misidentification of the trail and recognition solely for the portion in the Richmond section (trail extends throughout the Chesapeake Bay and its major tributaries). The NPS indicated that many of the water crossings within the project area are either on or within the viewshed of the trail and that a new crossing of the Rappahannock or the James rivers should be evaluated for visual impacts and that navigational/construction impacts of other bridges along the trail should be minimized for recreational users.

The NPS submitted comments on behalf of Fredericksburg & Spotsylvania National Military Park (FRSP) and Richmond National Battlefield Park (RICH). NPS indicated that the boundary of the railroad right-of-way through the FRSP shown in the Draft EIS does not agree with park records and that NPS permission must be sought for construction on park property. NPS raised concerns over trains potentially queueing along rail right-of-way in the parks due to timetable changes and the associated scenic impacts. NPS did voice appreciation over DRPT coordination over the Richmond National Battlefield Park and Maggie Walker National Historic Site.

NPS also submitted comments on behalf of the ABPP. These comments included a recommendation for a KOCOA analysis to be performed for the battlefields that intersect with the project APE. The NPS voiced support for alternative 3A (maintain two tracks through town) and alternative 3C (East Bypass) through the Fredericksburg area due to fewer impacts to battlefield resources. NPS offered ABPP staff resources to provide technical assistance and materials for identifying battlefield resources near Richmond, and asked for clarification on how increases in visits to battlefields in the corridor were considered in assessing impacts.

U.S. Army Corps of Engineers

The USACE recommended continued coordination on the Preferred Alternative. USACE will consider the Preferred Alternative with regard to aquatic resource impacts and practicability. USACE noted a shift to greater emphasis on freight rail in the Draft EIS as compared with the SEHSR Tier I Purpose and Need. The USACE requested an analysis of the practicability of continuing to accommodate freight and passenger rail traffic on existing rail facilities, which could have bearing on relative impacts to aquatic resources.

B.2 STATE

Virginia Department of Environmental Quality (DEQ)

DEQ noted several state permits related to wastewater and streams, and directed DRPT to coordinate with the USACE on any proposed wetlands impacts. DEQ recommended specific construction techniques for repairing and replacing wetlands post-construction. In addition, DEQ asked DRPT to consider using sustainable and context-sensitive construction techniques such as permeable parking lots and consideration of low-emissions construction equipment use in areas with pollutants at non-attainment levels. DEQ also recommended that DRPT take care in disposal of hazardous waste from railroad sites along the corridor and dispose of all waste in accordance with federal and state laws and guidelines.

Virginia Department of Historic Resources (DHR)

DHR requested that DRPT continue its consultation with DHR on issues related to the Section 106 process.

B.3 LOCAL

Arlington County

Arlington County requested that DRPT verify that any proposed infrastructure south of Long Bridge (Area 1) would not impact plans for an expanded aquatics center at Long Bridge Park to the west of the tracks. In addition, the County had concerns about potential impacts to Roaches Run Waterfowl Park on the east side of the tracks in Area 1 of the study. Habitat protection and control of invasive plants in these sections of the corridor were the County's highest concerns, as well as preservation of open space around Long Bridge Park and the planned extension of the pedestrian esplanade at the park.

City of Alexandria

Alexandria expressed concerns about potential private property impacts within the City and possible impacts on future planned development. Alexandria sought clarification on the impacts and scheduling of construction activities and the potential impacts of these activities on adjacent improvement projects. The City expressed particular concern about the potential for increased noise and vibration from increased train traffic in the corridor and from associated construction impacts. The City requested more information on potential impacts on existing bridges and on maintenance of rail operations during construction, as well as traffic impacts generated by increased ridership. The City had numerous questions and corrections relating to parks and recreational resources including potential impacts and resources that had not been identified in the document. The City also voiced concerns about potential impacts to wetlands and impacts to water quality.

Fairfax County

Fairfax County voiced support for the project and for increased rail capacity in the corridor. The County expressed concerns about potential impacts to water quality in the Pohick Seeps conservation area and requested continuing consultation with County staff. The County identified a number of potential impacts to parklands, with particular concern for Old Colchester and Mason Neck West parks.

Prince William County

Prince William County requested that DRPT plan for at least one of the highest speed trains (the County used the term "ACELA") to stop at the Woodbridge Station. The County indicated that a stop at Woodbridge would better serve the surrounding community than a stop at Franconia-Springfield. The County requested that the Firestone Road crossing be planned for grade-separation to enable better emergency response to the neighborhoods on the east side of the tracks. The County shared several requested text changes to the body of the Draft EIS. Prince William requested that DRPT coordinate with the County on construction of a new Occoquan River bridge, as it would be a highly visible gateway landmark into the north portion of the County from Route 1. The County was concerned about visual impacts to the viewshed to

Neabsco Creek from Rippon Lodge and requested that potential impacts to Rippon Lodge be included in the Final EIS and any future Section 106 Memoranda of Agreements. The County expressed concern about potential impacts to Cockpit Point Civil War Park, as the eastern side of the park is not currently accessible over the railroad tracks today. Future increases in train traffic could eliminate the potential for creating a public crossing. The County requested that such a crossing be considered during mitigation.

Spotsylvania County

Spotsylvania County asked about the presence of an alternative to the main DC2RVA corridor in the event of a natural or man-made disaster, and questioned if three tracks in one location for the entire length of the corridor would be "putting all eggs in one basket." The County mentioned proposed greenways and pedestrian paths planned in the corridor and stressed that bike/pedestrian-friendly crossings should be taken into consideration. The County corrected the spelling of a roadway and raised issues with flow/tone of certain sections of the Draft EIS. The County also suggested to DRPT to consider the Spotsylvania County Comprehensive Plan to widen Lansdowne Road in the design for a road bridge at this location. Finally, Spotsylvania pointed to an unsafe situation at the intersection of Mine and Benchmark Roads, and called on the study to indicate an upgraded quad-gate configuration at this location.

City of Fredericksburg

The City of Fredericksburg's comment identified planned railroad crossings that the City would like to see widened from their current size to accommodate future roadway capacity. The City also asked that DPRT work with the City to ensure any new passenger station elements are constructed in keeping with the architectural and historical nature of the City, including any parking facilities. They also asked that DRPT consider constructing two separate sound walls in areas of the City where the third track will come close to structures. The structural integrity of the existing rail viaduct was a major concern for the City and will require further coordination to improve pedestrian crossings under the railroad tracks when improvements are made.

Hanover County

The comments received from Hanover County focused on the bypass and through-town alignment alternatives examined by the project for the Ashland/Hanover area. The County commented that Alternative 5A (Maintain Two Tracks Through Town)—also known as "3-2-3" —is the sole alternative that warrants further consideration. The County pointed to potential impacts of 5C (Add Two Track West Bypass) related to wetlands, water quality, property, noise and vibration, aesthetics, cultural resources, wildlife habitat, and transportation. The County also included a resolution of the Hanover County Board of Supervisors dated October 11, 2017 stating the County's opposition to a Western Bypass alternative and to the addition of a third track at-grade through the Town of Ashland.

Town of Ashland

The Town of Ashland sent a letter with a link to a video produced by Kathy Abbot, a member of the Ashland Town Council. The video described how a trench would be detrimental to the town during both construction and post-construction periods. The video urged citizens of Ashland to support the 3-2-3 alternative, rather than a trench through town. The Town also provided comments supporting a deep bore trench beneath the Town as a preferred alternative.

Henrico County

Henrico County was supportive of the recommended preferred alternative in the Richmond area (Alternative 6F). The County recognized revitalization and reinvestment opportunities possible around Staples Mill Road Station. The station and the adjacent Staples Mill Road corridor were included in the Henrico County Vision 2026 Comprehensive Plan, with the station as the focal point of redevelopment. The County also indicated that additional mitigation measures might be necessary for residential parcels affected by construction noise and loss of vegetation along the railroad tracks when an additional rail is built north of Staples Mill Road Station.

B.4 TRANSPORTATION STAKEHOLDERS

CSX Transportation (CSXT)

CSXT submitted comments accompanied by a report performed by Cambridge Systematics that analyzed results of operations modeling performed by DRPT. CSXT commented that infrastructure improvements proposed in the Draft EIS are insufficient to support contemplated increases in passenger traffic. The following themes were prevalent throughout CSXT comments:

- Draft EIS is consistent with FRA requirements, however, there are weaknesses in DRPT's capacity analysis, including:
  - Proposed infrastructure improvements are not sufficient to enable reliable operations of projected train schedules
  - The burden of extended running times and freight delays fall on CSXT's freight traffic
  - Modeling does not "follow best practices"
- Passenger trains will hinder CSXT's future use of any available capacity
- "3-2-3" Alternative in Ashland will be a major bottleneck for freight operations
- Recommended preferred alternative does not have significant freight benefits
- Projected freight delays were expected to be much higher than base case delays
- None of the original 2045 modeling cases "dispatched" to completion—the second round of revised modeling did better, but not overall satisfactorily
- Consider alternative capacity configurations, including:
  - Four tracks in parts of the corridor
  - Use of the Buckingham Branch for some through-traffic and integrating the Buckingham Branch into full modeling, not just as a stand-alone analysis

Norfolk Southern (NS)

Norfolk Southern indicated that they were concerned with the Draft EIS proposing operational changes to Amtrak trains outside the immediate corridor of study. Specifically, NS cites the assumption to add three daily round-trip frequencies to the Norfolk service as problematic. NS claimed that the three additional trains could not be added to service without an agreement from them, which has not been negotiated at this point. In addition, NS took issue with the No Build scenario containing mention of the Amtrak Cardinal long distance train being made a daily service, from its current three-times-weekly frequency. NS also took issue with the assumption of a second round-trip frequency to Lynchburg in the no-build scenario. For these additional trains to be added, NS claimed that additional environmental review, as well as an operating agreement, would need to be signed.

Virginia Railway Express (VRE)

VRE expressed appreciation for the Draft EIS effort by DRPT and its collaboration. VRE supported the conclusions of the Draft EIS that improvements to railroad capacity will bring benefits to both VRE and other rail users. VRE expressed issues with design details of proposed additional tracks through VRE stations, however, were eager to help resolve these issues. In addition, VRE had questions about noise and vibration analyses, but was confident that the Final EIS will resolve these issues. VRE supported the goals of DC2RVA and welcomed the opportunity to work with DRPT on capital and operating plans that will meet the intercity and commuter train needs of the corridor.

Washington Metropolitan Area Transit Authority (WMATA)

WMATA commented that it has a "zone of influence" policy for all construction projects adjacent to its right-of-way. All construction actions taking place within this zone (a zone boundary that often falls outside of WMATA's right-of-way) must be coordinated with WMATA's Joint Development and Adjacent Construction (JDAC) Office and approved by WMATA. WMATA also drew attention to the construction of the Potomac Yard metro station as a project that requires coordination between DC2RVA and WMATA. Additionally, WMATA urged DRPT to verify ownership of parcels in the Potomac Yards area, especially the parcels that contain CSXT's right-of-way. WMATA also indicated that the construction of a retaining wall in the Alexandria area proposed by DC2RVA would create a reflective surface for WMATA train noise to the detriment of those who live on the side of the tracks. WMATA urged DPRT to include this additional impact in the EIS.

B.5 OTHER ORGANIZATIONS

Randolph-Macon College

Randolph-Macon College was adamant in its opposition to a third rail through Ashland and proposed parking facilities on campus land at the Ashland station. The College commented that a 3-2-3 option will have negative impacts in the long term on the ability for students to safely cross the tracks to access both sides of campus. The College requested that DRPT consider pedestrian under/overpasses at more than one location to accommodate this passage. The College supported the western bypass option AWB 1 as its preferred alternative in the Ashland/Hanover area.

Hampton Roads Chamber of Commerce

The Hampton Roads Chamber expressed their concern that proposed infrastructure in the Draft EIS should be sufficient to accommodate present and future freight demands to the Port of Virginia, a major economic driver in the region. The Chamber generally supported increased passenger rail service to Hampton Roads, but without limiting the value of freight service to the region.

Historic Richmond

Historic Richmond supports DRPT's recommended preferred alternative 6F in the Richmond area. The group expressed their desire to see Main Street Station as the "gateway to the city" like it was years ago. Historic Richmond mentioned that Main Street Station provides the traveling public with: a connection to downtown, expanded multimodal connectivity, a connection to Richmond's vibrant historic urban core, and a competitive transportation choice for intercity travelers. Historic Richmond warned that extra care should be taken to preserve historic structures in Shockoe Bottom, including the Loving's Produce Company building. In addition, the group asked DRPT to do the following things: commission a thorough archeological, historic, and cultural resources study in Shockoe Bottom, conduct a comprehensive archeological survey, create a Devil's Half Acre Memorial Park through donated funds, encourage the City to adopt a form-based code or design overlay district in Shockoe Bottom, conduct research on nearby named resources, and coordinate with other projects in the area. Finally, Historic Richmond stated that if alternative 6F were not selected, the group would support either a single station location at the Boulevard or Broad Street.

National Trust for Historic Preservation (NTHP)

The NTHP asserts that potential impacts to Shockoe Bottom have not been adequately addressed in the study. They point to the history of the slave trade and the efforts to build a nine-acre memorial park to memorialize the activities that occurred at the site. The NTHP recommends that the Area of Potential Effect be expanded to include two additional sites, pointing out that they have "in-place" significance for their association with historical events. The NHTP states that the Draft EIS does not fully consider potential indirect and cumulative impacts in Shockoe Bottom and recommends they be studied fully and mitigation efforts considered. They further state that the project will result in a Constructive Use of the resources under Section 4(f) within Shockoe Bottom and that avoidance or mitigation of the potential impacts must be considered.

Preservation Virginia

Preservation Virginia noted that Shockoe Bottom has important archaeological, cultural, and historic resources, much of which has been paved over, and the Devil's Half Acre is the only portion of Shockoe Bottom that has been evaluated. They recommended that prior to finalization of the study, a comprehensive analysis for those resources located in Shockoe Bottom be conducted, that the area should be evaluated for listing on the National Register of Historic Places, and that the Area of Potential Effects for the study be expanded to include those resources identified by the comprehensive analysis. Preservation Virginia also requested that direct and cumulative impacts to the resources in Shockoe Bottom be considered, and noted that they have worked with the NTHP on a conceptual plan for a memorial park in that location.

Sierra Club

The Sierra Club (Falls of the James section) expressed support for the project and advocated that toll money from HOT lanes in the corridor should be available for rail projects. The Club also supports a station location at Main Street, and indicates that a new station in a new location would be wasteful of investment already made in Main Street Station. The Club indicated that construction should meet high standards for sediment and erosion control and promoted a proposed north-south bikeway along the rail corridor. The Sierra Club also expressed its preference for solar powered facilities in future rail projects.

Southern Environmental Law Center (SELC)

The SELC expressed strong support for the project and efforts to provide improved passenger rail service in the corridor. The SELC recommended that the final set of recommendations for the corridor identify specific near- and intermediate-term projects and the anticipated costs and benefits of each project, to reduce the resistance to cost of the total package of recommendations. SELC urged DRPT to continue efforts in the spirit of the Tier I EIS by advancing projects incrementally and within the existing right-of-way wherever possible to minimize harm to the natural and physical environments. In addition, the SELC expressed concern for the western bypass in Hanover, and recommended that the trench option in Ashland be considered due to potential impacts of the western bypass. The Fredericksburg east bypass should also be removed from consideration due to potential adverse impacts. The SELC supported a two-station option in Richmond, with Staples Mill and Main Street stations serving as the suburban and urban stations, respectively. The A-Line passenger train rights should not be ceded to CSXT, and Virginia should be very careful about giving up any capacity or access that may be needed later. The SELC is aware of DRPT's cooperation with the City of Richmond and stakeholder groups on preserving and protecting the integrity of the Devil's Half-Acre slave site, however, the SELC requested that these resources be cited in the Final EIS. Finally, the SELC expressed its concern with the project's relationship with the host railroad CSXT and the practicalities of various potential improvements given this relationship.

The Civil War Trust

The Civil War Trust commended DRPT for carefully studying and identifying potential impacts to all battlefield sites in the corridor. The Trust indicated that it has an interest in continuing to monitor the DC2VA effort and requested that DRPT provide the Trust the opportunity to consult with the DC2RVA team at the earliest time. Furthermore, the Trust encouraged DRPT to continue coordination with NPS's American Battlefield Protection Program, especially with any future KOCOA analyses required.

Virginians for High Speed Rail

VHSR urged DRPT to complete the DC2RVA study in a timely manner and pointed to congestion on I-95 and population growth projections as reasons not to delay the study. VHSR endorsed further study of a trench option in Ashland to provide future capacity. The 3-2-3 option, according to VHSR, would create a bottleneck later in time that has the potential to negatively affect passenger rail service on the entire east coast. In Richmond, VHSR asked that rail service be high-performance, if not high-speed—competing with highway travel for multiple types of users. The state should not cede access to the A-Line for passenger rail, as retention of the A-Line allows for a redundant rail system in the event of a system disruption on the S-Line. Retention of the A- Line also prevents a situation where CSXT no longer has the obligation to maintain the line to passenger rail standards. In addition, VHSR questioned whether all trains would need to stop at Main Street Station as service is added incrementally. VHSR recommended that DRPT show cost projections that reflect incremental implementation with focus on near-term projects with realistic opportunities for funding. In addition, VHSR enumerated several text errors found in the body of the Draft EIS.

Virginia Chamber of Commerce

The Virginia Chamber indicated its support for the goal of additional passenger service between Richmond and Washington, D.C., but urged DRPT to attain this goal without negatively influencing Virginia's freight rail network. The Chamber indicated that without the necessary capacity, bottlenecks will delay passenger and freight trains and negatively affect state and regional economies.

Virginia Maritime Association (VMA)

VMA encouraged a comprehensive assessment of impacts to freight rail and steps to ensure efficiencies in the freight rail system that will meet the current and future needs of Virginia businesses and a growing Port of Virginia.

B.6 ELECTED OFFICIALS

Spotsylvania County Supervisor Greg Cebula

Mr. Cebula commented that there is no support for Alternative 3C (Fredericksburg East Bypass) and stated that he supported DRPT's recommended preferred alternative in Area 3: one additional track built to the east of the existing two tracks through Fredericksburg.

Virginia Delegate Buddy Fowler Jr.

Delegate Fowler pointed to the data in the Draft EIS that indicates that two tracks through Ashland would have far fewer impacts on environmental resources, farmland, and commercial properties than any other alternative. The 3-2-3 is consistent with the Tier I EIS's Record of Decision, which calls for an incremental approach to building the corridor. He mentioned that any changes in technology in the future might make current predictions uncertain. Furthermore, the Delegate mentioned that it would be impossible to predict federal funding levels for projects such as these 25 years in to the future.

Hanover County Supervisor Wayne Hazzard

Mr. Hazzard commented that two tracks in Ashland will be sufficient to handle the traffic projected in the future. He asked that the community support the 3-2-3 option in Ashland and that DRPT endorse that alternative. The 3-2-3, according to Supervisor Hazzard, would eliminate a cloud of uncertainty that is hanging over Ashland's business community and western Hanover's residents.

Hanover County Supervisor Aubrey Stanley

Mr. Stanley indicated his support for a 3-2-3 option in Ashland and pointed to a Hanover County resolution that the Hanover County Board passed recently that urges DPRT to endorse the same. He mentioned the prospect of future transportation technology that may change transportation operations and/or needs in the corridor. He mentioned the possibility of using the Buckingham Branch for some freight diversion and indicated that overpasses at Vaughan and Ashcake Roads are much less expensive to construct than a bypass or third track though town, and are needed in the community today to address safety access and traffic backups.

Town of Ashland Mayor James Foley

Mayor Foley stated that he supported the 3-2-3 option, however, recognized that it would be a short-term solution to a longer-term issue. He stated that a third track through town in any form, be it a trench or an at-grade solution, would irreparably harm the Town of Ashland. The Mayor understood that the western bypass opponents who were advocating for a trench in Ashland were not necessarily advocating for the destruction of the town, rather that they did not want a railroad where there was not already one.

City of Richmond Mayor Levar Stoney

Mayor Stoney applauded DRPT for selection of an alternative in Richmond that preserves and enhances Main Street station as a rail gateway. He commented that he expected DRPT will correct minor copy errors in the text of the Draft EIS that omitted certain trains from the list of trains planned to stop at Main Street Station. Additionally, Mayor Stoney requested that DRPT consider 1200-foot platforms and full checked baggage service at Main Street Station in the Service Development Plan and included in 30 percent Preliminary Engineering. In addition, Mayor Stoney requested that safe crossings for pedestrians and cyclists be maintained at all grade crossings in the City, and to verify that plans for grade crossings are up-to-date with City plans for pedestrian and cyclist facilities at these crossings. The mayor's comments indicated that care should be taken when considering land disturbing activities within the Shockoe Valley and Tobacco Row historic districts. The Cultural Context and Thematic Study for the Proposed Revitalize RVA Project prepared by Dutton + Associates LLC in 2013 identified a number of areas with potential for significant archaeological deposits within the Area of Potential Effects (APE) on the east side of the train shed extending from Main Street to the I-95 interchange. The DC2RVA Project should be coordinated with the VDOT I-95/Broad Street interchange upgrades project to assess the combined impact on historic resources in the Shockoe Valley historic district.

City of Richmond Councilwoman Kimberly Gray

Ms. Gray indicated her support for a single rail stop in Richmond at the Boulevard. She mentioned that the two-station stop is costly and does not save enough rail travel time. She expressed concern about the potential for traffic caused by a busier Main Street Station. In addition, Ms. Gray commented that the Devil's Half-Acre slave jail site is the greatest asset near Main Street Station and needs to be memorialized with a site and museum.

APPENDIX J

RICHMOND AREA TURNING WYE AND SERVICE YARD ALTERNATIVES TECHNICAL MEMO

D.C. TO RICHMOND SOUTHEAST HIGH SPEED RAIL

MEMORANDUM

Date:	May 15, 2018
To:	Virginia Department of Rail and Public Transportation
From:	DC2RVA Project Team
Subject:	Richmond Area Turning Wye and Service Yard Alternatives

1.0 SUMMARY

DRPT's recommended preferred alternative in the Draft Environmental Impact Statement (EIS) for the Richmond Area, Build Alternative 6F – Full Service, Staples Mill Road/Main Street Stations, includes a new turning wye track at Hospital Street connecting the CSXT S-Line with the Buckingham Branch Railroad, and the addition of three siding tracks at the former CSXT Brown Street Yard for overnight storage and servicing of a passenger train. A turning wye and overnight storage/servicing yard are necessary to support a new passenger train roundtrip with an early morning departure from Richmond north, and an evening southbound arrival into Richmond. In response to comments on the Draft EIS and to reduce the impacts associated with the new turning wye track at Hospital Street and the passenger train storage and servicing facility at Brown Street Yard, DRPT has relocated the Richmond area turning wye and passenger train service yard to CSXT's existing Bellwood Wye and Yard, south of the James River. Relocating the proposed facility from Hospital Street/Brown Street Yard to Bellwood Yard will improve the efficiency of train operations, reduce property impacts outside of CSXT's right-of-way, and reduce the rail footprint within the culturally sensitive area of Richmond's Shockoe Valley.

2.0 BACKGROUND AND PURPOSE

The DC2RVA passenger service plan includes a new intercity passenger train roundtrip that originates in Richmond in the early morning (approximately 6:00 am) and proceeds north towards Washington, D.C. The need for an early morning departure to Washington, D.C. was identified during project scoping. A southbound train would return to the Richmond area later in the day and would be stored overnight in the Richmond area for servicing. Infrastructure improvements required to support this train include a turning wye to turn the train around and a yard with at least two siding tracks where the train can be parked overnight for servicing and storage.

In the Draft EIS description of the recommended preferred alternative for Area 6, Build Alternative 6F – Full Service Staples Mill Road/Main Street Stations, DRPT proposed construction of a new single wye track connecting the S-Line to the Buckingham Branch at Hospital Street north of Main Street Station to turn passenger trains (see Figure 1, also shown in

Figure 5.1-21 within the Draft EIS). Three siding tracks would be added at the location of the former CSXT Brown Street yard for overnight parking and servicing of the passenger train. The service yard would also need road access, staff parking, and some buildings for equipment storage and staff facilities. The Hospital Street wye would have additional utility beyond the turning of the passenger train by providing a westerly connection between the Buckingham Branch and the S-Line.

Several commenters on the Draft EIS raised concerns over property impacts from the new turning wye at Hospital Street and the overall impact of the rail system on cultural and historic resources within Shockoe Valley. DRPT's continuing analysis of the Hospital Street turning wye and Brown Street service yard configuration in response to comments received from stakeholders and the public have identified some concerns, including:

- The train movements necessary to turn and service the passenger train are not optimal. The southbound train would stop at Main Street Station for its last stop, then have to reverse northward on the S-Line, crossing the main tracks at AM Junction, then continue in reverse eastward onto the Buckingham Branch past the switch for the new Hospital Street Wye track before stopping. Once the switch to the wye track was lined, the train would then have to proceed forward onto the Hospital Street wye track, around the wye and northward onto the S-Line. Once the train had moved beyond the wye track switch, the train would stop again until the wye track switch was relined for the S-Line main track, after which the train would reverse southward on the S-Line, crossing all main tracks, and continue in reverse into the Brown Street Yard servicing facility. In the morning, the train would have to reverse from the Brown Street service yard down the main track to reach Main Street Station. These multiple reverse train movements have the potential to slow down or block other north-south train movements through this section of the corridor.
- Placing a new single-track wye at Hospital Street requires acquisition of property outside of existing CSXT right-of-way and would require relocation of a business that provides waste management services, including onsite bioremediation, physical and chemical liquids treatment, fuel recycling, and processing and disposal for a variety of industrial and environmental clean-up residuals.
- There are potential impacts to historic and cultural resources within Richmond's Shockoe Valley area. Shockoe Valley has an extensive history in Richmond's development, including areas used as a slave trading center (see Section 3.1.4 of this Final EIS for further discussion regarding Shockoe Valley historic and cultural resources).

In response to these concerns and comments, DRPT identified and evaluated additional options for a turning wye and service yard in the Richmond Area.

3.0 ADDITIONAL RICHMOND TURNING WYE AND SERVICE YARD OPTIONS

DRPT's goal in further evaluating possible Richmond area turning wye and service yard options was to identify a turning wye and service yard that met the DC2RVA Purpose and Need with more efficient train movements, less impacts to property outside the CSXT right-of-way, and a reduced rail footprint and potential impacts to cultural resources in Shockoe Valley.

DRPT identified the following additional turning wye and service yard combinations in the Richmond area for consideration (see Figure 2):

- Bellwood Wye and Service Yard
- Fulton Yard Wye/Brown Street Service Yard
- Laburnum Wye/Brown Street Service Yard
- Airport Wye #1/Brown Street Service Yard
- Airport Wye #2/Brown Street Service Yard
- Manchester Wye/South Service Yard
- Dunlop (Petersburg) Wye/Boulevard Service Yard
- Boulevard (Petersburg) Wye/Service Yard

DRPT evaluated the additional Richmond turning wye and service yard options for their train operation efficiency, potential to require property outside of existing CSXT right-of-way, and for their footprint within Shockoe Valley. The following describes the turning wye and service yard options, and DRPT's evaluations.

3.1 Bellwood Wye and Service Yard

CSXT's Bellwood Wye is 8.8 miles south of Main Street Station on the S-Line, between I-95 to the east and S.R. 301 and the U.S. Defense Supply Center to the west. The west side of the wye has a small freight support yard and the existing S-Line tracks. The east side of the wye is the beginning of the CSXT track leading to Hopewell, with existing wye tracks that direct trains coming from both from the north and the south off of the S-Line and onto the Hopewell track. The interior of the wye is largely undeveloped, with the exception of some small CSXT storage and equipment buildings adjacent to the existing yard. Access to the interior of the wye is through an at-grade crossing of the Hopewell track connecting to Shell Road. This option (see Figure 3) would use the existing wye tracks to turn the passenger trains and would add three tracks with platforms in the interior of the wye alongside the Hopewell track for overnight parking and servicing of the passenger train. The existing at-grade crossing would be relocated north, and a new turnaround added to Shell Road. The passenger train being serviced overnight would access the service yard by moving south on the S-Line from Main Street Station, proceeding just past the Bellwood Wye, reversing into the southern leg of the wye onto the Hopewell track, and then pulling north onto the northern leg of the wye and into the new service yard inside the existing wye. In the morning, the passenger train would pull north, departing the service yard and entering the S-Line to reach Main Street Station's west-side platforms.

DRPT determined that the Bellwood Wye and Service Yard would:

- Provide efficient train turning movements. The use of the existing wye allows the entire train to be turned without de-coupling the locomotive or making repetitive reverse movements or other moves on the main track.
- Minimize the need for property outside existing CSXT right-of-way. No additional property would be required.
- Minimize the rail footprint in Shockoe Valley. Both the turning wye and service yard are south of the James River, approximately nine miles from Shockoe Valley.

3.2 Fulton Yard Wye/Brown Street Service Yard

CSXT's Fulton Yard is two miles east of Main Street Station; the yard is curved and sits on a bluff above the James River. This option (see Figure 4) would add a wye at the base of the curved yard on the riverside. Due to limits on track length and curvature posed by existing track, to the existing topography adjacent to Fulton Yard, and to the proximity of an adjacent tank farm, the wye would be for turning locomotives only. Three yard tracks would be realigned in order to create room for the wye. Overnight parking and service for the passenger train would be provided at the Brown Street Yard as described above and in the Draft EIS. The passenger train would access the service yard by reversing from Main Street Station north on the S-Line to Brown Street Yard, where the locomotive would be uncoupled. The locomotive would then move south and east of Main Street Station to Fulton Yard, turn at the new wye, and proceed back past the east side of Main Street Station to the north end of Brown Street Yard where it would reverse onto the yard track to recouple with the passenger cars. In the morning, the passenger train would reverse south on the main track to Main Street Station.

DRPT determined that the Fulton Yard Wye/Brown Street Service Yard would:

- Not provide efficient train turning movements. A new wye in Fulton Yard could only turn locomotives, requiring de-coupling the locomotive at Brown Street Yard and making repetitive reverse movements and trips on the main track. In addition, the movements of the passenger locomotive between the wye and the service yard could be subject to delay, since the wye is located within an active freight yard where activities such as switching freight cars, assembling and uncoupling long freight trains, and attaching helper locomotives to trains operating northward through downtown Richmond toward Acca Yard occur routinely. These yard activities require significant yard and main track capacity. Turning the passenger locomotive within the yard would create inefficiencies both for the passenger operation and also the host freight railroad that owns the tracks. In addition, as only the locomotive would be turned, the passenger car seats would be facing the rear of the train when the passenger train left Main Street Station in the morning, a seating arrangement that is not preferred by Amtrak.
- Minimize the need for property outside existing CSXT right-of-way. No additional property would be required.
- Partially reduce the rail footprint in Shockoe Valley. The turning wye would be located outside of Shockoe Valley, however the service yard would remain on the edge of Shockoe Valley.

3.3 Laburnum Wye/Brown Street Service Yard

There is an industrial spur track extending north of the CSXT Peninsula subdivision main track; the spur track is 5.3 miles east of Main Street Station and just west of Laburnum Avenue. The spur track can only be accessed by westbound trains from the Peninsula subdivision. The spur track is bound by Cornelius Creek to the west and multiple industrial buildings/parcels with rail access. This option (see Figure 5) would add a new wye track on the west side of the spur track and extend the existing siding parallel to the main track, allowing access by eastbound trains and a complete turning movement. The Laburnum Wye would be used for turning the locomotive only. Overnight parking and service for the passenger train would be provided at the Brown Street Yard as described in the above scenario for use of the Fulton Wye alternative. The passenger train would access the service yard by reversing from Main Street Station north on the main track to Brown Street Yard, where the locomotive would be uncoupled. The locomotive would then move south and east of Main Street Station through Fulton Yard, turn at the new Laburnum Wye, and proceed back through Fulton Yard, past the east side of Main Street Station to the north end of Brown Street Yard to recouple with the passenger cars. In the morning, the passenger train would reverse south on the main track to Main Street Station.

DRPT determined that the Laburnum Wye/Brown Street Service Yard would:

- Not provide efficient train turning movements. A new wye at Laburnum Street could only turn locomotives, requiring de-coupling the locomotive at Brown Street Yard and making repetitive reverse movements and trips on the main track and through Fulton Yard. As a result, this option would create inefficiencies both for the passenger operation and also the host freight railroad that owns the tracks. As only the locomotive would be turned, the passenger car seats would be facing the rear of the train when the passenger train left Main Street Station in the morning, a seating arrangement that is not preferred by Amtrak.
- Somewhat reduce the need for property outside existing CSXT right-of-way. Additional property would be required for the new wye track, however no business relocations would be required.
- Reduce the rail footprint in Shockoe Valley. The turning wye would be located outside of Shockoe Valley; however, the service yard would remain on the edge of Shockoe Valley.

3.4 Airport Wye #1/Brown Street Service Yard

There is an industrial spur extending north of the CSXT Peninsula subdivision main track; the spur track is 6.1 miles east of Main Street Station and just west of Airport Drive. The spur track can only be accessed by east-bound trains from the Peninsula subdivision. This track is bounded by Airport Drive on the east and multiple industrial buildings/parcels with rail access. This option (see Figure 6) would add a new wye track to the east, shift the existing spur track, and extend the existing siding parallel to the main track, allowing access by west-bound trains and a complete turning movement. The new east arm of the wye would require a new road overpass structure at Airport Drive. The Airport Wye #1 would be used for turning the locomotive only. Overnight parking and service for the passenger train would be provided at the Brown Street Yard as described above. The passenger train would access the service yard by reversing from Main Street Station north on the main track to Brown Street Yard, where the locomotive would be uncoupled. The locomotive would then move south and east of Main Street Station through Fulton Yard, turn at the new Airport Wye #1, and proceed back through Fulton Yard, past the east side of Main Street Station to the north end of Brown Street Yard to recouple with the passenger cars. In the morning, the passenger train would reverse south on the main track to Main Street Station.

DRPT determined that the Airport Wye #1/Brown Street Service Yard would:

- Not provide efficient train turning movements. A new wye at Airport Drive could only turn locomotives, requiring de-coupling the locomotive at Brown Street Yard and making repetitive reverse movements and trips on the main track and through Fulton Yard. As a result, this option would create inefficiencies both for the passenger operation and also the host freight railroad that owns the tracks. As only the locomotive would be turned, the passenger car seats would be facing the rear of the train when the passenger train left Main Street Station in the morning, a seating arrangement that is not preferred by Amtrak.

- Somewhat reduce the need for property outside existing CSXT right-of-way. Additional property would be required for the new wye track, however no business relocations would be required.
- Require a new road over rail structure where the turning wye track would cross Airport Drive.
- Reduce the rail footprint in Shockoe Valley. The turning wye would be located outside of Shockoe Valley, however the service yard would remain on the edge of Shockoe Valley.

3.5 Airport Wye #2/Brown Street Service Yard

There is an industrial spur extending north of the CSXT Peninsula subdivision main track; the spur track is 6.1 miles east of Main Street Station and just west of Airport Drive. The spur track can only be accessed by east-bound trains from the Peninsula subdivision. This track is bounded by Airport Drive on the east and multiple industrial buildings/parcels with rail access. North of Charles City Road, the spur track splits into two separate tracks extending north in the shape of a "Y". This option (see Figure 7) would add a new wye track just north of Nandun Road, connecting the arms of the "Y" and allowing a complete turning movement. The new east arm of the wye would require a new road overpass structure at Lewis Road, or closure of Lewis Road where the new wye track would cross the road. The Airport Wye #2 would be used for turning the locomotive only. Overnight parking and service for the passenger train would be provided at the Brown Street Yard as described above. The passenger train would access the service yard by reversing from Main Street Station north on the main track to Brown Street Yard, where the locomotive would be uncoupled. The locomotive would then move south and east of Main Street Station through Fulton Yard, turn at the new Airport Wye, and proceed back through Fulton Yard, past the east side of Main Street Station to the north end of Brown Street Yard to recouple with the passenger cars. In the morning, the passenger train would reverse south on the main track to Main Street Station.

DRPT determined that the Airport Wye #2/Brown Street Service Yard would:

- Not provide efficient train turning movements. A new wye just north of Nandun Road could only turn locomotives, requiring de-coupling the locomotive at Brown Street Yard and making repetitive reverse movements and trips on the main track and through Fulton Yard. As a result, this option would create inefficiencies both for the passenger operation and also the host freight railroad that owns the tracks. As only the locomotive would be turned, the passenger car seats would be facing the rear of the train when the passenger train left Main Street Station in the morning, a seating arrangement that is not preferred by Amtrak.
- Reduce the need for property outside existing CSXT right-of-way. Additional property would be required for the new wye track, however no business relocations would be required.

- Reduce the rail footprint in Shockoe Valley. The turning wye would be located outside of Shockoe Valley, however the service yard would remain on the edge of Shockoe Valley.

3.6 Manchester Wye/South Service Yard

Just south of the James River, the CSXT S-Line crosses an NS spur line servicing the City's wastewater treatment facility east of the rail corridor. There is an existing connection in the southwest quadrant of the CSXT/NS crossing, connecting the westernmost CSXT main track with an NS spur line. CSXT's South Yard is another 1.7 miles south of this rail crossing. This option would add a turning wye track in the southeast quadrant of the CSXT/NS crossing, connecting the proposed east main track of the S-Line with the NS spur heading east (see Figure 8). This option would add three tracks with platforms for passenger train servicing and storage west of and adjacent to CSXT's South Yard. The evening southbound train would exit Main Street Station and proceed past the CSXT/NS crossing. The train would then reverse north on the existing westerly wye connection to the NS line, pull forward on the NS line across the S-Line tracks, and then reverse on the new easterly wye connection onto the S-Line south crossing all three main tracks to access the passenger train service tracks at the South Yard. In the morning, the passenger train would pull north along the S-Line to Main Street Station.

DRPT determined that the Manchester Wye/South Service Yard would:

- Not provide efficient train turning movements. A new wye at Manchester would require making repetitive reverse movements and trips on the main track and require crossing the S-Line using an at-grade diamond crossing on the NS track, blocking the S-Line during the crossing. As a result, this option would create inefficiencies both for the passenger operation and also CSXT freight operations.
- Not reduce the need for property outside existing CSXT right-of-way. Additional property would be required for the new wye track. The proximity of the wye connection to the S-Line would require relocation of one or more of the above-ground petroleum storage tanks.
- Minimize the rail footprint in Shockoe Valley. Both the turning wye and the service yard would be located outside of Shockoe Valley.

3.7 Dunlop (Petersburg) Wye/Service Yard

A wye was once located 25 miles south of Main Street Station on the CSXT A-Line main freight and passenger line, where East Ellerslie Avenue crosses the rail corridor. The eastern wye track, which led to Petersburg's Union Station, and the southern connector wye track no longer exist. Commercial development has occurred within the space previously enclosed by the wye along East Ellerslie Avenue. This option would reconstruct the wye track on the east to provide a sufficient length to turn a locomotive and construct a new wye track connection to the south at a slightly different curvature from the historic track placement (see Figure 9). The wye track would require reconstruction of an at-grade crossing on East Ellerslie Avenue, or alternatively, a new grade separated crossing. A service yard would be built on the east side of the main A-Line track approximately one-half mile south of the wye (see Boulevard Wye/Service Yard below). This option could support an additional stop at Petersburg, providing the proposed Petersburg

Boulevard Station[1] with an early am departure north as well. FRA's preferred alternative location for a new Petersburg Station is between the Dunlop Wye and the conceptual Boulevard Service Yard, just south of the Boulevard (US Route 1) crossing of the A-Line. The evening southbound train would leave Main Street Station, proceed south on the S-Line to Centralia, then on CSXT's A-Line to the Petersburg Boulevard Station, and then continue to the Boulevard Service yard. At the service yard, the locomotive would decouple from the passenger cars, then reverse the half-mile to the Dunlop Wye, turn around, and reverse back to the service yard. In the morning, the train would first stop at the Petersburg Boulevard Station, and then proceed to Main Street Station.

DRPT determined that the Dunlop (Petersburg) Wye/Service Yard would:

- Not provide efficient train turning movements unless service is being provided to the proposed new Petersburg Boulevard Station. A new wye at Ellerslie Avenue could only turn locomotives, requiring de-coupling the locomotive at the new Boulevard Service Yard and making two reverse movements and trips on the main track past the new Petersburg Station to/from the wye. These movements not only create inefficiencies for passenger trains, but inefficiencies for freight operations on the CSXT A-Line, including trains destined to and from the Port of Virginia, since the wye would not have a direct connection to the servicing facility, requiring the passenger locomotive to use the mainline tracks of the A-Line. As only the locomotive would be turned, the passenger car seats would be facing the rear of the train when the passenger train left Main Street Station in the morning, a seating arrangement that is not preferred by Amtrak. The distance from Main Street Station also makes this an inefficient location to turn/service the passenger train unless a stop at the new Petersburg Boulevard Station is included.
- Not reduce the need for property outside existing CSXT right-of-way. Additional property would be required for the new wye track and service yard, however no business relocations would be required.
- The new wye track would require a restoration of a prior grade crossing of Ellerslie Avenue; a grade separated road overpass may be required if the at-grade crossing cannot be restored.
- Minimize the rail footprint in Shockoe Valley. Both the turning wye and the service yard would be located outside of Shockoe Valley.

3.8 Boulevard (Petersburg) Wye/Service Yard

The Boulevard Wye and Service Yard would be developed approximately one-half mile south of the Dunlop Wye, just beyond FRA's preferred alternative location for a new Petersburg Station. This option would include a new wye and service yard (see Figure 10). The service yard would have a siding track and two service tracks. The Boulevard Wye would be capable of turning the entire train. This option could support an additional stop at Petersburg, providing the Petersburg Station with an early morning departure northbound. The southbound train would leave Main

---

[1] FRA is currently conducting a study to determine a new passenger station location to serve the Petersburg Area, and has released a draft of an Environmental Assessment (EA) of four possible locations for a new multimodal station for current intercity passenger rail service through Petersburg. FRA's preferred alternative identified in the Draft EA is a site on the Boulevard in Colonial Heights, however no final decisions have been made.

Street Station, proceed south to the Petersburg station, and then continue onto the east leg of the Boulevard Wye, reverse into the wye to turn the train, and then pull into the Boulevard Service yard. In the morning, the train would first stop at the Petersburg Station, and then proceed to Main Street Station.

DRPT determined that the Boulevard (Petersburg) Wye/Service Yard would:

- Not provide efficient train turning movements unless service is being provided to the proposed new Petersburg Boulevard Station. A new wye at Boulevard could be configured to turn either locomotives or passenger trains. The distance from Main Street Station makes this an inefficient location to turn/service the passenger train unless a stop at the new Petersburg Boulevard Station is included.
- Not reduce the need for property outside existing CSXT right-of-way. Additional property would be required for the new wye track and service yard, however no business relocations would be required.
- Minimize the rail footprint in Shockoe Valley. Both the turning wye and the service yard would be located outside of Shockoe Valley.

4.0 FINDINGS

DRPT evaluated eight additional turning wye and service yard combinations in comparison to the proposed Hospital Street Wye and Brown Street Service Yard combination recommended in the Draft EIS for the Richmond Area Build Alternative 6F – Full Service – Staples Mill Road/Main Street Stations. DRPT determined that the Bellwood Wye and Service Yard option best meets the DC2RVA Purpose and Need with improved train operations efficiency, minimizes property impacts outside of existing CSXT right-of-way, and minimizes the DC2RVA project footprint within Shockoe Valley. Therefore, DRPT has relocated the Richmond area turning wye and passenger train service yard to CSXT's existing Bellwood Wye, south of the James River.

APPENDIX K

SECTION 106
DRAFT MEMORANDUM OF AGREEMENT

D.C. TO RICHMOND SOUTHEAST HIGH SPEED RAIL

K SECTION 106 DRAFT MEMORANDUM OF AGREEMENT

Due to several levels of federal involvement, the DC2RVA Project requires compliance with the Section 106 National Historic Preservation Act of 1966 (NHPA), as amended (54 U.S.C. 306108), and its implementing regulations (36 CFR Part 800). This process requires federal agencies to take into account their effects on historic properties (defined as any resource that is eligible for or listed in the National Register of Historic Places). After extensive identification and evaluation studies within the Project's area of potential effects (APE), it was found that there are 120 historic properties in the Project APE. Chapter 5 and Appendix D of the Final EIS provides details on this Section 106 process. In accordance with 36 CFR 800.5(a), the Federal Railroad Administration (FRA) applied the criteria of adverse effect to these 120 historic properties.

The regulations implementing Section 106 define an effect as an "alteration to the characteristics of a historic property qualifying it for inclusion in or eligible for the National Register".[1] The effect is adverse when the alteration of a qualifying characteristic occurs in a "manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association".[2] Through their effect analysis, FRA determined that the Project will have an adverse effect on 21 resources, no adverse effect on 69 resources, and no effect on the remaining 30 resources. The Virginia Department of Historic Resources (DHR, the State Historic Preservation Office [SHPO]) has concurred with these determinations. Detailed information on SHPO consultation is provided in Appendix E of the Final EIS.

Per 36 CFR 800.6, FRA and the Virginia Department of Rail and Public Transportation (DRPT) have crafted a Section 106 Memorandum of Agreement (MOA) to outline stipulations that will be taken to mitigate the adverse effects to the 21 historic properties. The Section 106 MOA has been developed based on feedback from consulting parties, property owners, and involved agencies and includes a roster of tasks to be completed on all adversely affected resources, such as public interpretation, additional research, National Register documentation, archaeological data recovery, and more, to mitigate any adverse effects caused by the undertaking.

The Section 106 MOA enclosed here is a draft. This document has been extensively reviewed by the four signatories (FRA, DHR, DRPT, and the Advisory Council on Historic Preservation). A final, signed MOA will be part of the Record of Decision for the Project. Acquiring a signed MOA is the final step in the Section 106 process.

---

[1] 36 CFR 800.16(i)

[2] 36 CFR 800.5(a)

DRAFT/MEMORANDUM OF AGREEMENT AMONG THE VIRGINIA HISTORIC PRESERVATION OFFICE, THE FEDERAL RAILROAD ADMINISTRATION, ADVISORY COUNCIL OF HISTORIC PRESERVATION, AND THE VIRGINIA DEPARTMENT OF RAIL AND PUBLIC TRANSPORTATION REGARDING THE WASHINGTON, D.C. TO RICHMOND, VIRGINIA SOUTHEAST HIGH SPEED RAIL PROJECT

WHEREAS, the Federal Railroad Administration (FRA) and the Federal Highway Administration, in cooperation with North Carolina Department of Transportation and Virginia Department of Rail and Public Transportation (DRPT), completed a Tier I Final Environmental Impact Statement and Record of Decision in accordance with the National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 *et seq.*) in July and October 2002, respectively, for the proposed Southeast High Speed Rail corridor from Washington, D.C. to Charlotte, North Carolina, (SEHSR Project), which determined the preferred corridor for detailed analysis in Tier II environmental studies for individual portions of the larger corridor; and

WHEREAS, a Programmatic Agreement developed pursuant to 36 C.F.R. § 800.14(b) among FRA, the Virginia State Historic Preservation Office (Virginia SHPO), North Carolina State Historic Preservation Office, DRPT, the North Carolina Department of Transportation, Rail Division, and the Advisory Council on Historic Preservation (ACHP) was signed on April 12, 2016 for the SEHSR Project (the SEHSR PA); and

WHEREAS, Stipulation VIII of the SEHSR PA requires that FRA, in consultation with the Virginia SHPO, DRPT, and ACHP, if participating, develop a Memorandum of Agreement (MOA) should a project have an adverse effects on historic properties; and

WHEREAS, FRA, Virginia SHPO, DRPT, and ACHP, if participating, are Signatories to this MOA to assure that ensuing stipulations are met; and

WHEREAS, DRPT proposes to construct a 123-mile portion of the SEHSR Project that involves construction of infrastructure improvements to support increased frequency and higher-speed intercity passenger rail service in the travel corridor between Washington, D.C. and Richmond/Centralia, Virginia (DC2RVA), such as constructing additional main line tracks and track crossovers, straightening curves in existing tracks, improving intercity passenger stations and station areas, improving sidings and signals, and implementing roadway crossing safety improvements, within a long-established surface transportation corridor (Project); and

WHEREAS, FRA anticipates receiving a future request from DRPT to provide federal financial assistance to construct the Project, including activities such as design, property acquisition, and demolition, though funding sources have not yet been determined, and it is expected that there will be a combination of federal, state and local funding that may be allocated in phases; and

WHEREAS, if FRA provides federal financial assistance to construct the Project, the Project would constitute an undertaking under Section 106 of the National Historic Preservation Act (NHPA) as amended (54 U.S.C. § 306108) (Section 106); and

WHEREAS, the NHPA and the SEHSR PA require FRA, as the lead federal agency for the Project, to take into account the effects of its undertakings on properties included in or eligible for inclusion in the National Register of Historic Places (NRHP), including consultation with other parties, and to provide ACHP a reasonable opportunity to comment prior to commencement of work on the Project; and

WHEREAS, FRA is the Project's lead federal agency for Tier II environmental study under the NEPA and pursuant to the NEPA, FRA prepared and published a Draft Environmental Impact Statement (Draft EIS) in September 2017, and a Final Environmental Impact Statement (Final EIS) in summer 2019 for the Project, which is being coordinated with the Section 106 process pursuant to 36 CFR 800.8(a); and

WHEREAS, pursuant to 36 C.F.R. § 800.2(c)(4), FRA has requested DRPT participate in consultation and, by letter dated December 11, 2014, has authorized DRPT to initiate consultation with the Virginia ; and

WHEREAS, pursuant to 36 C.F.R. § 800.6(c)(2)(iii), FRA has consulted with DRPT and has invited them to sign this MOA as an Invited Signatory to this MOA; and

WHEREAS, pursuant to 36 C.F.R.§ 800.2(c), FRA identified Native American tribes, local governments and other groups with a vested interest in the prehistory and history of the project area (Consulting Parties) to potentially participate in the process; and

WHEREAS, pursuant to 36 C.F.R.§ 800.2(c)(2), FRA invited the Pamunkey Indian Tribe, Chickahominy Indian Tribe, Eastern Chickahominy Indian Tribe, Upper Mattaponi Indian Tribe, Rappahannock Indian Tribe, Nansemond Indian Tribe, Monacan Indian Tribe, and Catawba Indian Nation participate in consultation in letters sent in July 2015 and February 2018; and

WHEREAS, on February 23, 2018, the Upper Mattaponi Indian Tribe accepted FRA's invitation; and

WHEREAS, the remaining tribes did not respond to the invitation, but FRA is assuming that the Virginia-based tribes (Pamunkey Indian Tribe, Chickahominy Indian Tribe, Eastern Chickahominy Indian Tribe, Rappahannock Indian Tribe, Nansemond Indian Tribe, and Monacan Indian Tribe) are Consulting Parties and are treating them as such; and

WHEREAS, pursuant to 36 C.F.R. § 800.2(c)(3), FRA, invited the following local governments to be Consulting Parties between January 2015 and July 2018, and they have elected to participate: Arlington County, Caroline County, City of Alexandria, City of Fredericksburg, City of Richmond, Hanover County, Prince William County, and Town of Ashland; and

WHEREAS, pursuant to 36 C.F.R. § 800.2(c)(3), FRA, invited the following local governments to be Consulting Parties between January 2015 and July 2018, and each group either elected to not participate or did not reply to the invitation: Fairfax County, Henrico County, Spotsylvania County, and Stafford County; and

WHEREAS, pursuant to 36 C.F.R. § 800.2(c)(5), FRA, invited the following groups to be consulting parties between January 2015 and February 2019, and they have elected to participate: Alexandria Archaeology, American Battlefield Protection Program (ABPP), Ashland Museum, Central Virginia Battlefields Trust (CVBT), Civil War/Battlefield Preservation Trust (CWT), Historic Fredericksburg Foundation, Inc. (HFFI), Historic Richmond Foundation, Marine Corps Base Quantico, National Park Service (NPS)- Northeast Regional Office, NPS- Captain John Smith Chesapeake National Historical Trail, NPS- Fredericksburg Division (which includes the Fredericksburg & Spotsylvania National Military Park), NPS- George Washington Memorial Parkway, NPS- National Capital Region, NPS- Potomac Heritage National Scenic Trail, NPS- Richmond Division, NPS- Washington-Rochambeau National Historical Trail, National Trust for Historic Preservation (NTHP), and Preservation Virginia; and

WHEREAS, pursuant to 36 C.F.R. § 800.2(c)(5), FRA invited the following groups to be Consulting Parties to the Project on January 6, 2015 and they declined to participate or did not reply to the invitations: ACL & SAL Railroad Historical Society, Arlington Historical Society, Caroline Historical Society, Center for Neighborhood Revitalization, Chesterfield Historical Society, Hanover County Historical Society, Inc., Henrico County Historical Society, Historic Alexandria Foundation, Historic Prince William, Inc., Historical Society of Fairfax County, Virginia, Inc., and Stafford County Historical Society; and

WHEREAS, pursuant to 36 C.F.R. § 800.4(a)(1) and as defined in 36 C.F.R.§ 800.16(d), FRA in consultation with the Virginia SHPO determined that the direct Area of Potential Effects (APE) for this Project is the entire area of ground disturbing activities and staging areas for rail and road modifications (project limits of disturbance), to include construction, along the 123-mile corridor and the Virginia SHPO concurred in a letter dated February 2, 2015; and

WHEREAS, pursuant to 36 C.F.R. § 800.4(a)(1) and as defined in 36 C.F.R. § 800.16(d), FRA, in consultation with the Virginia SHPO, determined that the indirect APE is the entire area of ground-disturbing activities and staging areas plus any areas within the viewshed of the corridor where indirect affects to a resource’s setting and feeling could occur, typically comprising a 500-foot wide corridor along all sides of the limits of disturbance, 1,000 feet near proposed overpasses, one (1) city block in urban areas, and additional areas as warranted due to viewsheds and vistas; and

WHEREAS, pursuant to 36 C.F.R. § 800.4(b) and Stipulation VI of the SEHSR PA, DRPT conducted identification and evaluation-level architectural and archaeological investigations of the entire APE between 2015 and 2018, and the results of the cultural resource investigations have been coordinated with the Virginia SHPO and other Consulting Parties (see Appendix A for a full list); and

WHEREAS, a total of 120 historic properties listed in, eligible for, or assumed eligible for the NRHP have been identified within the Project APE, and FRA determined, in consultation with the Virginia SHPO and the other Consulting Parties, that the Project will have an adverse effect on twenty-one (21) of these historic properties (listed north to south; see Table 1 and Appendix B for additional details and mapping): Richmond, Fredericksburg, and Potomac Railroad (RF&P) (Virginia Department of Historic Resources [DHR] Inventory No. 500-0001), RF&P Bridge over Occoquan River (DHR Inventory No. 500-0001-0022), Rippon Lodge (DHR Inventory No. 076-0023), Civil War Campsite (Site 44ST1223), Rappahannock River Railroad Bridge and Associated Structures/Platform (DHR Inventory No. 111-0132-0025), Bridge/Marye's Mill (Site 44SP0187), Fredericksburg Historic District (DHR Inventory No. 111-0132), Block 49/Train Station (Site 44SP0688), Block 48/Train Station (Site 44SP0687), Earthwork/ Jackson's Earthwork (Site 44SP0468), Doswell Historic District (DHR Inventory No. 042-5448), Doswell Depot and Tower (DHR Inventory No. 042-0093), Berkleytown Historic District (DHR Inventory No. 166-5073), Laurel Industrial School Historic District (DHR Inventory No. 043-0292), Main Building/Robert Stiles Building (DHR Inventory No. 043-0292-0001), Shockoe Valley & Tobacco Row Historic District (DHR Inventory No. 127-0344), Main Street Station Parking Lot/Railroad (Site 44HE1098), Railroad , Warehouse (Site 44HE1097), Main Street Station and Trainshed (DHR Inventory No. 127-0172), Seaboard Air Line Railroad Corridor (DHR Inventory No. 127-6271), and Warehouse (Site 44HE1094); and

WHEREAS, FRA, in consultation with the Virginia SHPO and the other Consulting Parties, developed this MOA in accordance with Stipulation VIII of the SEHSR PA in order to address the Project's adverse effects on historic properties; and

WHEREAS, in accordance with 36 C.F.R. § 800.6(a)(1), FRA notified the ACHP of its adverse effect determination on June 20, 2018, and the ACHP has chosen to participate in the consultation pursuant to 36 CFR § 800.6(a)(1)(iii) and the SEHSR PA; and

WHEREAS, the list of historic properties, project effects, and mitigation strategies included in this MOA formulated by FRA, DRPT, ACHP, and the Virginia SHPO, have been disseminated to the Consulting Parties by DRPT through numerous emails, letters, and in-person meetings held by DRPT in Richmond, Fredericksburg, and Washington, D.C., as well as through dissemination of hard copies of the draft MOA on December 28, 2018 (see Appendix C for a list of correspondence); and

WHEREAS, pursuant to 36 C.F.R. § 800.2(d), FRA invited public input on the Project and history-related studies through public information meetings at numerous venues held in

November 2014, June 2015, December 2015, October 2017, and October 2018, and through numerous in-person meetings and emails with individual property owners and other interested parties; and

WHEREAS, FRA and DRPT have shared with the public information about the overall Project, including its effects on historic properties, multiple times via the NEPA process as outlined in the Final EIS.

NOW, THEREFORE, FRA, DRPT, the Virginia SHPO, and the ACHP (collectively referred to as the Signatories) agree that the Project shall be implemented in accordance with the following stipulations in order to take into account the effect of the undertaking on historic properties.

STIPULATIONS

FRA, in coordination with DRPT, shall ensure that the following stipulations are carried out:

I. APPLICABILITY

A. This MOA is binding on FRA only if FRA provides financial assistance for the construction of the Project.

B. Notwithstanding Stipulation I.A., this MOA applies to all of DRPT's activities necessary to advance the Project toward and/or through construction due to the involvement of federal permits which necessitate compliance with Section 106 of the National Historic Preservation Act, including, but not limited to, further design, acquisition of property for the Project, demolition of acquired properties, and construction that are funded with any amount of financial assistance from FRA or non-federal funds.

C. Nothing herein shall be interpreted as agreement by DRPT that Section 106 applies to other projects with independent utility that use exclusively non-federal funds.

II. MITIGATION MEASURES FOR ADVERSELY AFFECTED HISTORIC PROPERTIES (listed north to south)

A. RF&P Railroad (DHR Inventory No. 500-0001)

1. Within one (1) year of the receipt of funding for the Project as described under Stipulation V(C), DRPT shall document, or cause to be documented through the engagement of a qualified consultant, all bridges to be removed as a result of the Project and are contributing elements to the RF&P. DRPT shall prepare, or cause to be prepared, photographic documentation of each structure consistent with guidance found in "Photographic Documentation for National Park Service

Basic Survey" and DHR's "Photographic Documentation for Virginia Department of Historic Resources (DHR) Survey" (Updated 2016); and complete a Virginia SHPO Intensive Level Survey form for each structure in the Virginia SHPO's Virginia-Cultural Resource Information System (VCRIS). DRPT shall also ensure that each structure is documented in a written report. The report shall address, at a minimum, the physical description and historical context of each structure. DRPT shall submit the photographs, VCRIS form, and report concurrently to FRA, Virginia SHPO, property owner, and other Consulting Parties, as appropriate, for review and comment, as described under Stipulation IV(B) and (C). DRPT shall disseminate final copies to FRA, Virginia SHPO, property owner, and the Virginia Museum of History & Culture, for their collections, and to the other Consulting Parties upon written request. Final VCRIS forms and associated packets shall be given to the Virginia SHPO at this time for their archives.

2. Within one (1) year of the receipt of funding for Project construction, as described under Stipulation V(C), DRPT shall complete, or cause to be completed through the engagement of a qualified consultant, two (2) oral histories of past and present RF&P and/or CSX Transportation (CSX-T) employees who have extended tenures with the resource and particularly historic structures along the corridor, if such individuals are available. Interviews shall be taped, and transcriptions of the interviews shall be submitted to the Virginia SHPO, the Library of Virginia, the Virginia Museum of History & Culture, HFFI, and the Richmond History Center for their collections, and the other Consulting Parties upon written request.

3. Within four (4) years of receipt of Project construction funding as described in Stipulation V(C), DRPT shall create, or cause to be created through the engagement of a qualified consultant, a web-based "story map" highlighting the 120 historic properties located within the Project APE. The story map shall include photographs, narratives, and mapping details of all resources (as appropriate to comply with the Archeological Resources Protection Act of 1979) digitally tied to an overall GIS-based map of the project corridor. Draft materials for the story map shall be submitted concurrently to FRA, Virginia SHPO, and other Consulting Parties for review and comment, as appropriate, as described under Stipulation IV(B) and (C). The hosting location for the story map shall also be discussed at this time and may include one of the consulting parties or another historically focused webpage. DRPT shall finalize the story map and notify FRA, Virginia SHPO, and the other Consulting Parties when the webpage goes live.

B. RF&P Bridge over Occoquan River (DHR Inventory No. 500-0001-0022)

1. Draft designs for the new bridge over the Occoquan River shall be compatible with the architectural and historic character of the existing structure and nearby historic properties. DRPT shall submit draft design plans for the new bridge at

the schematic, 30%, 65%, and 90% stages concurrently to FRA, Virginia SHPO, property owner, and other Consulting Parties, as appropriate, for review and comment, as described under Stipulation IV(B) and (C). The design packet shall include a set of bridge plans and elevations, as well as a schematic showing the proposed bridge design in relation to the existing Bridge over Occoquan River to show proposed visual modifications.

2. Within one (1) year of the receipt of funding for Project construction in this segment as described under Stipulation V(C), DRPT shall produce, or cause to be produced through the engagement of a qualified consultant, measured drawings of the existing RF&P Bridge over the Occoquan River prior to any alterations. The drawings shall conform to the guidelines specified by the NPS as set forth in Historic American Buildings Survey/Historic American Engineering Record (HABS/HAER) Guidelines (http://www.cr.nps.gov/hdp/standards/haerguidelines.htm).

3. Within one (1) year of the receipt of funding for Project construction in this segment as described under Stipulation V(C) and concurrent with the measured drawings, DRPT shall engage a professional photographer with experience in preparing large-format, black-and-white, archival-quality photographic documentation for HAER and HAER-type documentation projects to complete large-format photographs of the existing RF&P Bridge over Occoquan River. Photographs shall comply with HABS/HAER Photographs Specifications and Guidelines (http://www.cr.nps.gov/hdp/standards/HABS/photospecs.pdf) and DHR’s “Photographic Documentation for Virginia Department of Historic Resources Survey (Updated 2016). Negatives and print sizes shall be 4” x 5”. Negatives and prints shall be processed, labeled, and packaged according to HABS/HAER archival standards. A list of photo captions (index to photos) and a site plan of the building showing the location and direction of the photographs (key to photos) shall be included.

   Photographic views shall show the bridge and associated railway, as well as the surrounding landscape. Overview and detail photos of the bridge shall be provided, documenting as much as possible of the engineering and construction methods for the property including exterior elevations and detailed views of significant architectural or historical features.

4. Within six (6) months of the completion of the measured drawings and large-format photography, DRPT shall prepare or cause to be prepared through the engagement of a qualified consultant, a first draft HAER Outline Format report documenting the bridge. The report shall include any archival research collated on the history of the bridge as it relates to the RF&P, a physical description of the bridge, copies of the measured drawings and large-format photographs collected as part of II.B.2 and II.B.3 above, and any additional data gathered during this process. The draft shall be submitted concurrently to FRA, Virginia SHPO, and other Consulting Parties, as appropriate, for review and comment,

as described under Stipulation IV(B) and (C). DRPT shall submit final documents to FRA, the Virginia SHPO, the Library of Virginia, the Virginia Museum of History & Culture, the Fairfax County Historical Society, the Prince William Historic Society, and to the other Consulting Parties upon written request.

C. Rippon Lodge (DHR Inventory No. 076-0023)

1. The adverse effect on Rippon Lodge is caused by the installation of a new railroad bridge across Neabsco Creek. As such, draft designs for the new Neabsco Creek Bridge shall be compatible with the architectural and historic character of the existing structure and nearby historic properties. DRPT shall submit draft design plans for the new bridge at the schematic, 30%, 65%, and 90% stages concurrently to FRA, Virginia SHPO, Prince William County Department of Planning as property owner, and other Consulting Parties, as appropriate, for review and comment, as described under Stipulation IV(B) and (C). The design packet shall include a set of bridge plans and elevations, as well as a schematic showing the proposed bridge design in relation to the existing Neabsco Creek Bridge to show proposed visual modifications.

2. Prior to beginning construction and within one (1) year of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), DRPT shall create, or cause to be created through the engagement of a qualified consultant, a cultural landscape study of the Neabsco Creek watershed between Rippon Lodge and the Neabsco Creek Bridge. The study shall follow the Secretary of the Interior's Standards for conducting historic landscape studies as well as applicable guidance found in NPS Bulletin #18, *How to Evaluate and Nominate Designed Historic Landscapes* and other appropriate publications and guidance documents. The landscape study shall include, at a minimum, completing archival research on this segment of Neabsco Creek focusing on historic images and maps of this corridor and gathering spatial data on the current parameters of the waterway in this area. The data shall be used to create a contextual narrative on the evolution of the waterway over time inclusive of GIS overlays and photodocumentation. The ensuing cultural landscape report shall be submitted concurrently to FRA, Virginia SHPO, Prince William County, and other Consulting Parties, as appropriate, for review and comment, as described under Stipulation IV(B) and (C). DRPT shall disseminate final copies to FRA, Virginia SHPO, and Prince William County Planning Office for their collections, and to the other Consulting Parties upon written request.

3. Within one (1) year of the completion of the cultural landscape study, DRPT shall fund the fabrication and installation of an interpretive sign near the Rippon Lodge/Neabsco Creek vista as part of Prince William County's signage initiative program to disseminate information about the historical viewshed to the general public. In consultation with FRA, Virginia SHPO, Prince William County, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be

prepared through the engagement of a qualified consultant, draft text and layout for the interpretive sign. The draft text and layout shall be submitted to FRA, Virginia SHPO, and other Consulting Parties, as appropriate, for review and comment, and Prince William County Planning Department for review and approval, as described under Stipulation IV(B) and (C). If the interpretive sign text and layout are approved by William County, DRPT shall produce the interpretive sign and install the panel in a location deemed suitable after consultation with FRA, Virginia SHPO, Prince William County, and other Consulting Parties, as appropriate. Prince William County is under no obligation to approve the signage. If the Prince William County Planning Department does not approve the signage to be a part of their marker and signage program, DRPT shall consult with FRA, Virginia SHPO, Prince William County, and other Consulting Parties, as appropriate, to determine an appropriate method to interpret the historic viewshed to the public.

4. Within one (1) year of the completion of the cultural landscape study, DRPT shall engage a qualified consultant to restore the viewshed between Rippon Lodge and the Neabsco Creek rail bridge through the removal of underbrush as depicted in Appendix D. Mature trees shall be left extant. DRPT shall consult with FRA, Virginia SHPO, Prince William County Planning Department, and other Consulting Parties, as appropriate, on plans associated with the vegetative removal. Prince William County is under no obligation to approve the vegetative clearing. If the Prince William County Planning Department does not approve the vegetative clearing, DRPT shall consult with FRA, Virginia SHPO and other Consulting Parties, as appropriate, to determine an appropriate method to restore the historic viewshed.

D. Civil War Campsite (Site 44ST1223)

1. DRPT shall avoid Site 44ST1223 to the greatest extent possible. For the portions of the archaeological site that cannot be avoided, prior to ground disturbing activities and within two (2) years of receipt of Project construction funding in this segment as described under Stipulation V(C), DRPT shall conduct an intensive pedestrian survey with mapping of all visible surface features and GIS map overlays followed by Phase III archaeological data recovery in areas with the potential for intact subsurface remains. The archaeological work shall include the following components:

   a. DRPT shall develop a draft data recovery plan for the investigations and submit the plan concurrently to FRA, Virginia SHPO, property owner, NPS-Fredericksburg Division, ABPP, CWT and Consulting Parties, as appropriate, for review and comment, as described under Stipulation IV(B) and (C). The plan shall be consistent with the Secretary of the Interior's *Standards and Guidelines for Archaeological Documentation* (48 Fed. Reg. 44734–37, September 29, 1983) and take into account ACHP's publication, *Treatment of Archaeological Properties* (1980). The plan shall include:

    1) The property, properties, or portions of properties where site-specific data recovery plans shall be carried out;

    2) Any property, properties, or portions of properties that will be destroyed or altered without data recovery;

    3) The research questions to be addressed through data recovery, with an explanation of their relevance and importance;

    4) The methods to be used with an explanation of their relevance to the research questions;

    5) The methods to be used in analysis, data management, and dissemination of data, including a schedule;

    6) The proposed disposition of recovered materials and records;

    7) Proposed methods of disseminating the results of the work to interested individuals and/or organizations who have expressed an interest in the data recovery; and

    8) A schedule for the submission of progress reports to FRA, the Virginia SHPO, property owner, NPS- Fredericksburg Division, ABPP, CWT, and other Consulting Parties, as appropriate.

  b. Upon revision of the plan and acceptance of a data recovery plan by FRA and Virginia SHPO, DRPT shall complete or cause to be completed through the engagement of a qualified consultant all pedestrian survey, mapping, GIS overlays, and archaeological excavation described in the recovery plan. The report shall meet all state standards for data recovery reports and include required components. DRPT shall submit draft copies of the ensuing report concurrently to FRA, Virginia SHPO, property owner, NPS- Fredericksburg Division, ABPP, CWT, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). Final copies of the report shall be disseminated to FRA, Virginia SHPO, property owner, NPS- Fredericksburg Division, ABPP, CWT, and Library of Virginia for their collections, and to the other Consulting Parties upon written request. A final VCRIS form and associated packet shall be given to the Virginia SHPO at this time for their archives.

2. Using the information gathered during the mapping and data recovery, within four (4) years of the receipt of Project construction funding in this segment as described under Stipulation V(C), DRPT shall produce, or cause to be produced through the engagement of a qualified consultant, a scholarly article discussing the historical and archaeological importance of this site. DRPT shall consult with FRA, Virginia SHPO, NPS- Fredericksburg Division, and other Consulting Parties, as appropriate, regarding the location for submittal for publication. The

final publication submittal location shall be determined based on consensus of those parties involved in the consultation. DRPT shall submit the article to the agreed upon publication and shall have no other obligations with respect to any actions that may be taken by the publisher once the article is submitted and accepted or declined, except that DRPT shall undertake any revisions or provide other assistance requested by the publisher if the article is accepted for publication.

3. Within one (1) year of the completion of the archaeological report, DRPT shall fund the fabrication and installation of an interpretive sign in a location deemed appropriate by NPS- Fredericksburg Division as part of their signage initiative program to disseminate information about Civil War camps to the general public. In consultation with FRA, Virginia SHPO, NPS- Fredericksburg Division, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be prepared through the engagement of a qualified consultant, draft text and layout for the interpretive sign. The draft text, layout, and proposed location for placement of the interpretive sign shall be submitted to FRA, Virginia SHPO, and other Consulting Parties, as appropriate, for review and comment, and NPS-Fredericksburg Division for review and approval, as described under Stipulation IV(B) and (C). Within six (6) months after the interpretive sign the text, layout, and location are approved by NPS- Fredericksburg Division, DRPT shall produce the interpretive sign and install it. NPS- Fredericksburg Division is under no obligation to approve the interpretive sign. If NPS- Fredericksburg Division does not approve the interpretive sign to be a part of their marker and signage program, DRPT shall consult with FRA, Virginia SHPO and other Consulting Parties, as appropriate, to determine an appropriate method to interpret the historic site to the public.

E. Rappahannock River Railroad Bridge and Structures/Platform (DHR Inventory No. 111-0132-0025)

1. Draft designs for the new Rappahannock River Bridge, associated structures in downtown Fredericksburg, and new platform shall be compatible with the architectural and historic character of the existing structure and nearby historic properties and meet the guidelines set forth for new construction in the Old and Historic Fredericksburg District, under the auspice of the Fredericksburg Architectural Review Board (ARB). DRPT shall submit draft design plans for the new bridge at the schematic, 30%, 65%, and 90% stages concurrently to FRA, Virginia SHPO, property owner, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). The design packet shall include a set of bridge plans and elevations, as well as a schematic showing the proposed bridge design in relation to the existing Rappahannock River Railroad Bridge and Structures/Platform to show proposed visual modifications.

2. Within one (1) year of the receipt of funding for Project construction in this segment as described under Stipulation V(C), DRPT shall produce, or cause to be produced through the engagement of a qualified consultant, measured drawings of the existing bridge, structures and platform prior to any alterations. The drawings shall conform to the guidelines specified by the NPS as set forth in Historic American Buildings Survey/Historic American Engineering Record (HABS/HAER) Guidelines (http://www.cr.nps.gov/hdp/standards/haerguidelines.htm).

3. Within one (1) year of the receipt of funding for Project construction in this segment as described under Stipulation V(C) and concurrent with the measured drawings, DRPT shall engage a professional photographer with experience in preparing large-format, black-and-white, archival-quality photographic documentation for HAER and HAER-type documentation projects to complete large-format photographs of the existing Rappahannock River Railroad Bridge and Structures/Platform. Photographs shall comply with HABS/HAER Photographs Specifications and Guidelines (http://www.cr.nps.gov/hdp/standards/HABS/photospecs.pdf) and DHR's "Photographic Documentation for Virginia Department of Historic Resources Survey (Updated 2016). Negatives and print sizes shall be 4" x 5". Negatives and prints shall be processed, labeled, and packaged according to HABS/HAER archival standards. A list of photo captions (index to photos) and a site plan of the bridge showing the location and direction of the photographs (key to photos) shall be included.

   Photographic views shall show the bridge and associated railway, structures within downtown Fredericksburg, and extant platform, as well as the surrounding landscape. Overview and detail photos of the bridge and other elements shall be provided, documenting as much as possible of the engineering and construction methods for the property including exterior elevations and detailed views of significant architectural or historical features.

4. Prior to beginning construction and within four (4) years of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), DRPT shall create, or cause to be created through the engagement of a qualified consultant, a cultural landscape study of the Rappahannock River watershed and historic transportation crossings within the City of Fredericksburg, bounded by the Blue/Grey Parkway bridge on the south and Hawke Street on the north. The cultural landscape study shall follow the Secretary of the Interior's Standards for conducting historic landscape studies as well as applicable guidance found in NPS Bulletin #18, *How to Evaluate and Nominate Designed Historic Landscapes* and other appropriate publications and guidance documents. The cultural landscape study shall include, at a minimum, completing archival research on this segment of the Rappahannock River focusing on historic images and maps of this corridor, recording historic transportation crossings in this area including bridges and ferries, and gathering spatial data on the current parameters of the waterway in this area. In addition,

the work shall document the extant railroad bridge crossing as an iconic vista in various cultural media in the twentieth century. The data shall be used to create a contextual narrative on the evolution of the waterway over time inclusive of GIS overlays and photodocumentation. The cultural landscape study shall also include copies of the measured drawings and photographs as collected during tasks II.E.2 and II.E.3 above. The ensuing cultural landscape study shall be submitted concurrently to FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). DRPT shall disseminate final copies to FRA, Virginia SHPO, City of Fredericksburg, Central Rappahannock Regional Library, and HFFI for their collections, and to the other Consulting Parties upon written request. Full-sized copies of the measured drawings and large-format photographs will also be placed on file with the Virginia SHPO and Central Rappahannock Regional Library.

F. Bridge/Marye's Mill (Site 44SP0187), Block 49/Train Station (Site 44SP0688), and Block 48/Train Station (Site 44SP0687)

1. These three (3) sites (44SP0187, 44SP0688, and 44SP0687) are all located within three (3) adjacent blocks in downtown Fredericksburg. DRPT shall avoid, to the greatest extent possible, all three (3) sites. For the portions of the archaeological sites that cannot be avoided and where appropriate, prior to ground disturbing activities and within two (2) years of receipt of Project construction funding in this segment as described under Stipulation V(C), DRPT shall conduct an intensive pedestrian survey with mapping of all visible surface features and GIS map overlays at each site (as appropriate) followed by Phase III archaeological data recovery in areas with the potential for intact subsurface remains. The archaeological work at all three sites shall include the following components:

   a. DRPT shall develop a separate draft data recovery plan per site for the investigations and submit the plan concurrently to FRA, Virginia SHPO, City of Fredericksburg, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). The plan shall be consistent with the Secretary of the Interior's *Standards and Guidelines for Archaeological Documentation* (48 Fed. Reg. 44734–37, September 29, 1983) and take into account ACHP's publication, *Treatment of Archaeological Properties* (1980). Each plan shall include:

      1) The property, properties, or portions of properties where site-specific data recovery plans shall be carried out;

      2) Any property, properties, or portions of properties that will be destroyed or altered without data recovery;

      3) The research questions to be addressed through data recovery, with an explanation of their relevance and importance;

4) The methods to be used with an explanation of their relevance to the research questions;

5) The methods to be used in analysis, data management, and dissemination of data, including a schedule;

6) The proposed disposition of recovered materials and records;

7) Proposed methods of disseminating the results of the work to interested individuals and/or organizations who have expressed an interest in the data recovery; and

8) A schedule for the submission of progress reports to FRA, Virginia SHPO, the City of Fredericksburg, and other Consulting Parties, as appropriate.

b. Upon revision of the plan and acceptance of the three (3) data recovery plans by FRA and Virginia SHPO, DRPT shall complete, or cause to be completed through the engagement of a qualified consultant, all pedestrian survey, mapping, GIS overlays, and archaeological excavation described in the recovery plan at each site. Depending on the approved data recovery plan, one (1) report containing data on all three (3) excavations may be produced, or three separate documents may be completed. In either case, the report(s) shall meet all state standards for data recovery reports and include required components. DRTP shall submit draft copies of the ensuing report concurrently to FRA, Virginia SHPO, City of Fredericksburg, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). Final copies of the report shall be disseminated to FRA, Virginia SHPO, City of Fredericksburg, Central Rappahannock Regional Library, and Library of Virginia for their collections, and to the other Consulting Parties upon written request. Final VCRIS forms and associated packets shall be given to the Virginia SHPO at this time for their archives.

2. Using the information gathered during the mapping and data recovery, within four (4) years of the receipt of Project construction funding in this segment as described under Stipulation V(C), DRPT shall produce, or cause to be produced through the engagement of a qualified consultant, a cohesive scholarly article discussing the historical and archaeological importance of these three (3) sites. FRA, DRPT, Virginia SHPO, City of Fredericksburg, and other Consulting Parties, as appropriate, shall discuss the location for submittal for publication, and the final publication submittal location shall be determined based on consensus of involved parties. DRPT shall submit the article to the agreed upon location and shall have no other obligations with respect to any actions that may be taken by the publisher once the article is submitted and accepted or declined, except that DRPT shall undertake any revisions or provide other assistance requested by the publisher if the article is accepted for publication.

3. Within three (3) years of receipt of funding for Project construction in this segment, as described under Stipulation V(C), DRPT shall provide, or cause to be provided through the engagement of a qualified consultant, a lecture for the general public on the results of the archaeological studies on these three sites, preferably to be presented in the City of Fredericksburg. This lecture shall be advertised in the Fredericksburg area and the surrounding region.

4. Within one (1) year of completion of the new passenger facility in Fredericksburg associated with this project, DRPT shall fund the fabrication and installation of an interpretive sign near the passenger facility as part of the City of Fredericksburg's signage initiative program to disseminate information to the general public about the history of this area and the archaeological studies completed at Sites 44SP0187, 44SP0688, and 44SP0687. In consultation with FRA, Virginia SHPO, the City of Fredericksburg, HFFI, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be prepared through the engagement of a qualified consultant, draft text and layout for the interpretive sign. The draft text, layout, and proposed location for placement of the interpretive sign, shall be submitted to FRA, Virginia SHPO, HFFI, and other Consulting Parties, as appropriate, for review and comment, and City of Fredericksburg for review and approval, as described under Stipulation IV(B) and (C). Within six (6) months after the interpretive sign text, layout, and location are approved by City of Fredericksburg DRPT shall produce the interpretive sign and install it. The City of Fredericksburg is under no obligation to approve the interpretive sign. If the City of Fredericksburg does not approve the interpretive sign to be a part of their marker and signage program or if a suitable location for placement cannot be found, DRPT shall consult with FRA, Virginia SHPO, HFFI, and other Consulting Parties, as appropriate, to determine an appropriate method to interpret the historic properties to the public.

5. Within one (1) year of completion of the new passenger facility in Fredericksburg associated with this project, DRPT shall fund the fabrication and installation of a museum exhibit within the passenger facility to disseminate information to the general public about the history of this area and the archaeological studies completed at Sites 44SP0187, 44SP0688, and 44SP0687. In consultation with FRA, Virginia SHPO, the City of Fredericksburg, HFFI, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be prepared through the engagement of a qualified consultant, draft text and layout for the exhibit. The draft text and layout shall be submitted to FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). Six (6) months after finalizing the text and layout for the exhibit, DRPT shall produce and install the exhibit within the station.

G. Fredericksburg Historic District (DHR Inventory No. 111-0132)

1. Draft designs for the new parking deck in downtown Fredericksburg shall be compatible with the architectural and historic character of the surrounding historic district and meet the guidelines set forth for new construction in the Old and Historic Fredericksburg District, under the auspice of the Fredericksburg ARB. DRPT shall submit draft design plans for the new structure at the schematic, 30%, 65%, and 90% stages concurrently to FRA, Virginia SHPO, City of Fredericksburg, Fredericksburg Architectural Review Board, HFFI, and the other Consulting Parties for review and comment as described under Stipulation IV(B) and (C). The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed structure design in relation to the surrounding historic district to show proposed visual modifications.

2. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation V(C), DRPT shall create, or cause to be created, a historic context on the evolution of the rail system in downtown Fredericksburg. This includes acquiring archival data on the establishment of and modifications to the rail line between the Rappahannock River and Hazel Run. The data obtained during the research shall be compiled into a report. DRPT shall submit a draft report concurrently to FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). DRPT shall disseminate the final report to FRA, Virginia SHPO, City of Fredericksburg, HFFI, Central Rappahannock Regional Library, and Library of Virginia, and to public libraries and historical societies for their collections; and to the other Consulting Parties, upon written request.

3. Within three (3) years of receipt of funding for Project construction in this segment, as described under Stipulation V(C), DRPT shall provide, or cause to be provided through the engagement of a qualified consultant, a lecture for the general public on the results of the contextual study on the evolution of the railroad in Fredericksburg, preferably to be presented in the city. This lecture shall be advertised in the Fredericksburg area and the surrounding region.

4. Within three (3) years of receipt of funding for Project construction in this segment, as described under Stipulation V(C) and concurrent with the public presentation, DRPT shall consult with FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties, as appropriate, to find an appropriate website, such as the Local History page of the Central Rappahannock Regional Library, to host an abbreviated narrative on the history of the railroad in Fredericksburg, as well as details of the Project. DRPT shall request that the identified website host the contents for a minimum of two (2) years. If no website host can be identified, DRPT shall consult with FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties, as

appropriate, to identify another means to disseminate the abbreviated narrative to the public. DRPT shall submit a draft of the webpage content concurrently to FRA, Virginia SHPO, City of Fredericksburg, HFFI, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C).

H. Earthwork/ Jackson's Earthwork (Site 44SP0468)

1. DRPT shall, to the extent possible, avoid Site 44SP0468. For the portions of the archaeological site that cannot be avoided, DRPT shall conduct an intensive pedestrian survey with mapping of all visible surface features and GIS map overlays followed by Phase III archaeological data recovery in areas with the potential for intact subsurface remains prior to ground disturbing activities and within two (2) years of receipt of Project construction funding in this segment as described under Stipulation V(C). The archaeological work shall include the following components:

    a. DRPT shall develop a draft data recovery plan for the investigations and submit the plan concurrently to FRA and Virginia SHPO for review and approval, and to the property owner, NPS- Fredericksburg Division, ABPP, CWT, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). The plan shall be consistent with the Secretary of the Interior's *Standards and Guidelines for Archaeological Documentation* (48 Fed. Reg. 44734–37, September 29, 1983) and take into account ACHP's publication, *Treatment of Archaeological Properties* (1980). The plan shall include:

        1) The property, properties, or portions of properties where site-specific data recovery plans shall be carried out;

        2) Any property, properties, or portions of properties that will be destroyed or altered without data recovery;

        3) The research questions to be addressed through data recovery, with an explanation of their relevance and importance;

        4) The methods to be used with an explanation of their relevance to the research questions;

        5) The methods to be used in analysis, data management, and dissemination of data, including a schedule;

        6) The proposed disposition of recovered materials and records;

        7) Proposed methods of disseminating the results of the work to interested individuals and/or organizations who have expressed an interest in the data recovery; and

8) A schedule for the submission of progress reports to FRA, the Virginia SHPO, property owner, NPS- Fredericksburg Division, ABPP, CWT, and other Consulting Parties, as appropriate.

b. Upon revision of the plan and approval of a data recovery plan by FRA and Virginia SHPO, DRPT shall complete, or cause to be completed through the engagement of a qualified consultant, all pedestrian survey, mapping, GIS overlays, and archaeological excavation described in the recovery plan. The report shall meet all state standards for data recovery reports and include required components. DRPT shall submit draft copies of the ensuing report concurrently to FRA, Virginia SHPO, property owner, NPS- Fredericksburg Division, ABPP, CWT, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). Final copies of the report shall be disseminated to FRA, Virginia SHPO, property owner, NPS- Fredericksburg Division, ABPP, CWT, and Library of Virginia for their collections, and to other Consulting Parties upon written request. DRPT will give to the Virginia SHPO a final VCRIS form and associated packet for DHR's archives.

2. Using the information gathered during the mapping and data recovery, within four (4) years of the receipt of Project construction funding in this segment as described under Stipulation V(C), DRPT shall produce, or cause to be produced through the engagement of a qualified consultant, a scholarly article discussing the historical and archaeological importance of this site. FRA, DRPT, Virginia SHPO, NPS- Fredericksburg Division, ABPP, CWT, and other Consulting Parties, as appropriate, shall discuss the location for submittal for publication, and the final publication submittal location shall be determined based on consensus of involved parties. DRPT shall submit the article to the agreed upon location and shall have no other obligations with respect to any actions that may be taken by the publisher once the article is submitted and accepted or declined, except that DRPT shall undertake any revisions or provide other assistance requested by the publisher if the article is accepted for publication.

3. Within one (1) year of the completion of the archaeological report, DRPT shall fund the fabrication and installation of an interpretive sign in a location deemed appropriate by the NPS- Fredericksburg Division as part of their signage initiative program to disseminate information about Civil War camps to the general public. In consultation with FRA, Virginia SHPO, NPS- Fredericksburg Division, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be prepared through the engagement of a qualified consultant, draft text and layout for the interpretive sign. The draft text, layout, and proposed location for placement of the interpretive sign shall be submitted to FRA, Virginia SHPO, and other Consulting Parties, as appropriate, for review and comment; and to NPS- Fredericksburg Division for review and approval, as described under Stipulation IV(B) and (C). Within six (6) months after the interpretive sign, the text, layout, and location are approved by NPS- Fredericksburg Division, DRPT shall produce and install the interpretive sign. NPS- Fredericksburg Division is

under no obligation to approve the signage. If the NPS- Fredericksburg Division does not approve the interpretive sign to be a part of their marker and signage program or if a suitable location for placement cannot be found, DRPT shall consult with FRA, Virginia SHPO, NPS- Fredericksburg Division, and other Consulting Parties, as appropriate, to determine an appropriate method to interpret the historic site to the public.

I. Doswell Historic District (DHR Inventory No. 042-5448)

1. Within two (2) years of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), DRPT shall complete, or cause to be completed through the engagement of a qualified consultant, a NRHP nomination form for the historic district. DRPT shall submit the draft nomination form concurrently to FRA, Hanover County, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C); and to Virginia SHPO for review and approval pursuant to the agency's established procedures and regulations for the Register Program. DRPT shall submit the final draft of the NRHP nomination to Virginia SHPO for listing to the NRHP as prescribed by the agency's established procedures and regulations for the Register Program. DRPT shall have no other obligations with respect to any actions that may be taken by Hanover County, the property owners, the Virginia SHPO, or any other entity relating to the nomination of the property to the NRHP. The Virginia Board of Historic Resources is under no obligation to approve the nomination for listing to the NRHP.

2. Within two (2) years of the receipt of funding for Project construction in this segment, as described under Stipulation V(C) and concurrent with the NRHP nomination, DRPT shall fund the fabrication and installation of a Virginia state historical highway marker, in accordance with Va. Code Ann. §§ 10.1–2202, 10.1–2204, and 10.1–2209, which govern the State Historical Highway Markers Program, to be located within the Doswell Historic District to disseminate information about the history of Doswell to the general public. The historical highway marker shall summarize the historical significance of the Town of Doswell and the related railroad history in this area. In consultation with FRA, Virginia SHPO, Hanover County, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be prepared, draft text for the state historical highway marker. DRPT shall submit the draft text for the state historical highway marker to the Virginia SHPO historical highway marker program for review and approval pursuant to the agency's established procedures and regulations for the State Historical Highway Markers Program; and to Hanover County and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). The Virginia SHPO shall then perform its respective role, as prescribed by the agency's established procedures and regulations for the Virginia State Historical Highway Markers Program.

The Virginia Board of Historic Resources is under no obligation, and nothing in this MOA should be construed to require the Virginia Board of Historic Resources, to approve the state historical highway marker. If the Virginia Board of Historic Resources approves the state historical highway marker, DRPT shall request that the Virginia Department of Transportation (VDOT) install the state historical highway marker within six (6) months after its approval. The VDOT is under no obligation to accept this request. If the Virginia Board of Historic Resources does not approve the state historical highway marker, DRPT shall consult with FRA, Virginia SHPO, Hanover County, and other Consulting Parties, as appropriate, to determine an appropriate method to interpret the Doswell Historic District to the public.

3. Within two (2) years of the receipt of funding for Project construction in this segment, as described under Stipulation V(C) and concurrent with the marker, DRPT shall consult with FRA, Virginia SHPO, Hanover County, Hanover County Historical Commission, and other Consulting Parties to find an appropriate website, such as Hanover's Historic Places page of the Hanover County Historical Society's webpage (http://www.hchs.us/places.html/), to host an abbreviated narrative on the history of Doswell, as well as details of the Project. DRPT shall request that the identified website host the contents for a minimum of two (2) years. If no website host can be identified, DRPT shall consult with FRA, Virginia SHPO, Hanover County, and other Consulting Parties to identify another means to disseminate the abbreviated narrative to the public. DRPT shall submit a draft of the webpage content concurrently to FRA, Virginia SHPO, Hanover County, Hanover County Historical Commission, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C).

J. Doswell Depot and Tower (DHR Inventory No. 042-0093)

1. Within one (1) year of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), DRPT shall produce, or cause to be produced through the engagement of a qualified consultant, measured drawings of the existing depot and tower prior to any alterations. The drawings shall conform to the guidelines specified by the NPS as set forth in Historic American Buildings Survey/Historic American Engineering Record (HABS/HAER) Guidelines (http://www.cr.nps.gov/hdp/standards/haerguidelines.htm). Copies of the drawings will be archived at the Virginia SHPO and the Hanover County Department of Planning.

2. Within one (1) year of the receipt of funding for Project construction in this segment, as described under Stipulation V(C) and concurrent with the measured drawings, DRPT shall engage a professional photographer with experience in preparing large-format, black-and-white, archival-quality photographic documentation for HAER and HAER-type documentation projects to complete large-format photographs of the existing depot and tower. Photographs shall

comply with HABS/HAER Photographs Specifications and Guidelines (http://www.cr.nps.gov/hdp/standards/HABS/photospecs.pdf) and DHR's "Photographic Documentation for Virginia Department of Historic Resources Survey (Updated 2016). Negatives and print sizes shall be 4" x 5". Negatives and prints shall be processed, labeled, and packaged according to HABS/HAER archival standards. A list of photo captions (index to photos) and a site plan of the building showing the location and direction of the photographs (key to photos) shall be included.

Photographic views shall show both the depot and the tower, as well as the surrounding landscape. Overview and detail photos of the depot, tower, and other elements shall be provided, documenting as much as possible of the engineering and construction methods for the property including exterior elevations and detailed views of significant architectural or historical features. Copies of the photographs will be archived at the Virginia SHPO and the Hanover County Department of Planning.

3. Prior to construction of the Project in this area and after the measured drawings and HAER photographic documentation is completed, DRPT shall employ a qualified structural engineer with demonstrated experience working with historic properties to carefully move the tower. The tower shall be installed outside of the Project limits of disturbance using the Secretary of the Interior's Standards for Reconstruction and NPS Preservation Briefs, Technical Notes, and other relevant guidance and accepted historic preservation practices, as appropriate. DRPT shall consult on the final location of the tower with FRA, Virginia SHPO, Hanover County, property owners, and other Consulting Parties, as appropriate, prior to moving the historic building.

4. Within two (2) years of the receipt of funding for Project construction in this segment as described under Stipulation V(C), DRPT shall fund the fabrication and installation of an interpretive sign near either the depot or the moved tower as part of Hanover County's signage initiative program to disseminate information about the historic of the railroad in this area, the Project, and the process to move the tower to the general public. In consultation with FRA, Virginia SHPO, Hanover County, the property owners, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be prepared through the engagement of a qualified consultant, draft text and layout for the interpretive sign. The draft text, layout, and proposed location for placement of the interpretive sign, shall be submitted to FRA, Virginia SHPO, the property owners, and other Consulting Parties, as appropriate, for review and comment; and Hanover County for review and approval, as described under Stipulation IV(B) and (C). Within six (6) months after the interpretive sign text, layout, and location are approved by Hanover County, DRPT shall produce the interpretive sign and install it. Hanover County is under no obligation to approve the interpretive sign. If Hanover County does not approve the signage to be a part of their marker and signage program or if a suitable location for placement

cannot be found, DRPT shall consult with FRA, Virginia SHPO, Hanover County, and other Consulting Parties, as appropriate, to determine an appropriate method to interpret the historic properties to the public.

K. Berkleytown Historic District (DHR Inventory No. 166-5073)

1. Draft designs for the new structural overpass of Archie Cannon Road shall be compatible with the architectural and historic character of the adjacent historic district and comply with all applicable Town of Ashland design standards. DRPT shall submit draft design plans for the new structure at the schematic, 30%, 65%, and 90% stages concurrently to FRA, Virginia SHPO, Town of Ashland, Ashland Museum, and the other Consulting Parties for review and comment as described under Stipulation IV(B) and (C). The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed structure design in relation to the adjacent historic district to show proposed visual modifications.

2. Within one (1) year of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), DRPT shall complete, or cause to be completed through the engagement of a qualified consultant, two (2) oral histories of individuals with an extended tenure living and/or working within the Berkleytown Historic District and are knowledgeable of the history and evolution of the area, to include area residents, town staff, or members of the Ashland Museum, among others. Interviews shall be taped, and transcriptions of the interviews shall be submitted to FRA, Virginia SHPO, Town of Ashland, Ashland Museum, and the Library of Virginia for their collections, and the other Consulting Parties upon written request.

3. Within two (2) years of the receipt of funding for Project construction in this segment, as described under Stipulation V(C), DRPT shall complete, or cause to be completed through the engagement of a qualified consultant, a NRHP nomination form for the historic district. DRPT shall submit the draft nomination form concurrently to FRA, Town of Ashland, Ashland Museum, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C); and to the Virginia SHPO for review and approval pursuant to the agency’s established procedures and regulations for the Register Program. DRPT shall submit the final draft of the NRHP nomination to Virginia SHPO for listing to the NRHP as prescribed by the agency's established procedures and regulations for the Register Program. DRPT shall have no other obligations with respect to any actions that may be taken by the Town of Ashland, the property owners, the Virginia SHPO, or any other entity relating to the nomination of the property to the NRHP. The Virginia Board of Historic Resources is under no obligation to approve the nomination for listing to the NRHP.

4. Within two (2) years of the receipt of funding for Project construction in this segment, as described under Stipulation V(C) and concurrent with the NRHP nomination, DRPT shall fund the fabrication and installation of a Virginia state historical highway marker, in accordance with Va. Code Ann. §§ 10.1–2202, 10.1–2204, and 10.1–2209, which govern the State Historical Highway Markers Program, to be located within the Berkleytown Historic District to disseminate information about the history of Berkleytown to the general public. The historical highway marker shall summarize the historical significance of the community. In consultation with FRA, Virginia SHPO, Town of Ashland, Ashland Museum, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be prepared, draft text for the state historical highway marker. DRPT shall submit the draft text for the state historical highway marker to the Virginia SHPO historical highway marker program for review and approval pursuant to the agency’s established procedures and regulations for the State Historical Highway Markers Program, and to the Town of Ashland, Ashland Museum, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). The Virginia SHPO shall then perform its respective role, as prescribed by the agency's established procedures and regulations for the Virginia State Historical Highway Marker Program.

   The Virginia Board of Historic Resources is under no obligation, and nothing in this MOA should be construed to require the Virginia Board of Historic Resources, to approve the state historical highway marker. If the Virginia Board of Historic Resources approves the state historical highway marker, DRPT shall request that VDOT install the state historical highway marker within six (6) months after its approval. The VDOT is under no obligation to accept this request. If the Virginia Board of Historic Resources does not approve the state historical highway marker, DRPT shall consult with FRA, Virginia SHPO, the Town of Ashland, Ashland Museum, and other Consulting Parties, as appropriate, to determine an appropriate method to interpret the Berkleytown Historic District to the public.

5. Within two (2) years of the receipt of funding for Project construction in this segment, as described under Stipulation V(C) and concurrent with the NRHP nomination, DRPT shall complete, or cause to be completed through the engagement of a qualified consultant, narrative text associated with a walking tour of the historic district. Text is to be completed in partnership with the Ashland Museum. DRPT shall submit the draft walking tour text concurrently to FRA, Virginia SHPO, Town of Ashland, Ashland Museum, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). DRPT shall submit the final draft of the walking tour text to the Town of Ashland to use if it so chooses, and in a manner it deems appropriate. DRPT shall have no other obligations with respect to any actions that may be taken by the Town of Ashland, the Ashland Museum, the property owners, the Virginia SHPO, or any other entity relating to the walking tour.

L. Laurel Industrial School Historic District (DHR Inventory No. 043-0292) and Main Building/Robert Stiles Building (DHR Inventory No. 043-0292-0001)

1. Draft designs for the new structural overpass of Hungary Road shall be compatible with the architectural and historic character of the adjacent historic district and nearby historic properties and comply with all applicable City of Richmond design standards. DRPT shall submit draft design plans for the new structure at the schematic, 30%, 65%, and 90% stages concurrently to FRA, Virginia SHPO, Henrico County, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed structure design in relation to the adjacent historic district and nearby historic properties to show proposed visual modifications.

2. Within four (4) years of receipt of Project construction funding in this segment as described under Stipulation V(C), DRPT shall create, or cause to be created through the engagement of a qualified consultant, a historic context on late-nineteenth/early-twentieth century reform schools in Central Virginia. This includes acquiring archival data on the Laurel Industrial School Historic District and other similar institutions in central Virginia, completing an abbreviated architectural study of nearby, extant facilities that functioned in a similar capacity, and briefly identifying comparable facilities in other parts of the state for contextual analysis. The data obtained during the research shall be compiled into a report. DRPT shall submit a draft report concurrently to FRA, Virginia SHPO, Henrico County, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). DRPT shall disseminate the final report to FRA, Virginia SHPO, Henrico County, and Library of Virginia, and public libraries and historical societies for their collections; and to the other Consulting Parties upon written request. If appropriate, DRPT shall provide final VCRIS forms and associated packet to the Virginia SHPO at this time for their archives related to any facilities documented as part of this research that are not currently in their records.

3. As part of the contextual research completed above, DRPT shall create, or cause to be created through the engagement of a qualified consultant, a historic map and aerial study of the Laurel Industrial School Historic District and surrounding area. A series of georeferenced, GIS-based overlays shall be created to illustrate the evolution of the landscape and road system in this area. The resulting documents shall include a series of illustrations and an accompanying narrative describing the history of the road system and landscape near the intersection of Hungary Road and the railroad. DRPT shall submit a draft report concurrently to FRA, Virginia SHPO, Henrico County, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). DRPT shall disseminate the final report and associated digital data to FRA,

Virginia SHPO, Henrico County, and Library of Virginia, and public libraries and historical societies for their collections; and to the other Consulting Parties upon written request.

4. Within four (4) years of the receipt of funding for Project construction in this segment as described under Stipulation V(C), DRPT shall fund the fabrication and installation of an interpretive sign near the Main Building/Robert Stiles Building as part of Hanover County's signage initiative program to disseminate information about the historic of the surrounding historic district, the Main Building/Robert Stiles Building, and association of this area with the railroad to the general public. In consultation with FRA, Virginia SHPO, Henrico County, the property owner, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be prepared, draft text and layout for the interpretive sign. The draft text and layout and proposed location for placement of the interpretive sign shall be submitted to FRA, Virginia SHPO, the property owner, and other Consulting Parties, as appropriate, for review and comment; and to Henrico County for review and approval, as described under Stipulation IV(B) and (C). Within six (6) months after the interpretive sign text, layout, and location are approved by Henrico County, DRPT shall produce the interpretive sign and install it. Henrico County is under no obligation to approve the interpretive sign. If Henrico County does not approve the interpretive sign to be a part of their marker and signage program or if a suitable location for placement cannot be found, DRPT shall consult with FRA, Virginia SHPO, Henrico County, and other Consulting Parties, as appropriate, to determine an appropriate method to interpret the historic properties to the public.

M. Shockoe Valley & Tobacco Row Historic District (DHR Inventory No. 127-0344)

1. Draft designs for the platform and other structural changes to Main Street Station and the surrounding rail facilities in Shockoe Bottom shall be compatible with the architectural and historic character of the surrounding historic district and meet the guidelines set forth in the City Old and Historic District, under the auspice of the Richmond Commission of Architectural Review. DRPT shall submit draft design plans for the new platform and other structural changes at the schematic, 30%, 65%, and 90% stages concurrently to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Richmond Commission of Architectural Review, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties for review and comment as described under Stipulation IV(B) and (C). The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed structure design in relation to the surrounding historic district and nearby historic properties to show proposed visual modifications.

2. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation V(C), DRPT shall create, or cause to be created through the engagement of a qualified consultant, a historic context on the

association of the RF&P railroad, the downtown Richmond segment of the Virginia Central Railroad, and other precursors of the Chesapeake and Ohio/Seaboard Railroad and the slave trade in Virginia. This includes acquiring archival data on the establishment and proliferation of the slave trade in Shockoe Bottom and associated activities between Richmond and Washington, D.C along the rail lines, as well as gathering reconnaissance-level data on any extant buildings or known archaeological sites along the rail corridor between Washington, D.C. and Richmond that have an association with the slave trade. The task shall also include community engagement and ethnographic research regarding the significance of the slave trade in Shockoe Bottom and surrounding district to the descendent community. DRPT or its consultants, as applicable, shall consult with Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Richmond Commission of Architectural Review, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties, as appropriate, to identify community members to include in such ethnographic research. The data obtained during all phases of research shall be compiled into a report and georeferenced on modern aerial maps to create a series of GIS-based overlays. DRPT shall submit a draft report concurrently to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). DRPT shall disseminate the final report to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, Library of Virginia, and public libraries and historical societies for their collections; and to the other Consulting Parties upon written request. The digital data obtained as part of this process shall also be disseminated to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, Library of Virginia, and to other groups who have an interest in this topic upon written request, provided that the dissemination meets the requirements set forth in the Archeological Resources Protection Act.

3. Within four (4) years of receipt of funding for Project construction in this segment, as described under Stipulation V(C), DRPT shall provide, or cause to be provided through the engagement of a qualified consultant, a lecture for the general public on the results of the contextual study on the association of the RF&P and associated railroads and the slave trade, preferably to be presented in Richmond. The exact time and location will be determined based on consultation with Consulting Parties, with a goal of maximizing opportunities for public attendance. This lecture shall be advertised in Richmond, Fredericksburg, Alexandria, and other areas highlighted in the research.

4. Within four (4) years of funding in this segment as described in Stipulation V(C) and concurrent with the preparation of the RF&P and associated railroads and slave trade context, DRPT shall fund the fabrication and installation of a

Virginia state historical highway marker, in accordance with Va. Code Ann. §§ 10.1–2202, 10.1–2204, and 10.1–2209, which govern the State Historical Highway Markers Program, to be located near the site of Lumpkin’s Jail/Devil’s Half Acre (Site 44HE1053) to disseminate information about the site, the nearby Burial Ground for Negros (Site 44HE1089), and the associated slave trade in this area to the general public. In consultation with FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be prepared, draft text for the state historical highway marker. DRPT shall submit the draft text for the state historical highway marker to the Virginia SHPO historical highway marker program for review and approval pursuant to the agency’s established procedures and regulations for the State Historical Highway Markers Program; and to the City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). The Virginia SHPO shall then perform its respective role, as prescribed by the agency's established procedures for the Virginia State Historical Highway Markers Program.

The Virginia Board of Historic Resources is under no obligation, and nothing in this MOA should be construed to require the Virginia Board of Historic Resources, to approve the state historical highway marker. If the Virginia Board of Historic Resources approves the state historical highway marker, DRPT shall request that VDOT install the state historical highway marker within six (6) months after its approval. The VDOT is under no obligation to accept this request. If the Virginia Board of Historic Resources does not approve the state historical highway marker, DRPT shall consult with FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, to determine an appropriate method to interpret the slave trade and associated sites of significance in this area to the public.

5. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation V(C) and concurrent with the context preparation, DRPT shall work with the City of Richmond, City of Richmond Planning and Preservation Division, Virginia SHPO, Historic Richmond Foundation, Preservation Virginia, NTHP, and Consulting Parties, as appropriate, to establish boundaries for a potential historic district (or other appropriate historic resource type) that encompasses resources associated with the slave trade in Shockoe Bottom. The geographic data shall be added to the ongoing historic district research completed by the Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, and others on file at the Virginia SHPO office. DRPT shall submit a draft boundary and any other pertinent data concurrently to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation,

Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). DRPT shall disseminate the final boundary and other pertinent data to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and the other Consulting Parties upon written request. The digital data obtained as part of this process will also be used to update the Virginia SHPO online site database provided that the dissemination meets the requirements set forth in the Archeological Resources Protection Act.

N. Main Street Station Parking Lot/Railroad (Site 44HE1098), Railroad, Warehouse (44HE1097), and Warehouse (Site 44HE1094)

1. These three (3) sites are all located within two (2) adjacent blocks in Shockoe Bottom. DRPT shall avoid all three (3) sites (44HE1098, 44HE1097, and 44HE1094) where possible. For the portions of the archaeological sites that cannot be avoided and where appropriate, DRPT shall conduct Phase III archaeological data recovery in areas with the potential for intact subsurface remains prior to ground disturbing activities and within two (2) years of receipt of Project construction funding in this segment as described under Stipulation V(C). The archaeological work at all three (3) sites shall include the following components:

    a. DRPT shall develop a separate draft data recovery plan per site for the investigations and submit the plan concurrently to FRA and Virginia SHPO for review and approval, and to City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). The plan shall be consistent with the Secretary of the Interior's *Standards and Guidelines for Archaeological Documentation* (48 Fed. Reg. 44734–37, September 29, 1983) and take into account ACHP's publication, *Treatment of Archaeological Properties* (1980). Each plan shall include:

        1) The property, properties, or portions of properties where site-specific data recovery plans shall be carried out;

        2) Any property, properties, or portions of properties that will be destroyed or altered without data recovery;

        3) The research questions to be addressed through data recovery, with an explanation of their relevance and importance;

        4) The methods to be used with an explanation of their relevance to the research questions;

        5) The methods to be used in analysis, data management, and dissemination of data, including a schedule;

        6) The proposed disposition of recovered materials and records;

        7) Proposed methods of disseminating the results of the work to interested individuals and/or organizations who have expressed an interest in the data recovery; and

        8) A schedule for the submission of progress reports to FRA, Virginia SHPO, City of Richmond, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate.

    b. Upon revision of the plan and approval of the three (3) data recovery plans by FRA and Virginia SHPO, DRPT shall complete, or cause to be completed through the engagement of a qualified consultant, all GIS overlays and archaeological excavation described in the recovery plan at each site. Depending on the approved data recovery plan, one (1) report containing data on all three (3) excavations may be produced, or three (3) separate documents may be completed. In either case, the report(s) shall meet all state standards for data recovery reports and include required components. DRPT shall submit draft copies of the ensuing report concurrently to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties for review and comment as described under Stipulation IV(B) and (C). Final copies of the report shall be disseminated to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and Library of Virginia for their collections, and to other Consulting Parties upon written request. Final VCRIS forms and associated packets will be given to the Virginia SHPO at this time for their archives.

2. Using the information gathered during the mapping and data recovery, within four (4) years of the receipt of Project construction funding in this segment as described under Stipulation V(C), DRPT shall produce, or cause to be produced through the engagement of a qualified consultant, a cohesive scholarly article discussing the historical and archaeological importance of these three sites. FRA, DRPT, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, shall discuss the location for submittal for publication, and the final publication submittal location shall be determined based on consensus of involved parties. DRPT shall submit the article to the agreed upon location and shall have no other obligations with respect to any actions that may be taken by the publisher once the article is submitted and accepted or declined, except that DRPT shall undertake any revisions or provide other assistance requested by the publisher if the article is accepted for publication.

3. Within three (3) years of receipt of funding for Project construction in this segment, as described under Stipulation V(C), DRPT shall provide, or cause to be provided through the engagement of a qualified consultant, a lecture for the general public on the results of the archaeological studies on these three (3) sites, preferably to be presented in the City of Richmond. This lecture shall be advertised in the Richmond area and the surrounding region.

4. Within three (3) years of the receipt of funding for Project construction in this segment as described under Stipulation V(C), DRPT shall fund the fabrication and installation of an interpretive sign within or near Main Street Station as part of station's interior design or exterior landscaping to disseminate information about the history of this area and the archaeological studies completed at Sites 44HE1098, 44HE1097, and 44HE1094 to the general public. In consultation with FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, property owner, and other Consulting Parties, as appropriate, DRPT shall prepare, or cause to be prepared, draft text and layout for the interpretive sign. The draft text, layout, and proposed location for placement of the interpretive sign shall be submitted to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, for review and comment; and owners and managers of Main Street Station for review and approval, as described under Stipulation IV(B) and (C). Within six (6) months after the interpretive sign text, layout, and location are approved by the owners and managers of Main Street Station DRPT shall produce the interpretive sign and install it. The owners and managers of Main Street Station are under no obligation to approve the interpretive sign. If the owners and managers of Main Street Station do not approve the signage to be a part of their facility or if a suitable location for placement cannot be found, DRPT shall consult with FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, to determine an appropriate method to interpret the historic properties to the public.

O. Main Street Station and Trainshed (DHR Inventory No. 127-0172)

1. Draft designs for platform modifications to Main Street Station and Trainshed shall be compatible with the architectural and historic character of the building and nearby historic properties and meet the guidelines set forth in the City Old and Historic District, under the auspice of the Richmond Commission of Architectural Review. DRPT shall submit draft design plans for modifications at the schematic, 30%, 65%, and 90% stages concurrently to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Richmond Commission of Architectural Review, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as

appropriate, for review and comment as described under Stipulation IV(B) and (C). The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed platform structure design in relation to the building and nearby historic properties to show proposed visual modifications.

2. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation V(C), DRPT shall create, or cause to be created through the engagement of a qualified consultant, a historic context on the evolution of the rail system in downtown Richmond. This includes acquiring archival data on the establishment of and modifications to the earliest rail lines in the city, development of the RF&P rail line and other nineteenth-century rail lines downtown, creation of the Atlantic Coast Line Railroad and the Seaboard Air Line Railroad, and the physical impacts of the different lines on downtown Richmond, including buildings, structures, and landscapes that represent this evolution. The data obtained during the research shall be compiled into a report. DRPT shall submit a draft report concurrently to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). DRPT shall disseminate the final report to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and Library of Virginia, and public libraries and historical societies for their collections; and to the other Consulting Parties upon written request.

3. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation V(C) and upon completion of the context, DRPT shall create, or cause to be created through the engagement of a qualified consultant, an abbreviated narrative on the history of the railroad in Richmond with accompanying visuals, as well as details of the Project, and post the document on a webpage deemed appropriate for the subject matter, such as the Online Exhibits page of the Valentine Museum's webpage (https://thevalentine.org/exhibitions/online/). The data can be uploaded as a stand-alone webpage or as a downloadable .pdf. The data shall remain on their webpage for a minimum of two (2) years. DRPT shall submit a draft of the webpage content concurrently to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, The Valentine, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). DRPT shall disseminate the final webpage to The Valentine for their placement on the webpage. The Valentine is under no obligation to approve the webpage. If the Valentine does not approve the webpage content to be a part of their digital programming, DRPT shall consult with FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Historic Richmond Foundation, Preservation Virginia, NTHP, and other

Consulting Parties, as appropriate, to determine an appropriate method to disseminate this data to the public.

P. Seaboard Air Line Railroad Corridor (DHR Inventory No. 127-6271)

1. Draft designs for modifications to contributing resources to the Seaboard Air Line Railroad Corridor shall be compatible with the architectural and historic character of the rail corridor and any applicable design standards for their respective localities. DRPT shall submit draft design plans for modifications at the schematic, 30%, 65%, and 90% stages concurrently to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Richmond Commission of Architectural Review, Historic Richmond Foundation, Preservation Virginia, NTHP, and other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). The design packet shall include a set of structure plans and elevations, as well as a schematic showing the proposed structure design in relation to the building and nearby historic properties to show proposed visual modifications.

2. Within four (4) years of receipt of Project construction funding in this segment as described in Stipulation (C), DRPT shall create, or cause to be created through the engagement of a qualified consultant, a historic context on railroad depots and associated facilities along the Seaboard Air Line Railroad in Virginia. This includes acquiring archival data on the history of past and present historic buildings developed as part of the Seaboard Air Line Railroad system between Richmond and the North Carolina state line.

   As part of this contextual study, DRPT shall document, or cause to be documented through the engagement of a qualified consultant, all stations and towers that are contributing elements to the Seaboard Air Line Railroad that have not been previously recorded with the Virginia SHPO. The DRPT shall prepare, or cause to be prepared, photographic documentation of each structure consistent with guidance found in “Photographic Documentation for National Park Service Basic Survey” and DHR’s “Photographic Documentation for Virginia Department of Historic Resources (DHR) Survey” (Updated 2016); and complete a Virginia SHPO Intensive Level Survey form for each recorded depot and tower in the Virginia SHPO’s VCRIS system.

   The data obtained during the contextual research and architectural study shall be documented in a written report. DRPT shall submit a draft report concurrently to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Richmond Commission of Architectural Review, Historic Richmond Foundation, Preservation Virginia, NTHP, and the other Consulting Parties, as appropriate, for review and comment as described under Stipulation IV(B) and (C). DRPT shall disseminate the final report to FRA, Virginia SHPO, City of Richmond, City of Richmond Planning and Preservation Division, Richmond Commission of Architectural Review, Historic Richmond

Foundation, Preservation Virginia, NTHP, Virginia Museum of History & Culture, Library of Virginia, and public libraries and historical societies for their collections; and to the other Consulting Parties, upon written request. Final VCRIS forms and associated packets shall be given to the Virginia SHPO at this time for their archives.

III. PROFESSIONAL QUALIFICATIONS

A. All cultural resource work carried out pursuant to this MOA shall be conducted by or under the direct supervision of an individual or individuals who meet, at a minimum, the Secretary of the Interior's Professional Qualifications Standards for Preservation Professionals (48 Fed. Reg. 44738–44739 (September 29, 1983)).

B. In preparing all archaeological studies resulting from this MOA, the preparer shall take into account ACHP's publications, *Section 106 Archaeology Guidance* (2009) and *Recommended Approach for Consultation on Recovery of Significant Information from Archeological Sites* (1999) as well as state-specific archaeological guidelines on best practice and procedure, as applicable.

C. In preparing all architectural studies resulting from this MOA, the preparer shall take into account guidelines on specific architectural projects issued by the U.S. Department of the Interior/National Park Service (such as the Bulletin entitled *How To Complete the National Register Registration Form)* and state-specific guidelines on best practices and procedures, as applicable.

IV. PREPARATION AND REVIEW OF DOCUMENTS

A. All studies, technical reports, and treatment plans prepared pursuant to this MOA shall be consistent with pertinent standards and guidelines including, as applicable, *The Secretary's Standards and Guidelines for Historical Documentation* (48 Fed. Reg. 44728-30), *The Secretary's Standards and Guidelines for Architectural and Engineering Documentation* (48 Fed. Reg. 44730-34), *Archaeology and Historic Preservation: Secretary of the Interior's Standards and Guidelines* (48 Fed. Reg. 44716-44742, September 29, 1983), ACHP's *Treatment of Archaeological Properties: A Handbook*, ACHP's *Recommended Approach for Consultation on Recovery of Significant Information from Archaeological Sites* (1999), and the Virginia SHPO's *Guidelines for Conducting Historic Resources Survey in Virginia* (October 2017), or subsequent revisions or replacements to these documents and are in accordance with 36 C.F.R. § 800.11(d) and (e) per the SEHSR PA Stipulation IV.

B. DRPT shall provide the Virginia SHPO two (2) copies (one [1] bound archival hard copies and one [1] in Portable Document Format (PDF) on compact disc or other electronic format that is acceptable to DRPT and Virginia SHPO) of all draft and final reports prepared pursuant to this MOA. DRPT shall also provide a hardcopy of any draft and final report to the Consulting Parties to this MOA unless a Consulting Party requests the material in another format acceptable to DRPT. The requesting

Consulting Party must submit such requests to DRPT in writing. DRPT shall provide a hardcopy of all final reports to all non-Consulting Party recipients as identified in the stipulations above.

C. The Virginia SHPO and the other Consulting Parties agree to provide comments on all Project plans, technical reports, treatment plans, and other documentation arising from this MOA to DRPT within thirty (30) calendar days of receipt of complete information. If DRPT does not receive comments from the Virginia SHPO or the other Consulting Parties within the thirty (30) calendar-day review period, DRPT may assume that the non-responding party has no comments. DRPT shall ensure that all comments received within the thirty (30) calendar-day review period are addressed in the final product.

D. Notwithstanding any other commitments herein to distribute documentation to FRA, DRPT shall provide FRA with a final copy of any Project plans, technical reports, treatment plans, and other documentation arising under this MOA once it has been agreed upon by Virginia SHPO and DRPT and any relevant Consulting Parties. All submissions to FRA should be in electronic format unless electronic format is not feasible or practical.

V. ANTI-DEFICIENCY ACT AND APPROPRIATIONS

A. All requirements set forth in this MOA requiring the expenditure of Federal Government funds are expressly subject to the availability of appropriated funds. Nothing in this MOA shall be interpreted to establish obligations or require payments in violation of the Anti-Deficiency Act (31 U.S.C. § 1341). DRPT shall notify the Signatories and Consulting Parties when it has acquired the funding for the Project, including funding for any phase of the project, as contemplated in Stipulation V(C).

B. All requirements set forth in this MOA requiring the expenditure of Commonwealth of Virginia funds are expressly subject to the appropriation of funds by the Virginia General Assembly, and, if applicable, the allocation of funds by the Commonwealth Transportation Board.

C. Funding sources for construction of the Project have not yet been determined. It is expected that there will be a mix of federal, state and local funding. There is a potential for funding to be available in phases. The mitigation measures for the treatment of adversely affected historic properties described in Stipulation II will apply as funding is obtained for the Project phase where each resource is physically located. There is no obligation to implement the mitigation measures identified in Stipulation II prior to receipt of funding.

D. DRPT is responsible for the successful completion and funding of any mitigation measures pursuant to Stipulation II.

VI. UNEXPECTED DISCOVERIES AND IMPACTS

A. In the event that previously unidentified archaeological resources are discovered during ground disturbing activities within the APE, but outside of the boundaries of an archaeological site that has been determined to be not eligible for the NRHP in its entirety, DRPT shall immediately halt all construction work within one-hundred (100) feet of the discovery and in the surrounding area where further subsurface resources can reasonably be expected to occur and immediately notify FRA and the Virginia SHPO of the discovery. In the case of potentially prehistoric or historic Native American sites, FRA shall also notify federally recognized Indian tribes with interest and DRPT shall notify appropriate federally recognized Indian tribes and/or Virginia Indian tribes within two (2) working days of the discovery. Notification of completion of activities shall be done in accordance with Stipulation IV pending Virginia SHPO approval of the action.

B. DRPT shall ensure that an archaeologist meeting the *Secretary of the Interior's Professional Qualification Standards* (48 FR 44739) investigates the work site and the resource within seven (7) days, and then DRPT shall forward to FRA, the Virginia SHPO, the other Consulting Parties and, if necessary, the federally recognized Indian tribes with an interest in the area and appropriate Virginia Indian tribes, an assessment of the NRHP eligibility of the resource (36 C.F.R pt. 60.4), determination of project effect, and proposed treatment actions to resolve any adverse effects on historic properties. The Virginia SHPO, the other Consulting Parties and, if participating, the federally recognized Indian tribes and the Virginia Indian tribes, shall respond within five (5) working days of receipt of DRPT's assessment of NRHP eligibility of the resource and proposed action plan. DRPT, in coordination with FRA, shall take into account the recommendations of the Virginia SHPO, the other Consulting Parties and, if participating, the federally recognized Indian tribes and the Virginia Indian tribes regarding NRHP eligibility of the resource and the proposed action plan, and then carry out the appropriate actions.

C. In the event that above-ground historic properties within the APE, but not among the 21 adversely effected historic properties listed in this MOA, are inadvertently affected during construction, DRPT shall immediately halt all construction work within fifty (50) feet of the impacted historic property and in the surrounding area, and immediately notify FRA the Virginia SHPO, and the other Consulting Parties of the issue.

D. DRPT shall ensure that an architectural historian or historic architect meeting the *Secretary of the Interior's Professional Qualification Standards* (48 Fed. Reg. 44739) investigates the work site and the historic property within seven (7) days, and then DRPT shall forward to FRA, the Virginia SHPO, and the other Consulting Parties an assessment of effect to the historic property and proposed treatment actions to resolve any adverse effects on historic properties. The Virginia SHPO and the other Consulting Parties shall respond within five (5) working days of receipt of DRPT's assessment of effect and proposed treatment actions. DRPT, in consultation with FRA, shall take into account the comments and recommendations of the

Virginia SHPO and the other Consulting Parties regarding the assessment of effect and the proposed treatment actions, and then carry out the treatment actions.

E. DRPT shall ensure that ground disturbing activities within the affected area do not proceed until the appropriate treatment measures are developed and implemented or a determination of ineligibility is made.

VII. HUMAN REMAINS

DRPT shall ensure that human skeletal remains and associated funerary objects encountered during the course of actions taken as a result of this MOA shall be treated in accordance with the Regulations Governing Permits for the Archaeological Removal of Human Remains (Virginia NRHP 390–01–02) found in Va. Code Ann. §§ 10.1–2305, *et seq.*, the Virginia Antiquities Act as well as ACHP's "Policy Statement Regarding Treatment of Burial Sites, Human Remains, and Funerary Objects" adopted on February 23, 2007. DRPT shall obtain a permit from the Virginia SHPO for the removal of human remains in accordance with the regulations stated above, as appropriate.

VIII. USE OF MOA BY OTHER FEDERAL AGENCIES

In the event that a Federal agency other than FRA is considering funding, permits, licenses, or approvals for the Project, such Federal agency may become a signatory to this MOA as a means of complying with its responsibilities under Section 106 for its undertaking relating to the Project. To become a signatory to this MOA, the agency official must provide written notice to the Signatories that the agency agrees to the terms of the MOA, specifying the extent of the agency's intent to participate in the MOA. The participation of the agency is subject to approval by the Signatories, who must respond to the written notice within thirty (30) days or the approval will be considered implicit. Any necessary amendments to the MOA as a result will be considered in accordance with Stipulation X.

IX. DISPUTE RESOLUTION

A. Should any Signatory, Consulting Party, or member of the public object in writing to FRA regarding any action carried out or proposed with respect to any undertakings covered by this MOA, or to the implementation of this MOA, FRA shall notify the other Signatories of the objection and consult with the objecting party to attempt to resolve the objection within thirty (30) days of receipt of the written objection.

B. If after initiating such consultation, FRA determines within the thirty (30) day period in subparagraph (A) of this Stipulation IX that the objection cannot be resolved through consultation with the objecting party, FRA shall then consult with all Signatories to resolve the objection. If the objection still cannot be resolved within thirty (30) days of all Signatories being advised of the objection and so consulted, FRA shall then forward all documentation relevant to the objection to ACHP, including a proposed response to the objection, and request ACHP's comment on the objection as described in subsection (C) of this Stipulation IX.

C. When forwarding relevant documentation and a proposed response to ACHP, FRA shall request that within thirty (30) days after receipt ACHP exercise one of the following options:

1. Advise FRA that ACHP concurs with FRA's proposed response to the objection, whereupon the FRA shall respond to the objecting party accordingly; or

2. Provide FRA with one (1) or more ACHP recommendations for resolving the objection, which FRA shall take into account in reaching a final decision regarding its response to the objection, which it shall render within ten (10) days of receiving ACHP's recommendation(s).

D. Should ACHP not exercise one (1) of the above options within thirty (30) days after receipt of all pertinent documentation and proposed response, FRA may make a final decision on the dispute and proceed accordingly.

E. FRA shall take into account any ACHP recommendation provided in accordance with this Stipulation IX with reference only to the subject of the objection. FRA's responsibility to carry out all other actions under this MOA that are not the subject of an objection made pursuant to this Stipulation IX shall remain unchanged.

F. At any time during implementation of the measures stipulated in this MOA should an objection pertaining to this MOA be raised by a member of the public, FRA shall notify the Signatories to this MOA and take the objection into account, consulting with the objector and with the Signatories to this MOA in an effort to resolve the objection to follow the SEHSR PA Stipulation XI.B.

X. AMENDMENTS

Any Signatory to this MOA may propose to FRA that the MOA be amended, whereupon FRA shall consult with the other Signatories to consider such an amendment. All Signatories to the MOA must agree to the proposed amendment in accordance with 36 C.F.R. § 800.6(c)(7).

XI. TERMINATION

A. If any Signatory to this MOA determines that its terms will not or cannot be carried out, that party shall immediately consult with the other Signatories to attempt to develop an amendment per Stipulation X, above. If within thirty (30) days (or another time period agreed to by all signatories) an amendment cannot be reached, any signatory may terminate the MOA upon written notification to the other signatories. Once the MOA is terminated, and prior to work continuing on the undertaking, FRA must either (a) execute an MOA pursuant to 36 CFR § 800.6 or (b) request, take into account, and respond to the comments of the ACHP under 36

CFR § 800.7. FRA shall notify the signatories as to the course of action it will pursue.

B. If FRA and DRPT decide they shall not proceed with the Project, they shall so notify the other Signatories and Consulting Parties in writing, and this MOA shall become null and void.

C. If FRA, DRPT, Virginia SHPO, or ACHP determines that they cannot implement the terms of this MOA, or if the Virginia SHPO or ACHP determines that this MOA is not being properly implemented, FRA and DRPT jointly, or the Virginia SHPO or ACHP individually, may propose to the other parties that this MOA be amended or terminated.

D.Termination shall include the submission of a technical letter report to the Virginia SHPO by DRPT, in coordination with FRA, on any work done up to and including the date of termination. DRPT shall ensure that any associated collections and records recovered are curated in accordance with state guidelines.

XI. EFFECTIVE DATE

This MOA shall be effective as of the date of the last signature of the Signatories.

XII. DURATION

This MOA shall continue in full force and effect for fifteen (15) years after the effective date. At any time in the six (6)-month period prior to the expiration of that initial term, the Signatories may consult to consider extending or modifying this MOA. No extension or modification shall be effective unless all Signatories to the MOA have agreed to it in writing. Any extension or modification of this MOA shall be in accordance with Stipulation X.

XIII. NO WAIVER OF SOVEREIGN IMMUNITY

Nothing in this MOA shall be deemed a waiver of a Signatory’s sovereign immunity.

XIV. EXECUTION

This MOA may be executed in counterpart. FRA shall ensure that each of the Signatories is provided a copy of the executed MOA.

Execution of this MOA by FRA, ACHP, DRPT, and the Virginia SHPO, and its submission to ACHP pursuant to 36 C.F.R § 800.6(c), is evidence that FRA has afforded ACHP an opportunity to comment on the proposed Project and its effects on historic properties, and that FRA has taken into account the effects of the Project on historic properties.

APPENDIX A: List of Cultural Resource Reports Completed on the DC2RVA Project Area

Archaeological Sites/Resources (in publication order)

Klein, Mike, Emily Calhoun, Marco González, and Earl E. Proper
2015 *Archaeological Background Review and Predictive Model for the Washington, D.C. to Richmond, Virginia, Southeast High Speed Rail Corridor*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

McCloskey, Kevin, Earl Proper, Curtis McCoy, Emily Calhoun, Morgan MacKenzie, and Joseph Blondino
2016 *Phase IB Archaeological Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Rosslyn to Alexandria (ROAF) through Buckingham Branch/Hospital Wye (BBHW) Segments*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

McCloskey, Kevin, Emily Calhoun, Kerry González, and Mike Klein
2018 *Phase IB Archaeological Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Preferred Alternative Limits of Disturbance*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Buildings, Structures, Objects, and Districts (in publication order)

Staton, Heather Dollins, and Adriana Lesiuk
2015 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Dahlgren Junction to Fredericksburg (DJFB) Segment, City of Fredericksburg and Stafford County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Staton, Heather Dollins, Adriana Lesiuk, and M. Chris Manning
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Arkendale to Dahlgren Junction (ARDJ) Segment Stafford County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Staton, Heather D., Adriana T. Lesiuk, and Emily K. Anderson
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Rosslyn to Alexandria (ROAF) Segment Arlington County and the City of Alexandria*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Staton, Heather Dollins, Adriana T. Lesiuk, Emily K. Anderson, and Earl P. Proper
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Alexandria to Franconia (AFFR) Segment City of Alexandria and Fairfax County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Manning, M. Chris, Earl Proper, Adriana Lesiuk, and Heather Dollins Staton
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Franconia to Lorton (FRLO) Segment Fairfax County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Staton, Heather Dollins, M. Chris Manning, and Adriana Lesiuk
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Lorton to Powells Creek (LOPC) Segment Prince William and Fairfax Counties*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Anderson, Emily K., and Heather D. Staton
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Fredericksburg to Hamilton (FBHA) and Hamilton to Crossroads (HAXR) Segments, Spotsylvania County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Manning, M. Chris, and Michelle Salvato
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Crossroads to Guinea (XRGU), Guinea to Milford (GUMD), and Milford to North Doswell (MDND) Segments Spotsylvania, Caroline, and Hanover Counties*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Lesiuk, Adriana T., and M. Chris Manning
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Elmont to Greendale (ELGN) Segment, Hanover and Henrico Counties*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Sylvester, Caitlin C., and Heather D. Staton
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Greendale to SAY/WAY (GNSA), SAY/WAY to AM Jct (SAAM) and Buckingham Branch/Hospital Wye (BBHW) Segments, Henrico County and City of Richmond*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Anderson, Emily K., and Heather D. Staton
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project AM Jct to Centralia - S Line (AMCE) and AM Jct to Fulton Yard (AMFY) Segments, City of Richmond and Chesterfield County.* DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Lesiuk, Adriana T., and Heather D. Station
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project WAY to Centralia – A Line (WACE) Segment, Chesterfield County and City of Richmond*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Peckler, Danae
2016 *Architectural Reconnaissance Survey for the Washington, D.C. to Richmond, Virginia High Speed Rail Project North Doswell to Elmont (NDEL) Segment, Hanover County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Chase, Kristine A.
2017 *Architectural Reconnaissance Survey of Structures for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Rosslyn to Alexandria (ROAF) through Buckingham Branch/Hospital Wye (BBHW) Segments*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Moss, Adriana T., and Kerri S. Barile
2018 *Addendum: Architectural Reconnaissance Survey of the LOD Expansion Area for the Washington, D.C. to Richmond, High Speed Rail Project, Arlington, Caroline, Chesterfield, Hanover, Henrico, Fairfax, Prince William, Stafford, and Spotsylvania Counties and the Cities of Alexandria, Fredericksburg, and Richmond, Virginia*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Barile, Kerri S., Kristine A. Chase, Sean Maroney, Adriana T. Moss, Danae Peckler, and Heather Dollins Staton
2018 *Architectural Intensive Investigations for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project (Report A).* DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Barile, Kerri S., Melissa Butler, Adriana T. Moss, Danae Peckler, Heather Dollins Staton, Caitlin Sylvester, and Lenora Wiggs
2018 *Architectural Intensive Investigations for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project (Report B).* DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Barile, Kerri S., Melissa Butler, Adriana T. Moss, Heather Dollins Staton, Caitlin Sylvester, and Lenora Wiggs
2018 *Architectural Intensive Investigations for the Washington, D.C. to Richmond Southeast High Speed Rail (DC2RVA) Project (Report C)*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Combined Cultural Resources/Reconnaissance Studies (in publication order)

Staton, Heather Dollins, and Earl E. Proper
2016 *Archaeological and Architectural Phase IA Study for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Ashland Bypass (ASBP) Segment, Hanover County*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

Staton, Heather Dollins, D. Brad Hatch, and Emily Calhoun
2017 *Archaeological and Architectural Phase IA Study for the Washington, D.C. to Richmond, Virginia High Speed Rail Project Fredericksburg Bypass (FBBP) Segment, Stafford, Caroline, and Spotsylvania Counties*. DC2RVA Project Team/Dovetail Cultural Resource Group, Fredericksburg, Virginia.

APPENDIX C: Meetings and Correspondence with Consulting Parties

Meetings

Date	Attendees	Topics
November 7, 2014	DHR, DRPT	Kick-off meeting; discussions on APE, methodology, reporting
March 19, 2015	VDOT, DRPT	Roadway bridges and Section 106 coordination
February 18, 2016	DHR, DRPT	Update on corridor and status of studies
June 14, 2016	CWT	General discussion on results to date; Richmond to Raleigh Memorandum of Agreement
August 10, 2016	DHR, DRPT	Preliminary dialogue on historic properties and Project effect
May 15, 2017	Ashland Museum, Town of Ashland	Overview of 106 process and technical studies to date
June 8, 2017	NPS- Fredericksburg, DRPT	Update on technical studies and Project plans
July 14, 2017	Town of Ashland; Ashland Museum	Update on technical studies and Project plans
July 26, 2017	DHR, DRPT	Update on technical studies and Project schedule
August 14, 2017	NPS—Richmond, DRPT	Update on technical studies and Project plans
October 11, 2017	Hanover County, Town of Ashland, Ashland Museum	Update on technical studies and Project plans
October 20, 2017	Alexandria Archaeology, City of Alexandria, Arlington County, NTHP, DRPT	Update on technical studies and Project plans
October 24, 2017	ACHP, ABPP, CWT, DRPT	Update on technical studies and Project plans
October 27, 2017	Prince William County, Caroline County, City of Fredericksburg, CVBT, HFFI, DRPT	Update on technical studies and Project plans
October 30, 2017	City of Richmond, Historic Richmond Foundation, DRPT	Update on technical studies and Project plans
February 8, 2018	Rose Center/Urban Land Institute, DRPT	Overview of Project and history of Shockoe Bottom
February 13, 2018	DHR, DRPT	Update on technical studies and Project schedule
April 4, 2018	DHR, DRPT	Discussion of Project limits of disturbance and APE
June 18, 2018	Town of Ashland, Ashland Museum	Historic property list and 106 process
June 19, 2018	DHR, DRPT	Historic properties and Project effect
June 21, 2018	CWT, Historic Richmond Foundation, Town of Ashland, Ashland Museum, Preservation Virginia, DRPT	Historic properties and Project effect
June 26, 2018	ABPP, City of Fredericksburg, NPS Fredericksburg, DRPT, FRA	Historic properties and Project effect
June 28, 2018	NTHP, Alexandria Archaeology, NPS—Mount Vernon Parkway, ACHP, DRPT	Historic properties and Project effect
July 2, 2018	DHR, FRA, DRPT	Revisit of historic properties and Project effect
July 16, 2018	Town of Ashland, Ashland Museum	Technical reports and Project effect

Date	Attendees	Topics
July 17, 2018	NPS- Fredericksburg	DC2RVA LOD and Jackson's Shrine
July 17, 2018	Preservation Virginia	DC2RVA Project summary and list of historic properties
July 19, 2018	City of Richmond, DRPT	Historic properties and Project effect
July 24, 2018	DHR	Resources in Shockoe Bottom
July 26, 2018	FRA, DHR, DRPT	Resources in Shockoe Bottom
July 27, 2018	ACHP	Resources in Shockoe Bottom
July 31, 2018	DHR, FRA, DRPT	Resources in Shockoe Bottom
August 3, 2018	DHR	Resources in Shockoe Bottom
August 6, 2018	DHR, DRPT, VA Secretary of Transportation, VA Secretary of Natural Resources	Discussion on historic resources in Shockoe Bottom
August 29, 2018	City of Richmond, DHR	Resources in Shockoe Bottom, City preservation initiatives near Main Street Station and future projects
September 5, 2018	VA Secretary of Transportation, DHR, DRPT, City of Richmond	Discussion of cultural resources in Shockoe Bottom
September 10, 2018	NTHP, Preservation Virginia, Sacred Ground Project, ACHP, DHR, DRPT	Discussion of upcoming meeting in Shockoe/Richmond, including meeting content and attendees
October 2, 2018	FRA, DHR, ACHP, DRPT	Summary of three October 2018 consulting party meetings, Resources in Shockoe Bottom, Next steps in 106 process
October 2, 2018	DRPT, City of Alexandria	List of historic properties, project effect
October 4, 2018	City of Fredericksburg, Prince William County, Ashland Museum, Alexandria Archaeology, DRPT, FRA	APE, list of historic properties, project effects, MOA mitigation
October 5, 2018	American Battlefield Trust (Civil War Trust), ABPP, Alexandria Archaeology, NPS- Mount Vernon Parkway, NPS- National Capital Region	APE, list of historic properties, project effects, MOA mitigation
October 12, 2018	NTHP, Shockoe Partnership, ACHP, Preservation Virginia, City of Richmond, Slave Trail Commission, Historic Richmond Foundation, Untold RVA, DHR, FRA, DRPT, private citizens	On-site visit at Main Street Station, APE, list of historic properties, project effects, MOA mitigation
October 15, 2018	Historic Richmond Foundation, DRPT	Resources in Shockoe Bottom, list of historic properties, project effect, MOA mitigation
October 23, 2018	ACHP, DHR, FRA, DRPT	Update on consulting party meetings, list of historic properties, project effect
October 24, 2018	Ashland Museum, Town of Ashland, DRPT	List of historic properties, project effect, MOA mitigation
November 1, 2018	Preservation Virginia, DRPT	Resources in Shockoe Bottom, list of historic properties, project effect, MOA mitigation
November 2, 2018	Elegba Folklore Society, DRPT	Summary of project, Resources in Shockoe Bottom, list of historic properties, project effect, MOA mitigation

Date	Attendees	Topics
November 28, 2018	NTHP, DRPT	Discussion on reply sent to NTHP on Historic Properties
December 3, 2018	NTHP, Preservation Virginia, Historic Richmond Foundation, Elegba Folklore Society, City of Richmond, DRPT, FRA, ACHP, DHR	Additional discussion on reply sent to NTHP, historic properties in Shockoe Bottom, and effect on historic properties

Correspondence Sent to Consulting Parties

Date	Medium	Recipient	Topic
September 25-October 15, 2014	E-mail; Letter	DHR, FRA, DRPT	Initiation of Section 106 Process
January 5- February 2, 2015	E-mail, Letter	DHR, FRA, DRPT	Defining Project APE
June 8, 2015	E-mail	VDOT	VDOT/DHR PA on Historic Bridges
June 22, 2015	Letter	Civil War Trust, DRPT	Receipt of comments on Project screening review
July 30, 2015	E-mail	All Consulting Parties, DRPT	Distribution of Archaeological Predictive Model report for review
July 17, 2015; August 28, 2015	Letter, E-mail	DHR	Submittal of Archaeological Predictive Model Report; DHR Reply
August 3- September 4, 2015	E-mail	Arlington County, City of Alexandria, Prince William County, City of Fredericksburg, DRPT	Receipt of comments on Archaeological IA Predictive model
August 28, 2015	E-mail	All Consulting Parties, DRPT	Reminder to submit comments on Predictive Model Report
October 20, 2015; December 18, 2015	Letters	NPS (FSNMP)	*Archaeological Resources Protection Act* (ARPA) permit to dig on federal land (Original Segment 7)
December 9, 2015; February 5,2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 7); DHR Reply
December 15, 2015	Letter	DHR	Application to conduct archaeology on state lands (Original Segment 11)
March 18-31, 2016	E-mail; Memo	DHR	Discussion of alternative methodology for architecture in Original Segment 18
April 13- April 26, 2016	E-mail	David Hamilton (Consulting Party), DHR, DRPT, FRA	Mr. Hamilton is a private property owner along the Ashland Bypass. Numerous E-mails were exchanged with Mr. Hamilton regarding his concerns, his position as a consulting party, and distributing Project data
May 20, 2016; June 8, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 6); DHR reply
May 31, 2016; June 22, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 3); DHR reply
May 31, 2016; June 22, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 4); DHR reply
June 21, 2016; June 28, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segments 8-9); DHR reply
July 6, 2016; July 22, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 1); DHR reply

Date	Medium	Recipient	Topic
July 6, 2016; July 15, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 2); DHR reply
July 25, 2016; August 15, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segments 10-12); DHR reply
December 21, 2016; February 21, 2017	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 13); DHR reply
August 3, 2016; August 22, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 14); DHR reply
September 6, 2016; October 11, 2016	Letter, E-mail	DHR	Submittal of Archaeological Phase I Report (Original Segments 1-20); DHR reply
October 21, 2016; November 30, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segments 15, 16, 20); DHR reply
November 14, 2016; December 22, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segments 17, 19); DHR reply
October 21, 2016; November 3, 2016	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Original Segment 18); DHR reply
January 20, 2017; March 1, 2017	Letter, E-mail	DHR	Submittal of Architectural Phase I Report (Structures); DHR reply
January 6, 2017; February 3, 2017	Letter, E-mail	DHR	Submittal of Phase IA Ashland Bypass Report; DHR reply
January 20, 2017; February 3, 2017	Letter, E-mail	DHR	Submittal of Phase IA Fredericksburg Bypass Report; DHR reply
February 24, 2017; March 24, 2017	E-mail	All Consulting Parties	Distribution of Architectural Reports for review; Consulting Party comments
March 28, 2017	E-mail	All Consulting Parties	Update on technical study distribution
April 14, 2017; May 14, 2017	Letter; E-mail	All Consulting Parties	Distribution of All Phase IA and IB reports for review; Consulting Party comments
May 17, 2017	E-mail	All Consulting Parties	Reminder of comment deadline for reports
June 1, 2017	E-mail	All Consulting Parties	Extension of deadline for comments on reports
September 19, 2017	E-mail	All Consulting Parties	Summary of upcoming Draft EIS meetings and offer for on-on-one meetings
October 7, 2017	E-mail	All Consulting Parties	Reminder of Draft EIS meetings
November 2, 2017	E-mail	All Consulting Parties	Distribution of historic map overlays showing Shockoe Bottom
November 21, 2017	Letter; E-mail	Professor J.V. Moeser, Secretary of Transportation	Resources in Shockoe Bottom
February 7, 2018	E-mail	All Consulting Parties	Update on LOD and technical studies progress
February 13, 2018	Letter; Email	Tribes who received federal status in 2018	Invitation to participate in project; Updates on project to date and future steps (Tribes were included on all subsequent All Consulting Party communication)
May 8, 2018	E-mail	All Consulting Parties	Update on distribution of LOD and Phase II technical reports
May 14, 2018; June 12, 2018	E-mail	DHR	Submittal of Archaeological LOD Expansion Areas Report; DHR reply
May 17, 2018; July 20, 2018	E-mail	All Consulting Parties	Distribution of Archaeological LOD Expansion Areas Report for review; Consulting Party comments
May 4, 2018; June 11, 2018	E-mail	DHR	Submittal of Architectural LOD Expansion Areas Report for review; DHR reply
May 17, 2018; July 20, 2018	E-mail	All Consulting Parties	Distribution of Architectural LOD Expansion Areas Report for review; Consulting Party comments

Date	Medium	Recipient	Topic
March 22, 2018; April 25, 2018	E-mail	DHR	Submittal of Architectural Phase II Report A; DHR reply
April 19, 2018; May 1, 2018	E-mail	DHR	Submittal of Architectural Phase II Report B; DHR reply
May 10, 2018; June 12, 2018	E-mail	DHR	Submittal of Architectural Phase II Report C; DHR reply
May 17, 2018; July 20, 2018	E-mail	All Consulting Parties	Distribution of Architectural Phase II Reports (A-C) for review; Consulting Party comments
June 13, 2018	E-mail	All Consulting Parties	Reminder of upcoming series of Project meetings
June 20, 2018; June 28, 2018	Letter, E-mail	DHR	Submittal of Project effects letter; DHR reply
June 20, 2018	E-mail	All Consulting Parties	Update on Project effects and reminder of upcoming series of Project meetings
July 9, 2018; July 18, 2018	Letter; E-mail	DHR	Submittal of Addendum Project effects letter; DHR reply
July 9, 2018	E-mail	All Consulting Parties	Update on Addendum Project Effects
July 20, 2018	E-mail	All Consulting Parties	Reminder of deadline for report and effects comments
August 14, 2018	E-mail	FRA, DHR, DRPT	Framework of MOA for review
August 23, 2018	E-mail	All Consulting Parties	Update on project including receipt of comments on reports, APE, and list of historic properties
September 21, 2018	E-mail	All Consulting Parties	Invitation to three October Consulting Party Meetings
September 21, 2018	E-mail	Shockoe Bottom Neighborhood Assn; Historic Shockoe Partnership; Slave Trail Commission; Elegba Folklore Society; Black History Museum Virginia Untold VA; Virginia African American Cultural Resources Task Force; Southern Environmental Law Center; Sacred Ground Project; Community Unity in Action, Richmond Branch NAACP; Wesley Memorial United Methodist Church; VCU Department African American Studies; Richmond Crusade for Voters; First Unitarian Universalist Church; Sacred Ground Historical Reclamation Project; VCU, Building on Sacred Ground	Invitation to Shockoe Bottom/Richmond Consulting Party Meeting
October 11, 2018	E-mail	All Consulting Parties	Reminder of three October Consulting Party Meetings

APPENDIX L

PREFERRED ALTERNATIVE MAPBOOK

D.C. TO RICHMOND SOUTHEAST HIGH SPEED RAIL

Appendix L

PREFERRED ALTERNATIVE MAPBOOK

This appendix provides a detailed mapbook of the Preferred Alternative for the 123-mile Project corridor, including permanent and temporary limits of disturbance (LOD) from which the environmental impacts were evaluated, as described in Chapter 4 of the Final Environmental Impact Statement (EIS). The LOD is defined as the boundary within which all construction, materials storage, grading, landscaping, and related activities will occur. The permanent LOD include all areas where Project infrastructure will physically replace existing conditions and will not be restored after completion of construction. Temporary LOD are areas required for construction of the Preferred Alternative, such as for construction access or staging and storage of equipment, that will temporarily modify the existing conditions, but will be restored after completion of construction. In general for the Preferred Alternative, permanent LOD are 0 to 40 feet outside of the existing CSXT railroad right-of-way, with a maximum offset of 650 feet for station improvements. Temporary LOD are generally 10 to 15 feet outside of the permanent LOD, with a maximum offset of 50 feet.

This appendix presents the same elements as the mapbooks from Appendices C through H of the Draft EIS for the 23 Build Alternatives, but reflects the LOD of the Preferred Alternative, including any changes to the proposed design components between the Draft and Final EIS. The LOD changes are the result of design refinements that were made subsequent to publication of the Draft EIS in response to public and agency comments on the Draft EIS or from refined data (i.e., new data and/or changes to the data that were previously available).

The Preferred Alternative is based on conceptual engineering, which is approximately a 10 percent level of design and is appropriate for decisions to be made during the National Environmental Policy Act (NEPA) process. The conceptual engineering will be further refined during future design phases of the Project (refer to Chapter 7 of the Final EIS for details).

The mapbook is created at a scale of 1 inch equal to 200 feet when printed at tabloid size (11 by 17). The basemap aerial imagery for the Project corridor is from the "Most Recent Imagery" service provided by the Virginia Geographic Information Network (VGIN) Virginia Base Mapping Program (VBMP), dating between 2015 and 2017.

The following components are included within this mapbook appendix:

- Permanent Limits of Disturbance (LOD)
- Temporary (Construction) Limits of Disturbance (LOD)
- Jurisdictional Boundaries
- Parcel Boundaries, from County/City Parcel Data

- CSXT Right-of-Way, from County/City Parcel Data
- CSXT Mileposts
- CSXT Control Points and Interlockings
- Existing Track
- Proposed Track
- Improve Existing Tracks to Increase Speeds
- Track Proposed by Others
- Track to be Removed
- Proposed Crossovers/Turnouts
- Crossover/Turnouts Proposed by Others
- Crossover/Turnouts to be Removed
- Proposed Retaining Walls
- Retaining Walls Proposed by Others
- Proposed Bridges
- Bridges Proposed by Others
- Proposed Roadway Improvements, including Edge of Pavement and Roadway Centerlines
- Symbols indicating Proposed Crossing Improvements at Existing At-Grade Crossings: Closure, Grade Separate, Four Quad Gates, Median Treatment, or Locking Gates
- Proposed Stormwater Management Facilities
- Proposed Drainage Culvert Crossings
- Station Locations
- Existing Station Platforms
- Proposed Station Platforms
- Station Platforms Proposed by Others
- Proposed Station Buildings/Structures

DC TO RICHMOND
SOUTHEAST HIGH SPEED RAIL

APPENDIX M

UPDATED ENVIRONMENTAL RESOURCE MAPBOOKS

D.C. TO RICHMOND SOUTHEAST HIGH SPEED RAIL

Appendix M

UPDATED ENVIRONMENTAL RESOURCE MAPBOOKS

The Draft Environmental Impact Statement (EIS)[1] presented mapping of environmental resources in Chapter 3 (Affected Environment), Chapter 4 (Environmental Consequences), and throughout its technical appendices. This appendix presents updates to the environmental consequences mapping for those resources that have changed since the publication of the Draft EIS, based on the Final EIS limits of disturbance (LOD)[2] for the Preferred Alternative.

- If an updated map is not presented herein, a reference is given to the appropriate section(s) of the Draft EIS where the reader can find the original figures or mapbooks.
- The majority of the mapping of environmental resources in the Draft EIS either did not show the Project LOD, or were presented at a scale where the minor changes in LOD since the publication of the Draft EIS (as described in Chapter 4 of this Final EIS) are not discernable. Additionally, some mapping was specific to Build Alternatives that are not part of the Preferred Alternative. Accordingly, these maps are not reproduced herein as the original mapping remains accurate or no longer relevant.

The updated Preferred Alternative mapbook, which shows the LOD and related engineering improvements, is presented separately in Appendix L of the Final EIS and does not include any environmental resources or their Project impacts.

Below is the list of environmental resources, as presented in order in Chapter 5 of the Final EIS, with the locations of where to find related mapping noted. **The mapping of environmental resources that is updated in the Final EIS, whether in this appendix or other locations, are emphasized in bold text on the following pages.** For environmental resources that did not need to be updated, the reader can use Appendix L in a side-by-side comparison with the resource mapping from the Draft EIS, as referenced below, to view the Preferred Alternative LOD relative to the locations of existing environmental resources.

---

[1] The Draft EIS for the DC2RVA Project was published on September 8, 2017, and is available on the Project website: http://dc2rvarail.com/draft/

[2] Physical impacts to environmental resources are estimated within the LOD, which are defined as the boundary within which all construction, materials storage, grading, landscaping, and related activities will occur. Refer to the introduction of Chapter 5 of the Final EIS for full details.

Water Resources (Final EIS Section 5.1)

- **Surface waters/major rivers, streams, wetlands, Chesapeake Bay Resource Protection Areas (RPAs), and impaired waters: Refer to this Final EIS Appendix M1 for an updated mapbook showing the Preferred Alternative impacts**
- Watershed boundaries: Refer to Draft EIS Figure 3.1-1
- Floodplains and impaired waters: Refer to Draft EIS Figure 3.1-3
- Virginia's Coastal Zone: Refer to Draft EIS Appendix M, Figure 3-3

Topography, Geology, and Soils (Final EIS Section 5.2)

- Physiographic Provinces: Refer to Draft EIS Figure 3.2-1

Agricultural Lands (Final EIS Section 5.3)

- Farmland Soils: Refer to Draft EIS Appendix N, Figure N-2 mapbook, for mapping of Prime Farmlands and Farmlands of Statewide Importance
- Agricultural and Forestal Districts: Refer to Draft EIS Figure 3.3-1 (note that this resource only occurred in Build Alternatives 5C and 5C-Ashcake, which are not part of the Preferred Alternative)

Mineral Resources (Final EIS Section 5.4)

- Mines and Mineral Resources: Refer to Draft EIS Figure 3.4-1 (note that this resource only occurred in Build Alternative 3C, which is not part of the Preferred Alternative)

Solid Wastes and Hazardous Materials (Final EIS Section 5.5)

- **Hazardous Materials Impacts: Refer to this Final EIS Appendix M2 for an updated mapbook showing the Preferred Alternative impacts**
- Hazardous Materials Sites: Refer to Draft EIS Appendix O, Figure O-1 mapbook

Air Quality (Final EIS Section 5.6)

- NAAQS Nonattainment Areas: Refer to Draft EIS Figure 3.6-1

Noise and Vibration (Final EIS Section 5.7)

- Noise:
  - Refer to Draft EIS Figure 3.7-2 for Noise Measurement Locations
  - Refer to Draft EIS Appendix P (Noise and Vibration Technical Report) for Noise Impacts and Impact Contour Mapbook attachments, as follows:
    - Attachment A, Noise Analysis Area 1
    - **Attachment B, Noise Analysis Area 2; refer to this Final EIS Appendix M3 for an updated Sheet 1 (Crystal City)**
    - Attachment C, Noise Analysis Area 3A & 3B (includes Preferred Alternative 3B)
    - Attachment E, Noise Analysis Area 4
    - Attachment F, Noise Analysis Area 5A, 5B, & 5D (includes Preferred Alternative 5A)
    - **Attachment N, Noise Analysis Area 6F; refer to this Final EIS Appendix M3 for an updated Sheet 4 (Hermitage Road)**

- Vibration: There are no changes to the vibration impacts mapping as presented in Draft EIS Appendix P (Noise and Vibration Technical Report). For Vibration Impacts and Impact Contours, refer to the Appendix P Mapbook attachments, as follows:
  - There are no vibration-sensitive receptors within Area 1
  - Attachment P, Vibration Analysis Area 2
  - Attachment Q, Vibration Analysis Areas 3A & 3B (includes Preferred Alternative 3B)
  - Attachment S, Vibration Analysis Area 4
  - Attachment T, Vibration Analysis Areas 5A, 5B, & 5D (includes Preferred Alternative 5A)
  - Attachment W, Vibration Analysis Areas 6B-S Line, 6D, 6F, 6G (includes Preferred Alternative 6F)

Aesthetic and Visual Environment (Final EIS Section 5.9)

- Refer to Draft EIS Section 3.9 for maps and photos related to the visual environment

Biological Resources (Final EIS Section 5.10)

- **Submerged Aquatic Vegetation: Refer to this Final EIS Appendix M4 for an updated mapbook showing the Preferred Alternative impacts**
- **Bald Eagle Nests: Refer to this Final EIS Appendix M5 for an updated mapbook showing the Preferred Alternative impacts**
- EcoRegions: Refer to Draft EIS Figure 3.10-1
- Designated Wildlife Areas: Refer to Draft EIS Figure 3.10-2
- Anadromous Fish Waters: Refer to Draft EIS Appendix M, Figure 3-8

Community Resources (Final EIS Section 5.11)

- Community Facilities: Refer to Draft EIS Appendix Q (Community Impact Assessment Technical Report), Figure 3-1

Title VI and Environmental Justice (Final EIS Section 5.12)

- **Environmental Justice Census Tracts: Refer to this Final EIS Appendix M6 for an updated mapbook showing the Preferred Alternative impacts**

Archaeological/Aboveground Cultural & Historic Resources (Final EIS Section 5.13)

- **Refer to Appendix D of the Final EIS for the updated cultural resource reports and summaries, which includes locations of the 120 properties that were identified in the Area of Potential Effects (APE) for the Preferred Alternative, including those that have been identified since the publication of the Draft EIS**
- **Refer to Chapter 6 of the Final EIS for maps of the historic properties that are adversely affected by the Project**

Parklands, Recreational Areas, and Refuges (Final EIS Section 5.14)

- **Refer to Appendix A of the Final EIS for an updated Draft EIS Figure 3.14-1 mapbook**
- **Refer to Chapter 6 of the Final EIS for maps of parks that were considered during the Section 4(f) Evaluation for the Project**

Transportation Facilities (Final EIS Section 5.15)

- **Public and Private At-Grade Crossing Improvements: Refer to Appendix L of the Final EIS, which includes symbology of proposed crossing treatments as part of the Preferred Alternative for the Project**

The following environmental resource areas do not have any maps associated with them, either in the Draft or Final EIS:

- Energy (Final EIS Section 5.8)
- Utilities (Final EIS Section 5.16)
- Safety and Security (Final EIS Section 5.17)
- Construction Impacts (Final EIS Section 5.18)
- Indirect and Cumulative Impacts (Final EIS Section 5.19)
- Relationship between Short-Term Impacts and Long-Term Benefits (Final EIS Section 5.20)
